Terra Primate:

Primate Communities J. G. Fleagle, Charles Janson, Kaye Reed, 1999-10-14 Comprehensive and unique volume exploring the differences and similarities between primate communities worldwide **Primate Biogeography** Shawn M.

Lehman, John G Fleagle, 2006-11-28 Primate Biogeography is a subject rarely addressed as a discipline in its own right This comprehensive source introduces the reader to Primate Biogeography as a discipline It highlights the many factors that may influence the distribution of primates and reveals the wide range of approaches that are available to understanding the distribution of this order The biogeography of primates in the past is a major component of our understanding of their evolutionary history and is an essential component of conservation biology This book will appeal to primatologists physical anthropologists zoologists and undergraduates in these areas **Primates in Flooded Habitats** Katarzyna Nowak, Adrian A. Barnett, Ikki Matsuda, 2019-01-03 A ground breaking study of primates that live in flooded habitats around the world

Adaptive Radiations of Neotropical Primates Marilyn A. Norconk, Alfred L. Rosenberger, Paul A. Garber, 2011-06-28 This collection of 29 papers grew out of a symposium entitled Setting the Future Agenda for Neotropical Primates The symposium was held at the Department of Zoological Research National Zoological Park Washington D C on February 26 27 1994 and was sponsored by the Wenner Gren Foundation for Anthropological Research Smithsonian Institution and Friends of the National Zoo We put the symposium together with two objectives to honor Warren G Kinzey for his contributions to the growing field of platyrrhine studies and to provide researchers who work in the Neotropics with the opportunity to discuss recent developments to identify areas of research that require additional study and especially to help guide the next generation of researchers The symposium provided the opportunity to recognize Warren as a mentor and collaborator to the contribution of the study of platyrrhines Contributions to the book were expanded in order to provide a more comprehensive view of platyrrhine evolution and ecology to emphasize the interdisciplinary nature of many of these studies and to highlight the central role that New World monkeys play in advancing primatology If this volume were to require major revisions after just one more decade of research that would be a fitting testament to Warren's enthusiasm and his drive to continually update the field with new ideas and methods Tributes to Warren and a list of his publications have been published elsewhere Norconk 1994 1996 Rosenberger 1994 1995 *Primate Conservation* Prince Rainer III, 2012-12-02 Primate Conservation provides a comprehensive discussion of the conservation of many species of nonhuman primates The problems of conservation are discussed by distinguished scientists who are experts in their knowledge of the animals they write about and who have firsthand knowledge of the problems of conserving them Animals ranging from Galago to the Gorilla have been selected to serve as examples of the types of problems that conservationists face The book begins by discussing the ecology of two species of galagines in South Africa It covers factors such as their distribution habitat population densities activity patterns feeding group structure and reproduction This is followed by separate chapters on the conservation of the following

aye aye the lion tamarins of Brazil the Peruvian yellow tailed woolly monkey the toque macaque of Sri Lanka rare lion tailed monkey of South India rhesus monkeys in Northern India the gelada baboons the hanuman langur and douc langur red ouakaris black colobus monkeys lesser apes and eastern gorillas

An Introduction to Primate Conservation Serge A. Wich, Andrew J. Marshall, 2016 This book provides a comprehensive and state of the art synthesis of research principles and applied management practices for primate conservation

Primate Conservation Biology Guy Cowlshaw, Robin Dunbar, 2021-08-17 From the snub nosed monkeys of China to the mountain gorillas of central Africa our closest nonhuman relatives are in critical danger worldwide A recent report for example warns that nearly 20 percent of the world's primates may go extinct within the next ten or twenty years In this book Guy Cowlshaw and Robin Dunbar integrate cutting edge theoretical advances with practical management priorities to give scientists and policymakers the tools they need to help keep these species from disappearing forever Primate Conservation Biology begins with detailed overviews of the diversity life history ecology and behavior of primates and the ways these factors influence primate abundance and distribution Cowlshaw and Dunbar then discuss the factors that put primates at the greatest risk of extinction especially habitat disturbance and hunting The remaining chapters present a comprehensive review of conservation strategies and management practices highlighting the key issues that must be addressed to protect primates for the future

Biodiversity II Marjorie L. Reaka-Kudla, Don E. Wilson, Edward O. Wilson, 1996-09-30 The book before you carries the urgent warning that we are rapidly altering and destroying the environments that have fostered the diversity of life forms for more than a billion years With those words Edward O Wilson opened the landmark volume Biodiversity National Academy Press 1988 Despite this and other such alarms species continue to vanish at a rapid rate taking with them their genetic legacy and potential benefits Many disappear before they can even be identified Biodiversity II is a renewed call for urgency This volume updates readers on how much we already know and how much remains to be identified scientifically It explores new strategies for quantifying understanding and protecting biodiversity including New approaches to the integration of electronic data including a proposal for a U S National Biodiversity Information Center Application of techniques developed in the human genome project to species identification and classification The Gap Analysis Program of the National Biological Survey which uses layered satellite climatic and biological data to assess distribution and better manage biodiversity The significant contribution of museum collections to identifying and categorizing species which is essential for understanding ecological function and for targeting organisms and regions at risk The book describes our growing understanding of how megacenters of diversity e g rainforest insects coral reefs are formed maintained and lost what can be learned from mounting bird extinctions and how conservation efforts for neotropical primates have fared It also explores ecosystem restoration sustainable development and agricultural impact Biodiversity II reinforces the idea that the conservation of our biological resources is within reach as long as we pool resources better coordinate the efforts of existing institutions museums

universities and government agencies already dedicated to this goal and enhance support for research collections and training This volume will be important to environmentalists biologists ecologists educators students and concerned individuals Igapó (Black-water flooded forests) of the Amazon Basin Randall W. Myster, 2018-10-22 Igap forests are a common part of the Amazon whose ecosystems are critical to our shared human future The introduction addresses the structure function and dynamics of igap forests in the Amazon basin focusing on their uniqueness due to their high level of complexity defined as the many ways that different components of igap forests in the Amazon basin ecosystem interact and also on how those interactions are on a higher order compared to other tropical forests The text then breaks down the igap ecosystem using these sections 1 Igap forests over space and time 2 Water light and soils 3 The carbon cycle 4 Litter fungi and invertebrates 5 Vertebrates 6 Plant population studies 7 Plant community studies and 8 Human impacts and management Experts from around the world serve as chapter authors that review what is known about their specific part of the igap ecosystem what research they have done and also what needs to be done in the future **On the Move** Sue

Boinski, Paul A. Garber, 2000-05-15 Getting from here to there may be simple for one individual But as any parent scout leader or CEO knows herding a whole troop in one direction is a lot more complicated Who leads the group Who decides where the group will travel and using what information How do they accomplish these tasks On the Move addresses these questions examining the social cognitive and ecological processes that underlie patterns and strategies of group travel Chapters discuss how factors such as group size resource distribution and availability the costs of travel predation social cohesion and cognitive skills affect how individuals as well as social groups exploit their environment Most chapters focus on field studies of a wide range of human and nonhuman primate groups from squirrel monkeys to Turkana pastoralists but chapters covering group travel in hyenas birds dolphins and bees provide a broad taxonomic perspective and offer new insights into comparative questions such as whether primates are unique in their ability to coordinate group level activities

New World Primates Warren G. Kinzey, Edn Most papers presented in a symposium on Nov 19 1988 at the annual meeting of the American Anthropological Association in Phoenix Ariz Seasonality in Primates Diane K. Brockman, Carel P. van Schaik, 2005-11-17 The emergence of the genus Homo is widely linked to the colonization of new highly seasonal savannah habitats However until recently our understanding of the possible impact of seasonality on this shift has been limited because we have little general knowledge of how seasonality affects the lives of primates This book documents the extent of seasonality in food abundance in tropical woody vegetation and then presents systematic analyses of the impact of seasonality in food supply on the behavioural ecology of non human primates Syntheses in this volume then produce broad generalizations concerning the impact of seasonality on behavioural ecology and reproduction in both human and non human primates and apply these insights to primate and human evolution Written for graduate students and researchers in biological anthropology and behavioural ecology this is an absorbing account of how seasonality may have affected an

important episode in our own evolution The Natural History of Primates Robert W. Sussman, Donna Hart, Ian C. Colquhoun, 2022-10-20 The interest in primates from lemurs to gorillas has never been greater Primatologists are continually finding evidence in the behavior and ecology of our closest genetic relatives that sheds light on human origins So just who are these 520 species of complex and intelligent mammals inhabiting the Neotropics Africa Madagascar and Asia The Natural History of Primates provides the most current information on wild primates from experts who have studied them in their natural environments This volume provides up to date facts and figures on how groups of social primates interact with each other and the plants and other animal species in their ecosystems what they eat which predators might eat them how males and females seek mates how infants are raised and myriad other fascinating details about their visual and vocal communication their ability to craft and use tools and the varieties of locomotion they employ As human populations continue to expand into the rainforests savannas and woodlands where nonhuman primates dwell the preservation of these species becomes ever more important The Natural History of Primates is unique in its emphasis on the conservation status of primate species and its ample discussions of how humans and nonhuman primates can coexist in the twenty first century **Seed Dispersal and Frugivory** Douglas John Levey, Wesley R. Silva, Mauro Galetti, 2002 This book provides information on the historical and theoretical perspectives of biodiversity and ecology in tropical forests plant and animal behaviour towards seed dispersal and plant animal interactions within forest communities consequences of seed dispersal and conservation biodiversity and management *The Woolly Monkey* Thomas R. Defler, Pablo R. Stevenson, 2014-05-27 Woolly monkeys are large attractive and widespread primates found throughout many parts of the Amazon basin It is only in the last twenty five years or so that long term studies of woollies in their forest habitat have been successful they have not generally been successfully kept in captivity But now especially because of their size these creatures are pressed on all sides by bush meat hunters and forest fragmentation Their future is becoming critically precarious and the editors feel that it is time to showcase these animals with a full book The editors draw together a number of recent woolly monkey studies from three Amazonian countries including five taxa of woolly monkeys four of which have recently been reclassified without using new biological criteria as species rather than subspecies Groves 2001 2005 Rylands Mittermeier 2009 This volume provides a diversity of studies by well known researchers and advanced students on a wide range of subjects using newly generated data including a criticism of the recent taxonomic changes The varied information contained within The Woolly Monkey Behavior Ecology Systematics and Captive Research will help readers understand these handsome animals and will we hope energize them to contribute to their conservation *Nouragues* F. Bongers, P. Charles-Dominique, P.-M. Forget, Marc Théry, 2013-06-29 Nouragues is a tropical forest research station in French Guiana It was established in 1986 for research on natural mechanisms of forest regeneration Since then a lot of research has been done on this and related topics This book provides an overview of the main research results and focuses on plant communities vertebrate communities and

evolutionary ecology frugivory and seed dispersal and forest dynamics and recruitment The appendices give annotated checklists of plants birds mammals herpetofauna and fishes found in the same area Evolutionary Biology and Conservation of Titis, Sakis and Uacaris Adrian Barnett,2013-04-11 The first detailed collation of the evolution ecology and conservation of some of South America s least known and most endangered primates *How Primates Eat* Joanna E. Lambert,Margaret A. H. Bryer,Jessica M. Rothman,2024-07-26 Exploring everything from nutrients to food acquisition and research methods a comprehensive synthesis of the study of diet and feeding in nonhuman primates What do we mean when we say that a diet is nutritious Why can some animals get all the energy they need from eating leaves while others would perish on such a diet Why don t mountain gorillas eat fruit all day as chimpanzees do Answers to these questions about food and feeding are among the many tasty morsels that emerge from this authoritative book Informed by the latest scientific tools and millions of hours of field and laboratory work on species across the primate order and around the globe this volume is an exhaustive synthesis of our understanding of what why and how primates eat State of the art information presented at physiological behavioral ecological and evolutionary scales will serve as a road map for graduate students researchers and practitioners as they work toward a holistic understanding of life as a primate and the urgent conservation consequences of diet and food availability in a changing world Tropical Forests of the Guiana Shield D. S. Hammond,2005 The Guiana Shield is an ancient geological formation located in the northern part of South America covering an area of one million square kilometres Despite its hostile environment it is home to many unusual and highly specialized plants and animals which constitute a rich area of biodiversity Chapters in this book include hydrology nutrient cycling forest phenology insect plant interactions forest microclimate plant distributions forest dynamics and conservation and management of flora and fauna It provides a comprehensive and detailed review of the ecology biology and natural history of the forests of the area

Primate Adaptation and Evolution John Fleagle,1998-09-21 John Fleagle has improved on his 1988 text by reconceptualizing chapters and by bringing new findings in functional and evolutionary approaches to bear on his synthesis of comparative primate data The Second Edition provides a foundation upon which students can develop an understanding of our primate heritage It features up to date information gained through academic training laboratory experience and field research This beautifully illustrated volume provides a comprehensive introductory text explaining the many aspects of primate biology and human evolution Key Features Provides up to date information about many aspects of primate biology and evolution Contains a completely new chapter on primate communities Presents totally revised chapters on primate origins early anthropoids and fossil platyrrhines Includes an updated glossary new illustrations and a revised Classification of Order Primates Succeeds as the best introductory text on primate evolution because it synthesizes and allows access to primary literature
