Estimating How the Macroeconomy Works Ray C. FAIR, Ray C Fair, 2009-06-30

Macroeconomics tries to describe and explain the economywide movement of prices output and unemployment The field has been sharply divided among various schools including Keynesian monetarist new classical and others It has also been split between theorists and empiricists Ray Fair is a resolute empiricist developing and refining methods for testing theories and models The field cannot advance without the discipline of testing how well the models approximate the data Using a multicountry econometric model he examines several important questions including what causes inflation how monetary authorities behave and what are their stabilization limits how large is the wealth effect on aggregate consumption whether European monetary policy has been too restrictive and how large are the stabilization costs

to Europe of adopting the euro He finds among other things little evidence for the rational expectations hypothesis and for the so called non accelerating inflation rate of unemployment NAIRU hypothesis He also shows that the U S economy in the last half of the 1990s was not a new age economy **IMF Staff Papers, Volume 49, No. 1** Mr.Robert P. Flood,2002-04-18 This paper presents details of a symposium on forecasting performance I organized under the auspices of the IMF Staff Papers The assumption that the forecaster s goal is to do as well as possible in predicting the actual outcome is sometimes questionable In the context of private sector forecasts this is because the incentives for forecasters may induce them to herd rather than to reveal their true forecasts Public sector forecasts may also be distorted although for different reasons Forecasts associated with IMF programs for example are often the result of negotiations between the IMF staff and the country authorities and are perhaps more accurately viewed as goals or targets rather than pure forecasts The standard theory of time series forecasting involves a variety of components including the choice of an information set the choice of a cost function and the evaluation of forecasts in terms of the average costs of the forecast errors It is generally acknowledged that by including more relevant information in the information set one should be able to produce better forecasts
