graduate port engineers and presents a wide variety of port subjects for practicing engineers. It covers almost all topics related to port engineering in a fundamental way including dredging, marine aids to navigation, environmental issues, containers, liquid bulk, dry bulk, general cargo, multipurpose, roll on roll off (Ro-Ro), fishing and ferry terminals. Discussions are targeted at a conceptual design level. Other features: Aspects of port engineering are discussed including shipping, maritime trade, environmental aspects such as climate change, resilience of ports, nature based solutions and port management such as security, equipment, slurry pumping and so forth. Illustrates the design of port terminals. Discusses site selection for a new port, the factors to be considered and ways to compare different potential port sites. Explores asset management and repair of marine structures. Includes case studies from around the world, examples and practical and user friendly guidelines.

**Project of China** Jianfeng Xu, Fuhui Sun, Qiwei Chen, 2022-06-30 This book discusses the overall development and use of smart courts from the perspective of system of systems engineering (SoSE) and its methodology. It analyzes the relationships between the components, structures, environments and functions of various systems and illustrates the basic approaches to system design, specification, integration, operation and management. As the general introductory book of the China Smart Court Development Series, this book provides an overview of the development of Chinese people's courts in the application of information technology over the past two decades and outlines the key areas of exploration in the Smart Court SoSE project centered on the development practices during the 13th Five Year Plan period. It also forecasts the future development and evolution of the smart court information system. The key topics introduced in the book including the overall design of complex information systems, integrated interconnection networks, based system integration, judicial big data, quality control and analytics services, various types of AI enabled judicial services, quality and efficiency oriented operation and maintenance services for large scale information systems etc. all came from the basic research of information science and theories as well as the systems engineering practices of the Smart Court SoSE project. They not only reflect the latest findings on systems engineering and architecture methods in China and overseas but also reveal many innovative approaches to SoSE methods and paradigms which can be used for the design and continued development of smart courts at a new and higher starting point. It is believed that they can also serve as good examples and reference points for the development in IT application and complex information systems engineering in other sectors.      **Monthly Bulletin** New York Chamber of Commerce, 1915
