**The Oxford Handbook of African Archaeology** Peter Mitchell, Paul Lane, 2013-07-04 Africa has the longest and arguably the most diverse archaeological record of any of the continents. It is where the human lineage first evolved and from where Homo sapiens spread across the rest of the world. Later it witnessed novel experiments in food production and unique trajectories to urbanism and the organisation of large communities that were not always structured along strictly hierarchical lines. Millennia of engagement with societies in other parts of the world confirm Africa's active participation in the construction of the modern world while the richness of its history, ethnography and linguistics provide unusually powerful opportunities for constructing interdisciplinary narratives of Africa's past. This Handbook provides a comprehensive and up to date synthesis of African archaeology covering the entirety of the continent's past from the beginnings of human evolution to the archaeological legacy of European colonialism. As well as covering almost all periods and regions of the continent it includes a mixture of key methodological and theoretical issues and debates and situates the subject's contemporary practice within the discipline's history and the infrastructural challenges now facing its practitioners. Bringing together essays on all these themes from over seventy contributors many of them living and working in Africa it offers a highly accessible contemporary account of the subject for use by scholars and students of not only archaeology but also history, anthropology and other disciplines.

**The Evolution of Modern Humans in Africa** Pamela R. Willoughby, 2007 Pamela Willoughby provides a wide ranging synthesis of current knowledge about the evolution of fully modern humans in Africa during the Middle Palaeolithic/Middle Stone Age. According to most scholars our modern ancestors first emerged in Africa and then spread throughout the habitable world. Willoughby brings evidence from mitochondrial DNA, ancient fossils and archaeological remains including her own research in Tanzania to bear on questions regarding the place of human species in nature, the specific origins of Homo Sapiens and the dispersal of these modern humans throughout Africa and around the globe. She confronts straightforwardly the problems of dating the earliest modern humans and she discusses the various alternative models of modern human origins which will be debated for years to come. The Evolution of Modern Humans in Africa is a compelling thought provoking book for both students and scholars.

**Ancestral Passions** Virginia Morell, 2011-01-11 This biography of the First Family of anthropology reveals how their discoveries, collaborations and rivalries contributed to our own knowledge of the origins of humankind. In this fascinating and authoritative work, acclaimed science writer Virginia Morell brings to vivid life the famous and infamous Leakey family pioneers in the field of paleoanthropology. Louis Leakey, the patriarch who persisted through initial scientific failures and scandal-ridden divorce to achieve spectacular success in digs throughout East Africa; Mary, his second wife who worked alongside Louis as they made their outstanding discoveries at Olduvai Gorge and elsewhere; and Richard, their son who ascended to the top of the field in his parents' wake only to be threatened with both near-fatal illness and fierce professional rivalry. Morell transports us into the world of these compelling

personalities demonstrating how a small clan of highly talented and fiercely competitive people came to dominate an entire field of science and to contribute immeasurably to our understanding of the origins of humanity
