Dynamic Knowledge Representation in Scientific Domains Pshenichny, Cyril, Diviaco, Paolo, Mouromtsev, Dmitry, 2018-03-16 The main approach to understanding and creating knowledge engineering concepts is static knowledge. Currently, there is a need to approach knowledge through a dynamic lens and address changing relations on an elaborated syntactic and semantic basis. Dynamic Knowledge Representation in Scientific Domains provides emerging research on the internal and external changes in knowledge within various subject areas and their visual representations. While highlighting topics such as behavior diagrams, distribution analysis, and qualitative modeling, this publication explores the structural development and assessment of knowledge models. This book is an important resource for academicians, researchers, students, and practitioners seeking current research on information visualization in order to foster research and collaboration.

The Gaze of Drifting Skies Jonathan Barli, 2016-11-09 Depicting the bustling crowds of humanity from magisterial heights was once a popular visual genre among artists and the public regularly appearing in mass market newspapers and magazines, carnivals, and circuses, cook outs, and baseball games, bustling city streets and train stations, or parades and epic battle scenes, artists depicted the everyday life of urban and country settings where communities gathered for fun and revelry. Adults and children alike could spend hours delighting in the details of these marvelously orchestrated scenes of human bustle. This coffee table collection showcases the remarkable beauty and breadth of these forgotten American classics. *Physics and Ecology in Fluids* Marek Stastna, Derek Steinmoeller, 2023-02-01 *Physics and Ecology in Fluids* Modeling and Numerical Experiments develops mathematical and numerical modeling methodologies for coupled biological hydrodynamic problems with a focus on process studies. The modeling is presented in a way that discusses mathematical background but does not depend on a large body of mathematical prerequisites or experience. Models are built up from simple to complex. This includes discussion of approximations and shortcuts commonly made by large computational models for natural bodies of water. Computational approaches are presented using conceptual explanations and pseudo code along with well-documented open source code. Over a dozen codes that run locally on the reader's laptop provide hands-on experience with various aspects of the modeling process and its scientific results. One large-scale code for basin-scale modeling based on the Discontinuous Galerkin methodology is presented along with a self-contained discussion of theoretical background and implementation details. *Physics and Ecology in Fluids* is written for graduate students, academic researchers, and government scientists. Professors can use the book as a stand-alone resource for a one-term graduate course or to supplement teaching of

their own graduate courses All readers may also use the book as background user s guide for the software included with the book Presents accessible codes along with clear explanations of the mathematical modeling process that leads up to the code Provides a consistent development of the mathematical models for hydrodynamic and biological modeling which are rarely covered together Includes an informal discussion style tone throughout but with serious applied mathematics content allowing a level of detail relevant for multiple reader types
