Siracusa, 2013-04-23 Written by two preeminent authors in the field this book provides an accessible global narrative of the nuclear arms race since 1945 that focuses on the roles of key scientists military chiefs and political leaders The first book of its kind to provide a global perspective of the arms race this two volume work connects episodes worldwide involving nuclear weapons in a comprehensive narrative fashion Beginning with a discussion of the scientific research of the 1930s and 1940s and the Hiroshima decision the authors focus on five basic themes political dimensions technological developments military and diplomatic strategies and impact The history of the international nuclear arms race is examined within the context of four historical eras America s nuclear monopoly America s nuclear superiority superpower parity and the post Cold War era Information about the historical development of the independent deterrence of Britain France and China as well as the piecemeal deterrence of newcomers Israel India Pakistan and North Korea is also included as is coverage of the efforts aimed at the international control of nuclear weapons and the diplomatic architecture that underpins the global nuclear non proliferation regime

Arms Control for the Third Nuclear Age David A. Cooper, 2021-10-01 In Arms Control for the Third Nuclear Age David A Cooper offers a reappraisal of classic arms control theory that advocates for reprioritizing deterrence over disarmament In this very different era of great power rivalry this hard nosed approach will be a must read for scholars students and practitioners of nuclear arms control

**AI and the Bomb** James Johnson, 2023-01-24 Will AI make accidental nuclear war more likely If so how might these risks be reduced AI and the Bomb provides a coherent innovative and multidisciplinary examination of the potential effects of AI technology on nuclear strategy and escalation risk It addresses a gap in the international relations and strategic studies literature and its findings have significant theoretical and policy ramifications for using AI technology in the nuclear enterprise The book advances an innovative theoretical framework to consider AI technology and atomic risk drawing on insights from political psychology neuroscience computer science and strategic studies In this multidisciplinary work James Johnson unpacks the seminal cognitive psychological features of the Cold War era scholarship and offers a novel explanation of why these matter for AI applications and strategic thinking The study offers crucial insights for policymakers and contributes to the literature that examines the impact of military force and technological change

*Nuclear Command and Control Norms* Salma Shaheen, 2018-09-28 This book offers a new analytical framework for studying nuclear command and control C2 based on a comparative study of four nuclear weapons states NWS The subject of nuclear operations management has long been shrouded in secrecy and whilst the importance of nuclear C2 cannot be disputed there are few academic studies into how and why states develop these systems This volume includes a comparative study of the development of nuclear C2 by four different NWS Britain China India and Pakistan and demonstrates that despite several differences there is a central set of factors that remain constant The analytical framework

used in this study identifies key factors that can potentially shape the evolution and stability of nuclear C2. These factors include geostrategic threat environment, international norms, leadership, and control of nuclear operations, civil-military control. The book also analyses the interaction among different stakeholders within the nuclear C2 enterprise. It recognises that politicians, the military, and scientists all have key but different roles to play, and the way these stakeholders have learned to co-exist with each other is explored. This volume offers a set of dynamics that could form a global norm for nuclear C2, serving as a standard for new entrants into the nuclear club. This book will be of much interest to students of nuclear proliferation, global governance, and International Relations in general. **Professional Journal of the United States**

**Army**, 2004. *The Ages of the Incredible Hulk*. Joseph J. Darowski, 2015-11-30. The Incredible Hulk is one of the earliest Marvel Comics superheroes. Through the decades, the character and his narrative elements—the causes of Bruce Banner's transformations, the Hulk's strength, intelligence, and skin color, the stories' tone, theme, and sources of conflict—have been continually reinvented to remain relevant. This collection of new essays explores Marvel's more than five decades of Hulk comics. The contributors analyze the Hulk and his supporting cast in their shifting historical contexts, offering insights into both our popular entertainment and our cultural history. Topics include the Cold War's influence on early Incredible Hulk issues, a feminist reading of She-Hulk, and writer Peter David's focus on the AIDS crisis. **The AI Commander**. James Johnson, 2024. This book addresses the largely neglected question of how the fusion of machines into the war machine will affect the human condition of warfare. It emphasizes the mind and the mechanisms of thought, intelligence, consciousness, emotion, memory, experience, etc., to consider the effects of AI and autonomy on the human condition of war. **Parameters**, 2002. *Artificial intelligence and the future of warfare*. James Johnson, 2021-09-14. This volume offers an innovative and counter-intuitive study of how and why artificial intelligence-infused weapon systems will affect the strategic stability between nuclear-armed states. Johnson demystifies the hype surrounding artificial intelligence (AI) in the context of nuclear weapons and more broadly future warfare. The book highlights the potential multifaceted intersections of this and other disruptive technology, robotics, and autonomy, cyber-drone swarming, big data analytics, and quantum communications with nuclear stability. Anticipating and preparing for the consequences of the AI-empowered weapon systems are fast becoming a critical task for national security and statecraft. Johnson considers the impact of these trends on deterrence, military escalation, and strategic stability between nuclear-armed states, especially China and the United States. The book draws on a wealth of political and cognitive science, strategic studies, and technical analysis to shed light on the coalescence of developments in AI and other disruptive, emerging technologies. *Artificial intelligence and the future of warfare* sketches a clear picture of the potential impact of AI on the digitized battlefield and broadens our understanding of critical questions for international affairs: AI will profoundly change how wars are fought and how decision-makers think about nuclear deterrence, escalation, management, and strategic stability—but not for the reasons you might think. **Social Sciences and the Military**
