Energy Abstracts for Policy Analysis ,1984-07 *Perspectives on Management Capacity Building* Beth W. Honadle, Arnold M. Howitt, 1986-01-15 *Perspectives on Management Capacity Building* provides a lively spectrum of views on the problems and prospects of improving the management and performance of municipal governments in the United States Leading specialists in public administration probe the management needs of local governments and explore ways in which they can improve their capacity to manage Today state and local governments are caught in the transition between the expansionism of the post World War II years and the retrenchment era of the late seventies and eighties Improved management capacity has emerged as the most effective way for local governments to ride out the economic and political pressures confronting them This book first investigates the meaning of the term management capacity It then considers how management needs have changed in the post war period and how these needs vary among large cities suburbs and rural communities Two of the contributions explore the organizational politics of management improvement while others look at the functional areas of computers and financial management The book also addresses human resource problems such as labor relations management development and training of municipal legislators and concludes with several viewpoints on federal efforts to improve local management capacity **Contemporary Issues in African Administration and**

Development Politics ,1990 *Regulatory Choices* Richard J. Gilbert, 2023-11-15 *Regulatory Choices* offers the first comprehensive economic history of energy policy and its consequences for California where some of the most innovative and far ranging programs of regulatory reform have originated The authors of this volume have gathered together an impressive wealth of material about actual policy decisions and their repercussions and have subjected their findings to astute economic analysis This book will serve for years to come as an invaluable reference on the costs and effects of various energy policies With its focus on bringing prices in alignment with the true cost of producing power and delivering it to the customer the

first part of the book outlines the issue of setting utility rates and considers some of the proposals to provide regulated industries with incentives to respond to economic and environmental concerns The problems of energy supply occupy the second part of the book which includes a survey of the costs of alternative energy sources and estimates of their environmental impacts as well as a case study of the construction of the Diablo Canyon nuclear power plant The book concludes by documenting the results of subsidy programs that were designed to target the development of wind power and residential energy conservation Regulators we learn have a mixed record when it comes to managing the production of energy Some conservation programs have enjoyed considerable economic success particularly those that correct a lack of consumer information Others such as the renewable energy tax credits or programs designed to subsidize new technologies have cost much more than the value of the energy they have saved What emerges clearly from this study is that regulated industries are not immune from the forces of competition This title is part of UC Press s Voices Revived program which commemorates University of California Press s mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1991 *Elgar Encyclopedia of Energy Economics* Angeliki Menegaki,2025-05-14 This prescient Encyclopedia outlines the breadth and depth of the burgeoning field of energy economics Entries cover a wide range of topics including traditional and renewable energy sources environmental impacts energy efficiency market structures and the economic implications of energy transitions This title contains one or more Open Access chapters **Encyclopedia of Global Warming and Climate Change, Second Edition** S. George Philander,2012-06-13 The First Edition of the Encyclopedia of Global Warming and Climate Change provided a multi authored academic yet non technical resource for students and teachers to understand the importance of global warming to appreciate the effects of human activity and greenhouse gases around the world and to learn the history of climate change and the research enterprise examining it This edition was well received with notable reviews Since its publication the debate over the advent of global warming at least partially brought on by human enterprise has continued to ebb and flow depending literally on the weather politics and media coverage of climate summits and debates Advances in research also change the discourse as new data is collected and new scientific projects continue to explore and explain global warming and climate change Thus a new Second Edition updates more than half of the original entries and adds new perspectives and content to keep students and researchers up to date in a field that has proven provocatively lively

Energy Research Abstracts ,1979 **ERS Staff Report** ,1994 **Energy** Joseph Russell Rudolph,1995 A road map for the novice researcher contemplating the broad field affected by and concerned with energy Local Environmental Politics in China Genia Kostka,2017-07-05 Knowledge and insight in national environmental governance in China is widespread However increasingly it has been acknowledged that the major problems in guiding the Chinese economy and

society towards sustainability are to be found at the local level This book illuminates the fast changing dynamics of local environmental politics in China a topic only marginally addressed in the literature In the course of building up an institutional framework for environmental governance over the last decade local actors have generated a variety of policy innovations and experiments In large measure these are creative responses to two main challenges associated with translating national environmental policies into local realities The first such challenge is apolicy implementation gap stemming from the absence of the state capacity necessary to the implementation of environmental measures The second challenge refers to the need for local non state actors to engage in environmental management oftentimes such a participation gap contributes to implementation failures In recent years we have seen a multitude of initiatives within China at the provincial level and below designed to bridge both gaps Hence the central aim of this book is to assess these experiments and innovations in local environmental politics This book was originally published as a special issue of the *Journal of Environmental Policy and Planning* *The Energy Journal* ,1984 **Research Anthology on Clean Energy Management and Solutions** Management Association, Information Resources,2021-06-25 Energy usage and consumption continue to rise globally each year with the most efficient and cost effective energy sources causing huge impacts to the environment In an effort to mitigate harmful effects to the environment implementing clean energy resources and utilizing green energy management strategies have become worldwide initiatives with many countries from all regions quickly becoming leaders in renewable energy usage Still not every energy resource is without flaws Researchers must develop effective and low cost strategies for clean energy in order to find the balance between production and consumption The *Research Anthology on Clean Energy Management and Solutions* provides in depth research that explores strategies and techniques used in the energy production field to optimize energy efficiency in order to maintain clean and safe use while delivering ample energy coverage The anthology also seeks solutions to energy that have not yet been optimized or are still produced in a way that is harmful to the environment Covering topics such as hydrogen fuel cells renewable energy solar power solar systems cost savings and climate protection this text is essential for electrical engineers nuclear engineers environmentalists managers policymakers government officials professionals in the energy industry researchers academicians and students looking for the latest research on clean energy management *Bulletin of the Atomic Scientists* ,1983-08 The *Bulletin of the Atomic Scientists* is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the *Bulletin* s iconic Doomsday Clock stimulates solutions for a safer world **The Social and Behavioural Aspects of Climate Change** Pim Martens,Chiung Ting Chang,2017-09-08 Over the past few years and certainly since the publication of the Stern Report there has been increasing recognition that climate change is not only an environmental crisis but one with important social and economic dimensions There is now a growing need for multi disciplinary research and for the science of climate change to be usefully translated

for policy makers Until very recently scientific and policy emphasis on climate change has focused almost exclusively on mitigation efforts mechanisms and regulations to reduce greenhouse gas emissions The success of such efforts to date is debatable In fact the impact of ever more stringent emission control programmes could potentially have enormous social consequences Little effort has been expended on the exploration of a systematic evaluation of climate stabilization benefits or the costs of adapting to a changed climate let alone attempting to integrate different approaches There is an increasing recognition that the key actors in the climate crisis also need to be preparing for change that is unavoidable This has resulted in a greater consideration of vulnerability and adaptation The book based on the research programme Vulnerability Adaptation and Mitigation VAM which ran from 2004 to 2010 funded by the Netherlands Organisation for Scientific Research NWO presents a cluster of case studies of industries communities and institutions which each show how vulnerability adaptation and mitigation analyses can be integrated using social behavioural sciences Each chapter makes specific recommendations for the studied industry sector community or institution analyses the latest research developments of the field and identifies priorities for future research The book argues that the inherent complexity of climate change will ultimately require a much more integrated response both scientifically to better understand multiple causes and impacts as well as at the scientific policy interface where new forms of engagement between scientists policy makers and wider stakeholder groups can make a valuable contribution to more informed climate policy and practice The book is particularly timely as the scientific research and policy debate is shifting from one of problem framing to new agendas that are much more concerned with implementation the improvement of assessment methodologies from a multi disciplinary perspective and the reframing of current scientific understanding towards mitigation adaptation and vulnerability A critical element in responding to the climate change challenge will be to ensure the translation of these new scientific insights into innovative policy and practice on the ground This book provides some fundamental elements to answer this need The Social and Behavioural Aspects of Climate Change Linking Vulnerability Adaptation and Mitigation will be essential reading for social science researchers and policy managers in the area of climate change as well as for those who want to know what the social and behavioural sciences can contribute toward coping with climate hazards NGOs law firms and businesses in the energy sector or other climate related fields will also find the book of great value
