Kinship to Mastery Stephen R. Kellert, 2003-10 Kinship to Mastery is a fascinating and accessible exploration of the notion of biophilia the idea that humans having evolved with the rest of creation possess a biologically based attraction to nature and exhibit an innate affinity for life and lifelike processes Stephen R Kellert sets forth the idea that people exhibit different expressions of biophilia in different contexts and demonstrates how our quality of life in the largest sense is dependent upon the richness of our connections with nature While the natural world provides us with material necessities food clothing medicine clean air pure water it just as importantly plays a key role in other aspects of our lives including intellectual capacity emotional bonding aesthetic attraction creativity imagination and even the recognition of a just and purposeful existence As Kellert explains each expression of biophilia shows how our physical material intellectual emotional and spiritual well being is to a great extent dependent on our relationships with the natural world that surrounds us Kinship to Mastery is a thought provoking examination of a concept that while not widely known has a significant and direct effect on the lives of people everywhere Because the full expression of biophilia is integral to our overall health our ongoing destruction of the environment could have far more serious consequences than many people think In a readable and compelling style Kellert describes and explains the concept of biophilia and demonstrates to a general audience the wide ranging implications of environmental degradation Kinship to Mastery continues the exploration of biophilia begun with Edward O Wilson's landmark book *Biophilia* Harvard University Press 1984 and followed by *The Biophilia Hypothesis* Island Press 1993 co edited by Wilson and Kellert which brought together some of the most creative scientists of our time to explore Wilson's theory in depth **Ecology and Power in the Age of Empire** Corey Ross, 2017-03-31 Ecology and Power in the Age of Empire provides the first wide ranging environmental history of the heyday of European imperialism from the late

nineteenth century to the end of the colonial era It focuses on the ecological dimensions of the explosive growth of tropical commodity production global trade and modern resource management transformations that still visibly shape our world today and how they were related to broader social cultural and political developments in Europe s colonies Covering the overseas empires of all the major European powers Corey Ross argues that tropical environments were not merely a stage on which conquest and subjugation took place but were an essential part of the colonial project profoundly shaping the imperial enterprise even as they were shaped by it The story he tells is not only about the complexities of human experience but also about people s relationship with the ecosystems in which they were themselves embedded the soil water plants and animals that were likewise a part of Europe s empire Although it shows that imperial conquest rarely represented a sudden bout of ecological devastation it nonetheless demonstrates that modern imperialism marked a decisive and largely negative milestone for the natural environment By relating the expansion of modern empire global trade and mass consumption to the momentous ecological shifts that they entailed this book provides a historical perspective on the vital nexus of social political and environmental issues that we face in the twenty first century world **Larding the Lean Earth** Steven

Stoll,2003-07-03 A Major History of Early Americans Ideas about Conservation Fifty years after the Revolution American farmers faced a crisis the failing soils of the Atlantic states threatened the agricultural prosperity upon which the republic was founded Larding the Lean Earth explores the tempestuous debates that erupted between improvers intent on sustaining the soil of existing farms and emigrants who thought it wiser and more American to move westward as the soil gave out Larding the Lean Earth is a signal work of environmental history and an original contribution to the study of antebellum America The Dawn of Agriculture and the Earliest States in Genesis 1-11 Natan Levy,2023-11-29 This book invites a close textual encounter with the first 11 chapters of Genesis as an intimate drama of marginalised peoples wrestling with the rise of the world s first grain states in the Mesopotamian alluvium The initial 11 chapters of Genesis are often considered discordant and fragmentary despite being a story of beginnings within the context of the Bible Readers discover how these formative chapters cohere as a cross generational account of peoples grappling with the hegemonic spread of domesticated grain production and the concomitant rise of the pristine states of Mesopotamia The book reveals how key episodes from the Genesis narrative reflect major societal revolutions of the Neolithic period in Mesopotamia through a three fold hermeneutical method literary analysis of the Bible and contemporary cuneiform texts modern scholarship from archaeological anthropological ecological and historical sources and relevant exegesis from the Second Temple and rabbinical era These three strands entwine to recount a generally sequential story of the earliest archaic states as narrated by non elites at the margins of these emerging state spaces The Dawn of Agriculture and the Earliest States in Genesis 1 11 provides a fascinating reading of the first 11 chapters of Genesis appealing to students and scholars of the Hebrew Bible and the Near East as well as those working on ecological injustice from a religious vantage point Warfare and Agriculture in

Geopolitics and the Green Revolution John H. Perkins, 1997-12-14 During the last 100 years the worldwide yields of cereal grains such as wheat and rice have increased dramatically Since the 1950s developments in plant breeding science have been heralded as a Green Revolution in modern agriculture But what factors have enabled and promoted these technical changes And what are the implications for the future of agriculture This new book uses a framework of political ecology and environmental history to explore the Green Revolution's emergence during the 20th century in the United States Mexico India and Britain It argues that the national security planning efforts of each nation were the most important forces promoting the development and spread of the Green Revolution when viewed in the larger scheme this period can be seen as the latest chapter in the long history of wheat use among humans which dates back to the neolithic revolution Efforts to reform agriculture and mitigate some of the harsh environmental and social consequences of the Green Revolution have generally been insensitive to the deeply embedded nature of high yielding agriculture in human ecology and political affairs This important insight challenges those involved in agriculture reform to make productivity both sustainable and adequate for a growing human population

Bread, Beer and the Seeds of Change Thomas R. Sinclair, Carol Janas Sinclair, 2010 The history of humankind is intimately tied to the history of agriculture powerful societies rose persisted and waned in parallel with their food supply systems Describing what crops were grown the constraints on their production and the foods that were obtained this book traces the impact of cropping and food preparation in ten societies that were among the most powerful and influential in history detailing how technology varied and developed as it related directly to agriculture and food production The book initially considers growing and eating grains beginning with the transition from hunter gatherers to agrarian communities Five early agricultural societies are examined followed by the advancement of technology from the ancient Greeks and Romans to the present It concludes by addressing the implications for the future of agriculture and food supply as grain production moves towards biofuels A compelling text for all those interested in the history of society and

The Culture of Wilderness Frieda Knobloch,2000-11-09 In this innovative work of cultural and technological history Frieda Knobloch describes how agriculture functioned as a colonizing force in the American West between 1862 and 1945 Using agricultural textbooks USDA documents and historical accounts of western settlement she explores the implications of the premise that civilization progresses by bringing agriculture to wilderness Her analysis is the first to place the trans Mississippi West in the broad context of European and classical Roman agricultural history Knobloch shows how western land plants animals and people were subjugated in the name of cultivation and improvement Illuminating the cultural significance of plows livestock trees grasses and even weeds she demonstrates that discourse about agriculture portrays civilization as the emergence of a colonial socially stratified and bureaucratic culture from a primitive feminine and unruly wilderness Specifically Knobloch highlights the displacement of women from their historical role as food gatherers and producers and reveals how Native American land use patterns functioned as a form of cultural resistance Describing the professionalization of knowledge Knobloch concludes that both social and biological diversity have suffered as a result of agricultural progress
