Stopping Times and Directed Processes Gerald A. Edgar, Louis Sucheston, 1992-08-28 A unified treatment of the theory of stopping times for probability theorists and statisticians

Topics in Spatial Stochastic Processes Vincenzo Capasso, 2003-01-21 The theory of stochastic processes indexed by a partially ordered set has been the subject of much research over the past twenty years The objective of this CIME International Summer School was to bring to a large audience of young probabilists the general theory of spatial processes including the theory of set indexed martingales and to present the different branches of applications of this theory including stochastic geometry spatial statistics empirical processes spatial estimators and survival analysis This theory has a broad variety of applications in environmental sciences social sciences structure of material and image analysis In this volume the reader will find different approaches which foster the development of tools to modelling the spatial aspects of stochastic problems

Foundations of Symmetric Spaces of Measurable Functions Ben-Zion A. Rubshtein, Genady Ya. Grabarnik, Mustafa A. Muratov, Yulia S. Pashkova, 2016-12-09 Key definitions and results in symmetric spaces particularly L_p Lorentz Marcinkiewicz and Orlicz spaces are emphasized in this textbook A comprehensive overview of the Lorentz Marcinkiewicz and Orlicz spaces is presented based on concepts and results of symmetric spaces Scientists and researchers will find the application of linear operators ergodic theory harmonic analysis and mathematical physics noteworthy and useful This book is intended for graduate students and researchers in mathematics and may be used as a general reference for the theory of functions measure theory and functional analysis This self contained text is presented in four parts totaling seventeen chapters to correspond with a one semester lecture course Each of the four parts begins with an overview and is subsequently divided into chapters each of which concludes with exercises and notes A chapter called Complements is included at the end of the text as supplementary material to assist students with independent work

Bounded Arithmetic, Propositional Logic and Complexity Theory Jan Krajicek, 1995-11-24 Discusses the deep connections between logic and complexity theory and lists a number of intriguing open problems

Canadian Journal of Mathematics, 1994-04

Combinatorial Matrix Classes Richard A. Brualdi, 2006-08-10 A natural sequel to the author's previous book Combinatorial Matrix Theory written with H J Ryser this is the first book devoted exclusively to existence questions constructive algorithms enumeration questions and other properties concerning classes of matrices of combinatorial significance Several classes of matrices are thoroughly developed including the classes of matrices of 0's and 1's with a specified number of 1's in each row and column equivalently bipartite graphs with a specified degree sequence symmetric matrices in such classes equivalently graphs with a specified degree sequence tournament matrices with a specified number of 1's in each row equivalently tournaments with a specified score sequence nonnegative matrices with specified row and column sums and doubly stochastic matrices Most of this material is presented for the first time in book format and the chapter on doubly stochastic matrices provides the most complete development of the topic to date

Navier-Stokes Equations and Turbulence C. Foias, O. Manley, R. Rosa, R. Temam, 2001-08-27 This book aims to bridge the gap between practising mathematicians and the practitioners of turbulence theory It presents the mathematical theory of turbulence to engineers and physicists and the physical theory of turbulence to mathematicians The book is the result of many years of research by the authors to analyse turbulence using Sobolev spaces and functional analysis In this way the authors have recovered parts of the conventional theory of turbulence deriving rigorously from the Navier Stokes equations what had been arrived at earlier by phenomenological arguments The mathematical technicalities are kept to a minimum within the book enabling the language to be at a level understood by a broad audience Each chapter is accompanied by appendices giving full details of the mathematical proofs and subtleties This unique presentation should ensure a volume of interest to mathematicians engineers and physicists

Semimodular Lattices Manfred Stern, 1999-05-13 In *Semimodular Lattices* Manfred Stern uses successive generalizations of distributive and modular lattices to outline the development of semimodular lattices from Boolean algebras He focuses on the important theory of semimodularity its many ramifications and its applications in discrete mathematics combinatorics and algebra The book surveys and analyzes Garrett Birkhoff's concept of semimodularity and the various related concepts in lattice theory and it presents theoretical results as well as applications in discrete mathematics group theory and universal algebra Researchers in lattice theory discrete mathematics combinatorics and algebra will find this book valuable

Finite Fields Rudolf Lidl, Harald Niederreiter, 1997 This book is devoted entirely to the theory of finite fields

Geometric Tomography Richard J. Gardner, 1995-09-29 Develops the new field of retrieving information about geometric objects from projections on planes

Handbook of Categorical Algebra: Volume 3, Sheaf Theory Francis Borceux, 1994-12-08 The *Handbook of Categorical Algebra* is intended to give in three volumes a rather detailed account of what ideally everybody working in category theory should know whatever the specific topic of research they have chosen The book is planned also to serve as a reference book for both specialists in the field and all those using category theory as a tool Volume 3 begins with the essential aspects of the theory of locales proceeding to a study in chapter 2 of the sheaves on a locale and on a topological space in their various equivalent presentations functors étale maps or W sets Next this situation is generalized to the case of sheaves on a site and the corresponding notion of Grothendieck topos is introduced Chapter 4 relates the theory of Grothendieck toposes with that of accessible categories and sketches by proving the existence of a classifying topos for all coherent theories

Mathematical Constants Steven R. Finch, 2003-08-18 Steven Finch provides 136 essays each devoted to a mathematical constant or a class of constants from the well known to the highly exotic This book is helpful both to readers seeking information about a specific constant and to readers who desire a panoramic view of all constants coming from a particular field for example combinatorial enumeration or geometric optimization Unsolved problems appear virtually everywhere as well This work represents an outstanding scholarly attempt to bring together all significant mathematical constants in one place

Lie's Structural Approach to PDE

Systems Olle Stormark, 2000-06-15 Here is a lucid and comprehensive introduction to the differential geometric study of partial differential equations PDE The first book to present substantial results on local solvability of general and nonlinear PDE systems without using power series techniques it describes a general approach to PDE systems based on ideas developed by Lie Cartan and Vessiot The central theme is the exploitation of singular vector field systems and their first integrals These considerations naturally lead to local Lie groups Lie pseudogroups and the equivalence problem all of which are covered in detail This book will be a valuable resource for graduate students and researchers in partial differential equations Lie groups and related fields

Sperner Theory Konrad Engel, 1997-01-28 The starting point of this book is Sperner's theorem which answers the question What is the maximum possible size of a family of pairwise with respect to inclusion subsets of a finite set This theorem stimulated the development of a fast growing theory dealing with external problems on finite sets and more generally on finite partially ordered sets This book presents Sperner theory from a unified point of view bringing combinatorial techniques together with methods from programming linear algebra Lie algebra representations and eigenvalue methods probability theory and enumerative combinatorics Researchers and graduate students in discrete mathematics optimisation algebra probability theory number theory and geometry will find many powerful new methods arising from Sperner theory

Operator Methods in Mathematical Physics Jan Janas, Pavel Kurasov, A. Laptev, Sergei Naboko, 2013-01-08 The conference Operator Theory Analysis and Mathematical Physics OTAMP is a regular biennial event devoted to mathematical problems on the border between analysis and mathematical physics The current volume presents articles written by participants mostly invited speakers and is devoted to problems at the forefront of modern mathematical physics such as spectral properties of CMV matrices and inverse problems for the non classical Schrödinger equation Other contributions deal with equations from mathematical physics and study their properties using methods of spectral analysis The volume explores several new directions of research and may serve as a source of new ideas and problems for all scientists interested in modern mathematical physics

An Algebraic Introduction to K-Theory Bruce A. Magurn, 2002-05-20 This is an introduction to algebraic K theory with no prerequisite beyond a first semester of algebra including Galois theory and modules over a principal ideal domain The presentation is almost entirely self contained and is divided into short sections with exercises to reinforce the ideas and suggest further lines of inquiry No experience with analysis geometry number theory or topology is assumed Within the context of linear algebra K theory organises and clarifies the relations among ideal class groups group representations quadratic forms determinants quadratic reciprocity and Brauer groups of fields By including introductions to standard algebra topics tensor products localisation Jacobson radical chain conditions Dedekind domains semi simple rings exterior algebras the author makes algebraic K theory accessible to first year graduate students and other mathematically sophisticated readers Even if your algebra is rusty you can read this book the necessary background is here with proofs
