Szaro, Kieth E. Severson, David R. Patton, 1988 Historically the management of public lands from a multiple use perspective has led to a system that emphasizes those habitat components or faunal elements that primarily resulted in some sort of definable economic value While this often benefitted other species that were not even considered in the original prescriptions it also negatively impacted others We no longer can afford to take this simplistic view of ecosystem management We need to use a more holistic approach where ecological landscapes are considered as units and land management practices incorporate all elements into an integrated policy This includes examining the impacts of proposed land uses on amphibian reptile and small mammal populations *General Technical Report RM.* ,1988 **Israel Journal of Zoology** ,1996 *Bulletin of the Kyoto Gakugei University* ,1951 *Labour Contracts and Labour Relations in Early Modern Central Japan* Mary Louise Nagata, 2004-11-23 Based on a collection of labour contracts and other documents this book examines the legal economic and social relations of labour as they developed in the commercial enterprises of Tokugawa Japan The urban focus is Kyoto the cultural capital and smallest of the three great cities of the Tokugawa period but the data comes from a wider region of commercial and castle towns and rural villages in central Japan **Kyoto** John Dougill, 2015-07-27 Kyoto the ancient former capital of Japan breathes history and mystery Its temples gardens and palaces are testimony to many centuries of aristocratic and religious grandeur Under the veneer of modernity the city remains filled with countless reminders of a proud past John Dougill explores this most venerable of Japanese cities revealing the spirit of place and the individuals that have shaped its often dramatic history Courtiers and courtesans poets and priests samurai and geisha people the pages of his account Covering twelve centuries in all the book not only provides a historical overview but brings to life the cultural magnificence of the city of Purple Hills and Crystal Streams City of Power The seat of aristocrats and warriors military might and spiritual authority unification and the transition to modernity City of Ritual Buddhist sects and Shinto festivals tea ceremony the role of the geisha the influence of Zen City of Arts Poetry and fiction architecture and garden design Heian verse and Noh theatre art and handicrafts the Japanese Hollywood **Alien Reptiles and Amphibians** Fred Kraus, 2008-12-19 Transportation of species to areas outside their native ranges has been a feature of human culture for millennia During this time such activities have largely been viewed as beneficial or inconsequential However it has become increasingly clear that human caused introductions of alien biota are an ecological disruption whose consequences rival those of better known insults like chemical pollution habitat loss and climate change Indeed the irreversible nature of most alien species introductions makes them less prone to correction than many other ecological problems Current reshuffling of species ranges is so great that the present era has been referred to by some as the Homogocene in an effort to reflect the unique magnitude of the changes being made These alien interlopers often cause considerable ecological and economic damage where introduced Species extinctions food

web disruptions community alterations ecosystem conversion changes in nutrient cycling fisheries collapse watershed degradation agricultural loss building damage and disease epidemics are among the destructive and frequently unpredictable ecological and economic effects that invasive alien species can inflict The magnitude of these damages continues to grow with virtually all environments heavily used by humans now dominated by alien species and many natural areas becoming increasingly prone to alien invasion as well Attention to this problem has increased in the past decade or so and efforts to prevent or limit further harm are gaining wider scientific and political acceptance

Toxic Archipelago Brett L. Walker, 2011-07-01 Every person on the planet is entangled in a web of ecological relationships that link farms and factories with human consumers Our lives depend on these relationships and are imperiled by them as well Nowhere is this truer than on the Japanese archipelago During the nineteenth century Japan saw the rise of Homo sapiens industrialis a new breed of human transformed by an engineered industrialized and poisonous environment Toxins moved freely from mines factory sites and rice paddies into human bodies Toxic Archipelago explores how toxic pollution works its way into porous human bodies and brings unimaginable pain to some of them Brett Walker examines startling case studies of industrial toxins that know no boundaries deaths from insecticide contaminations poisonings from copper zinc and lead mining congenital deformities from methylmercury factory effluents and lung diseases from sulfur dioxide and asbestos This powerful probing book demonstrates how the Japanese archipelago has become industrialized over the last two hundred years and how people and the environment have suffered as a consequence
