**Methods and Applications in Insurance and Finance** M'hamed Eddahbi, El Hassan Essaky, Josep Vives, 2016-04-08 This book is the outcome of the CIMPA School on Statistical Methods and Applications in Insurance and Finance held in Marrakech and Kelaat M'gouna Morocco in April 2013. It presents two lectures and seven refereed papers from the school offering the reader important insights into key topics. The first of the lectures by Frederic Viens addresses risk management via hedging in discrete and continuous time while the second by Boualem Djehiche reviews statistical estimation methods applied to life and disability insurance. The refereed papers offer diverse perspectives and extensive discussions on subjects including optimal control, financial modeling using stochastic differential equations, pricing and hedging of financial derivatives and sensitivity analysis. Each chapter of the volume includes a comprehensive bibliography to promote further research.

**Stochastic Processes, Finance and Control** Robert J. Elliott, 2012 This Festschrift is dedicated to Robert J. Elliott on the occasion of his 70th birthday. It brings together a collection of chapters by distinguished and eminent scholars in the fields of stochastic processes, filtering and control as well as their applications to mathematical finance. It presents cutting edge developments in these fields and is a valuable source of references for researchers, graduate students and market practitioners in mathematical finance and financial engineering. Topics include the theory of stochastic processes, differential and stochastic games, mathematical finance, filtering and control.

**Generalized Poisson Models and their Applications in Insurance and Finance** Vladimir E. Bening, Victor Yu. Korolev, 2012-06-11 The series is devoted to the publication of high level monographs and surveys which cover the whole spectrum of probability and statistics. The books of the series are addressed to both experts and advanced students.

**Risk Analysis in Finance and Insurance, Second Edition** Alexander Melnikov, 2011-04-25 Risk Analysis in Finance and Insurance Second Edition presents an accessible yet comprehensive introduction to the main concepts and methods that transform risk management into a quantitative science. Taking into account the interdisciplinary nature of risk analysis, the author discusses many important ideas from mathematics, finance and actuarial science in a simplified manner. He explores the interconnections among these disciplines and encourages readers toward further study of the subject. This edition continues to study risks associated with financial and insurance contracts using an approach that estimates the value of future payments based on current financial insurance and other information. New to the Second Edition: Expanded section on the foundations of probability and stochastic analysis; Coverage of new topics including financial markets with stochastic volatility, risk measures, risk-adjusted performance measures, and equity-linked insurance; More worked examples and problems. Reorganized and expanded, this updated book illustrates how to use quantitative methods of stochastic analysis in modern financial mathematics. These methods can be naturally extended and applied in actuarial science, thus leading to unified methods of risk analysis and management.

**Data Science and Risk Analytics in Finance and Insurance** Tze Leung Lai, Haipeng Xing, 2024-10-02 This book presents statistics and data science methods for risk analytics in quantitative finance and insurance. Part I covers the background

financial models and data analytical methods for market risk credit risk and operational risk in financial instruments as well as models of risk premium and insolvency in insurance contracts Part II provides an overview of machine learning including supervised unsupervised and reinforcement learning Monte Carlo simulation and sequential analysis techniques for risk analytics In Part III the book offers a non technical introduction to four key areas in financial technology artificial intelligence blockchain cloud computing and big data analytics Key Features Provides a comprehensive and in depth overview of data science methods for financial and insurance risks Unravels bandits Markov decision processes reinforcement learning and their interconnections Promotes sequential surveillance and predictive analytics for abrupt changes in risk factors Introduces the ABCDs of FinTech Artificial intelligence blockchain cloud computing and big data analytics Includes supplements and exercises to facilitate deeper comprehension    Semi-Markov Risk Models for Finance, Insurance and Reliability Jacques Janssen,Raimondo Manca,2007-05-15 This book aims to give a complete and self contained presentation of semi Markov models with finitely many states in view of solving real life problems of risk management in three main fields Finance Insurance and Reliability providing a useful complement to our first book Janssen and Manca 2006 which gives a theoretical presentation of semi Markov theory However to help assure the book is self contained the first three chapters provide a summary of the basic tools on semi Markov theory that the reader will need to understand our presentation For more details we refer the reader to our first book Janssen and Manca 2006 whose notations definitions and results have been used in these four first chapters Nowadays the potential for theoretical models to be used on real life problems is severely limited if there are no good computer programs to process the relevant data We therefore systematically propose the basic algorithms so that effective numerical results can be obtained Another important feature of this book is its presentation of both homogeneous and non homogeneous models It is well known that the fundamental structure of many real life problems is not homogeneous in time and the application of homogeneous models to such problems gives in the best case only approximated results or in the worst case nonsense results    Artificial Intelligence in Insurance and Finance Glenn Fung,Sou Cheng Choi,Luisa Fernanda Polania Cabrera,Victor Wu,Lawrence Kwan Ho Ma,2022-01-04 Luisa Fernanda Polania Cabrera is an Experienced Professional at Target Corporation United States Victor Wu is a Product Manager at GitLab Inc San Francisco United States Sou Cheng Choi is a Consulting Principle Data Scientist at Allstate Corporation Lawrence Kwan Ho Ma is the Founder Director and Chief Scientist of Valigo Limited and Founder CEO and Chief Scientist of EMALI IO Limited Glenn M Fung is the Chief Research Scientist at American Family Insurance
