Atlas of the Central Nervous System in Man

by RICHARD A. MILLER, PH.D., and ETHEL BURACK, M.D., 63 pp., ill., Williams & Wilkins Co., Baltimore, 1968. \$9.75

This student atlas of the central nervous system is based upon Weigert brain sections prepared by the late R. S. Cunningham which have been used as part of a teaching collection for many years. The atlas consists of 63 full-page plates reproduced by a quality offset process. Six plates are of transverse spinal sections, 32 plates are of transverse brainstem sections, and 25 plates are of sagittal brainstem sections. The authors have used the Paris Anatomical Nomenclature in conjunction with a well-devised system of code numbers that should be popular with students. This code system is facilitated by an appropriate code key appearing on the opposite page next to complete figure legends. Sections in different parts of the atlas have been enlarged different amounts. Spinal cord sections ($\times 9$) are small and do not utilize the available space. Reproductions of the lower brainstem in transverse section ($\times 4$) include large portions of the cerebellum, thus compromising the available detail in medullary sections. Sections of the medulla and pons and part of the midbrain are not as sharply stained or as crisply reproduced as those of the diencephalon. Structures in the medial part of the temporal lobe, that is, the amygdaloid complex and hippocampal formation, are poorly defined in most transverse sections. Sections through the diencephalon are superb. The series of sagittal plates is excellent and most structures are shown in fine detail; portions of the deep cerebellar nuclei are notoriously difficult to stain sharply in Weigert preparations.

The authors have prepared an excellent atlas which should be useful to students and teachers for many years. The publishers should be congratulated for the superb reproductions and the attractive format.

Teratology of the Central Nervous System

by HAROLD KALTER, 483 pp., ill., University of Chicago Press, Chicago, 1968. \$17.50

Persons interested in teratology will be indebted to the author for his diligence in reviewing almost 2,000 references. The publishers are to be congratulated for permitting all references to be given with full titles. Part 1 of this book is an excellent review of the methods of inducing malformations of the central nervous system, including hypervitaminosis A, trypan blue, and ionizing radiation.

Part 2 is a catalog of spontaneous malformations, arranged by species rather than type of defect. As a result, the reader interested in hydrocephalus must read about it in separated sections on mice, rabbits, rats, and so forth. The writing suffers thereby, because it becomes a list of cases rather than a narrative with a flow of ideas. Readability is further reduced by the "Harvard system" of citation of references in the text; some paragraphs resemble lists of stockbrokers' firms, for example, Kreshover, Knighton and Hancock (1957); Richman, Thomas and Knoikov (1957). Clinicians will find the descriptions of malformations in various mammals to be informative and interesting, but they will be disappointed that the presumably highest mammal is almost completely missing.

Teratology Of The Central Nervous System:

Teratology of the Central Nervous System Harold Kalter, 1968 **Catalog of Teratogenic Agents** Thomas H. Shepard, Ronald J. Lemire, 2004 Links information on experimental teratogenic agents with the congenital defects in human beings **Teratology of the central nervous system: induced and spontaneous malformations of laboratory, agricultural and domestic mammals** , *Teratology* C.L. Berry, D.E. Poswillo, 2012-12-06 In the fifteen years since the thalidomide disaster teratology has become a science in its own right distinct from its progenitors experimental embryology and developmental biology but bearing many of the familiar features of both parents In this growth period there have been contributions from many different scientific disciplines as diverse as molecular biology and obstetrics which have united in the field of study of congenital malformations Scientists in academic departments government research institutes and industrial pharmacology have all explored ways of evaluating the potential of drugs and chemicals to damage the embryo strict methods of screening for teratogenicity have become mandatory in most parts of the world Despite a wealth of basic information in the fields of genetics and embryology there is little concrete knowledge of the causal mechanisms of malformation in Man and even less concerning the relevance to Man of those laboratory and animal tests which decide the fate of potentially useful drugs It is timely therefore that in 1975 a group of young and active scientists and clinicians concerned with the broader implications of teratology should review the past and look to the future of this emerging speciality In this volume the editors have blended the opinions of teratologists their message presages change in many of the old and accepted areas of investigative teratology *Registry of Toxic Effects of Chemical Substances* , 1987 *Handbook of Developmental Neurotoxicology* William Slikker Jr., Louis W. Chang, 1998-08-10 The Handbook of Developmental Neurotoxicology provides a comprehensive account of the impacts mechanisms and clinical relevances of chemicals on the development of the nervous system The book is written by internationally recognized experts on developmental neurotoxicology covering subjects from basic neuro development to toxic syndromes induced by various chemicals It is an important text for both students and professionals who are interested in developmental neurobiology and neurotoxicology Written by internationally recognized experts on developmental neurotoxicology Includes extensive references Well illustrated with diagrams charts and tables Provides coverage of basic neurobiology as well as neurotoxicology

Neurodevelopmental Mechanisms in Psychopathology Dante Cicchetti, Elaine F. Walker, 2003-08-04 This volume represents a burgeoning perspective on the origins of psychopathology one that focuses on the development of the human central nervous system The contemporary neurodevelopmental perspective assumes that mental disorders result from etiologic factors that alter the normal course of brain development Defined here in its broadest sense neurodevelopment is a process that begins at conception and extends throughout the life span We now know that it is a complex process and that its course can be altered by a host of factors ranging from inherited genetic liabilities to psychosocial stressors This book

features the very best thinking in the converging fields of developmental neuroscience and developmental psychopathology. The developmental window represented is broad extending from the prenatal period through adulthood and the authors cover a broad range of etiologic factors and a spectrum of clinical disorders. Moreover the contributors did not hesitate to use the opportunity to hypothesize about underlying mechanisms and to speculate on research directions. Neural and Behavioural Teratology T. V. N. Miscellaneous appendixes including one titled Aquatic toxicity. Bibliographic references. *Research Awards Index*, 1976. **Issues and Reviews in Teratology** Harold Kalter, 2012-12-06. Teratology is at once among the oldest and youngest of human preoccupations. Coincident with man's first observations of the stars were his recordings of human and animal deformities. But such aberrancies must have occurred even earlier for although it is one of those things like evolution that cannot be proven it is nevertheless indisputable that dysmorphogenesis must have occurred from the time complex forms of life first arose on our planet and that from the beginnings of human awareness our species was conscious of such happenings. From the earliest recordings of this fascination with the form and meaning of abnormality a tortuous but continuous line extends to modern struggles to understand and control these manifestations. And now after long occupying an honorable but peripheral place in the halls of philosophical and scientific pursuits teratology has quite suddenly come to take a prominent position at the hub of a complex crossroads of human concerns. This shift in its fortune has taken several forms. Fetal maldevelopment has become the concern of environmentalists activists of various persuasions industrial organizations government agencies ethicists parents i.e. individuals and groups whose actions are impelled by apprehension. Such motives are of course not without basis the trauma of thalidomide left a scar yet raw. For still others clinicians academics experimentalists the upsurge in the interest in fetal maldevelopment is at a different level and their pursuits are broad taking external agents as but one of the causes of defective development. **Toxicity Bibliography**, 1969. **Fetal Alcohol Syndrome** Committee to Study Fetal Alcohol Syndrome, Institute of Medicine, 1996-04-15. It sounds simple. Women who drink while pregnant may give birth to children with defects so women should not drink during pregnancy. Yet in the 20 years since it was first described in the medical literature fetal alcohol syndrome FAS has proved to be a stubborn problem with consequences as serious as those of the more widely publicized crack babies. This volume discusses FAS and other possibly alcohol related effects from two broad perspectives diagnosis and surveillance and prevention and treatment. In addition it includes several real life vignettes of FAS children. The committee examines fundamental concepts for setting diagnostic criteria in general reviews and updates the

diagnostic criteria for FAS and related conditions and explores current research findings and problems associated with FAS epidemiology and surveillance In addition the book describes an integrated multidisciplinary approach to research on the prevention and treatment of FAS The committee Discusses levels of preventive intervention Reviews available data about women and alcohol abuse and treatment among pregnant women Explores the psychological and behavioral consequences of FAS at different ages Examines the current state of knowledge about medical and therapeutic interventions education efforts and family support programs This volume will be of special interest to physicians nurses mental health practitioners school and public health officials policymakers researchers educators and anyone else involved in serving families and children especially in high risk populations
