Hild Ph. D.,2004-03 The impact of advances in medical

technologies is beginning to reveal that Prostate Cancer is a much larger problem than the general public perceives. Newer tools for diagnosing tiny microscopic cancer cells in younger men have caused the medical community to recommend that men in their early 40s get a PSA Cancer screen with routine physical exams instead of waiting until they are in their late 50s only then to discover cancer is present. The medical community is not doing a good job of communicating that we may be heading for a pandemic if diagnosis and treatment is not routinely conducted in younger and younger men. The Prostate Cancer Primer is the culmination of a research professor's intense effort to learn about current options that are available for preventing cancer, suggestions for understanding what currently available treatment options there are, complete with side effects, how to choose which treatment is right for today's health-conscious adult man and his family. Oncologists and urologists interviewed for this Primer are in basic agreement that too little communication exists between the medical community and men who need to know what their prostate options are. This compilation of research is aimed at filling that void for all men who are interested in living a healthful life.

[A Practical Guide to Teaching Research Methods in Education](#)
Aimee LaPointe Terosky, Vicki L. Baker, Jeffrey C. Sun, 2023-03-23

A Practical Guide to Teaching Research Methods in Education brings together more than 60 faculty experts. The contributors share detailed lesson plans about selected research concepts or skills in education and related disciplines as well as discussions of the intellectual preparation needed to effectively teach the lesson. Grounded in the wisdom of practice from exemplary and award-winning faculty from diverse institution types, career stages, and demographic backgrounds, this book draws on both the practical and cognitive elements of teaching educational and related research to students in higher education today. The book is divided into eight sections covering the following key elements within education and related research: problems and research questions, literature reviews, and theoretical frameworks; research design; quantitative methods; qualitative methods; mixed methods; findings and discussions; and special topics such as student identity, development, community, and policy; engaged research; and research dissemination. Within each section, individual chapters specifically focus on skills and perspectives needed to navigate the complexities of educational research. The concluding chapter reflects on how teachers of research also need to be learners of research as faculty continuously strive for mastery, identity, and creativity in how they guide our next generation of knowledge producers through the research process. Undergraduate and graduate professors of education and related research, courses, dissertation chairs, committee members, faculty development staff members, and graduate students would all benefit from the lessons and expert commentary contained in this book.

Formal Methods and Models for System Design Rajesh Gupta, Paul Le Guernic, Sandeep Kumar Shukla, Jean-Pierre Talpin, 2004-06-30 Perhaps nothing characterizes the inherent heterogeneity in embedded systems than the ability to choose between hardware and software implementations of a given system function Indeed most embedded systems at their core represent a careful division and design of hardware and software parts of the system To do this task effectively models and methods are necessary functionality to capture application behavior needs and system implementation constraints Formal modeling can be valuable in addressing these tasks As with most engineering domains co design practice defines the state of the it seeks to add new capabilities in system conceptualization mod art though eling optimization and implementation These advances particularly those related to synthesis and verification tasks directly depend upon formal understanding of system behavior and performance measures Current practice in system modeling relies upon exploiting high level programming frameworks such as SystemC Esterel to capture design at increasingly higher levels of abstraction and attempts to reduce the system implementation task While raising the abstraction levels for design and verification tasks to be really useful these approaches must also provide for reuse adaptation of the existing intellectual property IP blocks
