Subcommittee on Department of Defense, 1968 **Oxford Handbook of Sociology, Social Theory and Organization Studies** Paul S. Adler, Paul du Gay, Glenn Morgan, Michael Reed, 2014-10-16 Sociology and social theory has always been a major source of new perspectives for organization studies Access to a series of authoritative accounts of theorists and research themes in sociology and social theory which have influenced developments in organization studies is essential for those wishing to deepen and extend their knowledge of the intersection of sociology and organization studies

This goal is achieved by drawing on a group of internationally renowned scholars committed in their own work to strengthening these links and asking them to provide critical accounts of particular theorists and research themes which have straddled this divide. This volume aims to strengthen ties between organization studies and contemporary sociological work at a time when there are increasing institutional barriers to such cooperation potentially generating a myopia that constricts new developments. Used in conjunction with its companion volume *The Oxford Handbook of Sociology and Organization Studies*, the reader is provided with a comprehensive account of the productive and critical interaction between sociology and organization studies over many decades. Highly international in scope, theorists and themes are drawn from both the USA and Europe in equal measure. Similarly, the authors of the chapters are drawn from both sides of the Atlantic. The result is a series of chapters on individuals and key research themes and debates which will provide faculty and post graduate researchers with appreciative, authoritative and critical accounts that can be drawn on to design courses or provided guided reading to the field.

[Strengthen the Global Science and Knowledge Base to Reduce Marine Plastic Pollution](https://pub.norden.org/temanord2021/519) Busch, Per-Olof, Schulte, Maro Luisa, Simon, Nils, 2021-04-14 Available online <https://pub.norden.org/temanord2021/519> States are on the brink to start negotiations on a global agreement on plastic pollution. In this context, scientists, policymakers and stakeholders voiced requests for strengthening and improving the knowledge base. These requests often include demands for a scientific advisory mechanism or body that operates as a two-way interface between science and policy and that informs policy and decision making in the global combat against plastic waste in the oceans and the need for a life cycle approach to marine plastic pollution that covers all stages in the plastics life cycle. The report makes the case for a global scientific mechanism on marine litter and microplastics and discusses the conditions to make it work effectively and to enable it to strengthen the global science and knowledge base on marine litter and microplastics.

Cybernetics D.A. Novikov, 2015-12-09 This book is a concise navigator across the history of cybernetics, its state of the art and prospects. The evolution of cybernetics from N. Wiener to the present day and the reasons of its ups and downs are presented. The correlation of cybernetics with the philosophy and methodology of control as well as with system theory and systems analysis is clearly demonstrated. The book presents a detailed analysis focusing on the modern trends of research in cybernetics. A new development stage of cybernetics, the so-called cybernetics 2.0, is discussed as a science on general regularities of systems organization and control. The author substantiates the topicality of elaborating a new branch of cybernetics, i.e. organization theory, which studies an organization as a property process and system. The book is intended for theoreticians and practitioners as well as for students, postgraduates and doctoral candidates. In the first place, the target audience includes tutors and lecturers preparing courses on cybernetics, control theory and systems science.

Knowledge Vyacheslav S. Stepin, 2005-11-13 In *Theoretical Knowledge* an original conception of a structure and dynamics of scientific knowledge is proposed. A detailed analysis of the foundations of science performed by the author allowed him to develop new ideas and approaches to demonstrate how sociocultural factors are incorporated in the process of yielding of new theories. He shows direct and inverse links between foundations of science and new theories and empirical facts evolved from those how among many potentially possible histories of science a culture selects just those directions which become a real history of science. The author analyses mechanisms of the generation of scientific theories and shows that those are changed in the process of historical development of science. He displays three historical types of scientific rationality: classical, non-classical, and post-non-classical, which appears in modern science and shows features of their coexistence and interplay. It is shown that along with the emerging of post-non-classical rationality science increases the sphere of its worldview applications. Science begins to correlate not only with the basic values of technogenic civilization but also with some values and patterns of traditional cultures. The investigation is based on the extensive literature on the history of natural and social sciences. The reader will find in the book authentic historical reconstructions of the processes of the development of classical and quantum electrodynamics, relativity and conceptions of evolution in biology.
