Scott, 1997 *Avoiding Inelastic Strains in Solder Joint Interconnections of IC Devices* Ephraim Suhir, 2021-01-27 Avoiding Inelastic Strains in Solder Joint Interconnections of IC Devices addresses analytical mathematical modeling approaches aimed at understanding the underlying physics and mechanics of the behavior and performance of solder materials and solder joint interconnections of IC devices The emphasis is on design for reliability including probabilistic predictions of the solder lifetime Describes how to use the developed methods of analytical predictive modeling to minimize thermal stresses and strains in solder joint of IC devices Shows how to build the preprocessing models in finite element analyses FEA by comparing the FEA and analytical data Covers how to design the most effective test vehicles for testing solder joints Details how to design and organize in addition to or sometimes even instead of highly accelerated life tests HALT highly focused and highly cost effective failure oriented accelerated testing FOAT to understand the physic of failure of solder joint interconnections Outlines how to convert the low cycle fatigue conditions into elastic fatigue conditions and to assess the fatigue lifetime in such cases Illustrates ways to replace time and labor consuming expensive and possibly misleading temperature cycling tests with simpler and physically meaningful accelerated tests This book is aimed towards professionals in electronic and photonic packaging electronic and optical materials materials engineering and mechanical design Seismic Assessment and Retrofit of Reinforced Concrete Buildings fib Fédération internationale du béton, 2003-08-01 In most parts of the developed world the building stock and the civil infrastructure are ageing and in constant need of maintenance repair and upgrading Moreover in the light of our current knowledge and of modern codes the majority of buildings stock and other types of structures in many parts of the world are substandard and deficient This is especially so in earthquake prone regions as even there seismic design of structures is relatively recent In those regions the major part of the seismic threat to human life and property comes from old buildings Due to the infrastructure s increasing decay frequently combined with the need for structural upgrading to meet more

stringent design requirements especially against seismic loads structural retrofitting is becoming more and more important and receives today considerable emphasis throughout the world In response to this need a major part of the fib Model Code 2005 currently under development is being devoted to structural conservation and maintenance More importantly in recognition of the importance of the seismic threat arising from existing substandard buildings the first standards for structural upgrading to be promoted by the international engineering community and by regulatory authorities alike are for seismic rehabilitation of buildings This is the case for example of Part 3 Strengthening and Repair of Buildings of Eurocode 8 i e of the draft European Standard for earthquake resistant design and which is the only one among the current 2003 set of 58 Eurocodes attempting to address the problem of structural upgrading It is also the case of the recent 2001 ASCE draft standard on Seismic evaluation of existing buildings and of the 1996 Law for promotion of seismic strengthening of existing reinforced concrete structures in Japan As noted in Chapter 1 of this Bulletin fib as CEB and FIP did before has placed considerable emphasis on assessment and rehabilitation of existing structures The present Bulletin is a culmination of this effort in the special but very important field of seismic assessment and rehabilitation It has been elaborated over a period of 4 years by Task Group 7.1 Assessment and retrofit of existing structures of fib Commission 7 Seismic design a truly international team of experts representing the expertise and experience of all the important seismic regions of the world In the course of its work the team had six plenary two day meetings in January 1999 in Pavia Italy in August 1999 in Raleigh North Carolina in February 2000 in Queenstown New Zealand in July 2000 in Patras Greece in March 2001 in Lausanne Switzerland and in August 2001 in Seattle Washington In October 2002 the final draft of the Bulletin was presented to public during the 1st fib Congress in Osaka It was also there that it was approved by fib Commission 7 Seismic Design The contents is structured into main chapters as follows 1 Introduction 2 Performance objectives and system considerations 3 Review of seismic assessment procedures 4 Strength and deformation capacity of non seismically detailed components 5 Seismic retrofitting techniques 6 Probabilistic concepts and methods 7 Case studies

Fluid Effects in Polymers and Polymeric Composites Y. Jack Weitsman, 2011-11-18 Fluid Effects in Polymers and Polymeric Composites written by the late Dr Y Jack Weitsman addresses the wide range of parameters that affect the interaction of fluids with polymers and polymeric composites The book aims at broadening the scope of available data mostly limited up to this time to weight gain recordings of fluid ingress into polymers and composites to the practical circumstances of fluctuating exposure Various forms of experimental data are given in conjunction with theoretical models derived from basic scientific principles and correlated with severity of exposure conditions and interpreted by means of rationally based theoretical models The practical implications of the effects of fluids are discussed The issue of fluid effects on polymers and polymeric composites is of concern to engineers and scientists active in aerospace and naval structures as an increasing portion of these structures are made of polymeric composites and employ polymeric adhesives as a joining device While the book is intended for this audience it will also interest researchers and graduate students interested in the mechanics and materials aspects of this matter
