Earthshaking Science Susan Elizabeth Hough, 2018-06-05 This is the first book to really make sense of the dizzying array of information that has emerged in recent decades about earthquakes Susan Hough a research seismologist in one of North America's most active earthquake zones and an expert at communicating this complex science to the public separates fact from fiction She fills in many of the blanks that remained after plate tectonics theory in the 1960s first gave us a rough idea of just what earthquakes are about How do earthquakes start How do they stop Do earthquakes occur at regular intervals on faults If not why not Are earthquakes predictable How hard will the ground shake following an earthquake of a given magnitude How does one quantify future seismic hazard As Hough recounts in brisk jargon free prose improvements in earthquake recording capability in the 1960s and 1970s set the stage for a period of rapid development in earthquake science Although some formidable enigmas have remained much has been learned on critical issues such as earthquake prediction seismic hazard assessment and ground motion prediction This book addresses those issues Because earthquake science is so new it has rarely been presented outside of technical journals that are all but opaque to nonspecialists Earthshaking Science changes all this It tackles the issues at the forefront of modern seismology in a way most readers can understand In it an expert conveys not only the facts but the passion and excitement associated with research at the frontiers of this fascinating field Hough proves beyond a doubt that this passion and excitement is more accessible than one might think

The Diversification of Health Bart Penders, 2014-03-15 Complex problems and ambitious goals are often thought to become easier by enlarging and diversifying the group of experts dealing with them As a result these complex entities are fragmented into smaller ones that can be dealt with by single laboratories Bart Penders ventured into nutrition science to observe and join teams of scientists to find out what happens to these problems and goals He attended conferences and workshops and worked in their laboratories He shows that scientists mobilise everything in their power to solve problems they reconstruct elements of the problem such as our health In the process the search for health has led to its diversification Aerosol Science for Industrial Hygienists J.H. Vincent, 1995-10-10 Aerosols in workplace atmospheres have been and continue to be a major focus of industrial hygiene Although there are many existing texts on aerosol science and on occupational health respectively this new book sets out to be complementary to these and to provide a link between the two fields In particular the central concept of worker exposure leads to a structured approach which draws together wide ranging aspects of aerosol science within the occupational health framework Introductory chapters are concerned with the nature and properties of aerosols and how they are generated in the occupational environment The book then goes on to provide a description of the fundamental mechanical properties of aerosols in particular those mechanical properties associated with the motion of airborne particles which govern particle transport inhalation deposition sampling and control There follows a description of the optical properties of workplace aerosols since these are important in the visual appearance of aerosols and in many aspects of measurement The central core of the book deals with the processes which govern the nature of exposure to and the subsequent fate and effects of airborne particles leading to a rational framework for standards measurement and control Finally a chapter is added which relates what has been said about aerosols to gaseous and vapour contaminants The book is aimed at graduate students and practitioners in industrial hygiene and other occupational and environmental health disciplines **Building Science Series**, 1973 Forensic Laboratory Management W. Mark Dale, Wendy S. Becker, 2014-09-26 New technologies including DNA and digital databases that can compare known and questioned exemplars have transformed forensic science and greatly impacted the investigative process They have also made the work more complicated Obtaining proper resources to provide quality and timely forensic services is frequently a challenge for forensic managers who are often promoted from casework duties and must now learn a whole new set of leadership skills The interdisciplinary and scientific nature of laboratories requires strong leadership ability to manage complex issues often in adversarial settings Forensic Laboratory Management Applying Business Principles provides laboratory managers with business tools that apply the best science to the best evidence in a manner that increases the efficiency and effectiveness of their management decision making The authors present a performance model with seven recommendations to implement illustrating how forensic managers can serve as leaders and strategically improve the operation and management in scientific laboratories Topics include Key business

metrics and cost benefit analyses Ethical lapses why they occur possible motives and how problems can be prevented Forensic training education and institutes ISO IEC 17025 accreditation implementation The book includes case studies simulating a working laboratory in which readers can apply business tools with actual data reinforcing discussion concepts Each chapter also includes a brief review of current literature of the best management theories and practice The downloadable resources supply two mock trial transcripts and associated case files along with PowerPoint slides from Dr George Carmody s workshop on Forensic DNA Statistics and Dr Doug Lucas s presentation on ethics

Dynamical Cognitive Science Lawrence M. Ward, 2002 An introduction to the application of dynamical systems science to the cognitive sciences Dynamical Cognitive Science makes available to the cognitive science community the analytical tools and techniques of dynamical systems science adding the variables of change and time to the study of human cognition The unifying theme is that human behavior is an unfolding in time whose study should be augmented by the application of time sensitive tools from disciplines such as physics mathematics and economics where change over time is of central importance The book provides a fast paced comprehensive introduction to the application of dynamical systems science to the cognitive sciences Topics include linear and nonlinear time series analysis chaos theory complexity theory relaxation oscillators and metatheoretical issues of modeling and theory building Tools and techniques are discussed in the context of their application to basic cognitive science problems including perception memory psychophysics judgment and decision making and consciousness The final chapter summarizes the contemporary study of consciousness and suggests how dynamical approaches to cognitive science can help to advance our understanding of this central concept

Materials Science and Technology Sabar Hutagalung, 2012-03-07 Materials are important to mankind because of the benefits that can be derived from the manipulation of their properties for example electrical conductivity dielectric constant magnetization optical transmittance

strength and toughness Materials science is a broad field and can be considered to be an interdisciplinary area Included within it are the studies of the structure and properties of any material the creation of new types of materials and the manipulation of a material s properties to suit the needs of a specific application The contributors of the chapters in this book have various areas of expertise therefore this book is interdisciplinary and is written for readers with backgrounds in physical science The book consists of fourteen chapters that have been divided into four sections Section one includes five chapters on advanced materials and processing Section two includes two chapters on bio materials which deal with the preparation and modification of new types of bio materials Section three consists of three chapters on nanomaterials specifically the study of carbon nanotubes nano machining and nanoparticles Section four includes four chapters on optical materials
