The Development Of Biological Systematics:

The Development of Biological Systematics Peter F. Stevens, 1994-12-01 A reevaluation of the history of biological systematics that discusses the formative years of the so called natural system of classification in the eighteenth and nineteenth centuries Shows how classifications came to be treated as conventions systematic practice was not linked to clearly articulated theory there was general confusion over the shape of nature botany elements of natural history and systematics were conflated and systematics took a position near the bottom of the hierarchy of sciences *The Development Of Biological Systematics* , *Biological Systematics* Igor Pavlinov, 2021-03-25 This volume reviews the historical roots and theoretical foundations of biological systematics in an approachable text The author outlines the structure and main tasks of systematics Conceptual history is characterized as a succession of scientific revolutions The philosophical foundations of systematic research are briefly reviewed as well as the structure and content of taxonomic theories Most important research programs in systematics are outlined The book includes analysis of the principal problematic issues as scientific puzzles in systematics This volume is intended for professional taxonomists biologists of various specialties students as well as all those interested in the history and theory of biology and natural sciences Key Features Considers the conceptual history of systematics as the framework of evolutionary epistemology Builds a hierarchically organized quasi axiomatic system of taxonomic theory Contends that more reductionist taxonomic concepts are less objective Supports taxonomic pluralism by non classic philosophy of science as a normal condition of systematics Documents that taxonomic puzzles result from conflict between monistic and pluralistic attitudes Related Titles de Queiroz K et al eds Phylonyms A Companion to the PhyloCode ISBN 978 1 1383 3293 5 Sigwart J D What Species Mean A User s Guide to the Units of Biodiversity ISBN 978 1 4987 9937 9 Rieppel O Phylogenetic Systematics Haeckel to Hennig ISBN 978 1 4987 5488 0 Wilkins J S Species The Evolution of the Idea 2nd ed ISBN 978 1 1380 5574 2 **Biological Systematics** Randall T. Schuh, 2000 Most students who take a course in biological systematics do so to learn how to construct a data matrix and generate and evaluate a tree of phylogenetic relationships Biological Systematics Principles and Applications by Randall T Schuh provides a welcome tool for these students and their instructors it is a comprehensive and completely new textbook the first of its kind since 1981 Systematics the study of the reconstruction of the history of life forms the underlying basis for organizing the knowledge of biology cladistics is the diagrammatic method of charting phylogenetic relationships over time among evolving life forms Cladistics analysis the key tool used in this book is also of great use outside pure systematic studies and interests many students of population biology ecology epidemiology and natural resources Suitable for both graduate and advanced undergraduate students Biological Systematics Principles and Applications covers the core material for courses in biological systematics with equal emphasis on both botany and zoology It includes sections on the history and resources of the field biological nomenclature the theory of homology character analysis and computer algorithms and the application of the results of

systematic studies in the areas of biological classification biogeography adaptation and co evolution and biodiversity and conservation

The Evolution of Phylogenetic Systematics Andrew Hamilton, 2013-11-09 The Evolution of Phylogenetic Systematics aims to make sense of the rise of phylogenetic systematics its methods its objects of study and its theoretical foundations with contributions from historians philosophers and biologists This volume articulates an intellectual agenda for the study of systematics and taxonomy in a way that connects classification with larger historical themes in the biological sciences including morphology experimental and observational approaches evolution biogeography debates over form and function character transformation development and biodiversity It aims to provide frameworks for answering the question how did systematics become phylogenetic

Coenraad Jacob Temminck and the Emergence of Systematics (1800-1850) Eulàlia Gassó Miracle, 2021-10-05 Coenraad Jacob Temminck and the Emergence of Systematics 1800 1850 is the first study to examine in detail the life and work of Coenraad Jacob Temminck 1778 1858 the Dutch naturalist who was the first director of s Rijks Museum van Natuurlijke Historie National Museum of Natural History in Leiden The Netherlands This study situates Temminck s activities in the context of European natural history during the early to the mid nineteenth century Three issues which defined the era are discussed in more detail the growing European colonial territories the rise of scientific meritocracy and the emergence of systematics as a discipline Temminck s biography elucidates how and why systematics developed and why its status within the natural sciences has been a matter of discussion for more than a century

Biological Systematics Igor Pavlinov, 2021-03-25 This volume reviews the historical roots and theoretical foundations of biological systematics in an approachable text The author outlines the structure and main tasks of systematics Conceptual history is characterized as a succession of scientific revolutions The philosophical foundations of systematic research are briefly reviewed as well as the structure and content of taxonomic theories Most important research programs in systematics are outlined The book includes analysis of the principal problematic issues as scientific puzzles in systematics This volume is intended for professional taxonomists biologists of various specialties students as well as all those interested in the history and theory of biology and natural sciences

Key Features Considers the conceptual history of systematics as the framework of evolutionary epistemology Builds a hierarchically organized quasi axiomatic system of taxonomic theory Contends that more reductionist taxonomic concepts are less objective Supports taxonomic pluralism by non classic philosophy of science as a normal condition of systematics Documents that taxonomic puzzles result from conflict between monistic and pluralistic attitudes

Homology and Systematics Robert Scotland, R. Toby Pennington, 2014-04-21 When looking at groups of organisms shared characteristics homologues provide the raw data from which hypotheses of common ancestry may be suggested In order to explore the relationship between homologues and particular hypotheses of common ancestry complex matrices are devised where homologues are coded allowing theories of homology to be developed and tested Practically nothing has been written about this matrix building process which is fundamental to our understanding of diversity and evolutionary history This book fills the gap by discussing the ways observations are coded and the consequences for resulting hypotheses using case studies and theoretical examples

Organizing the Green World: A Conceptual History of Botanical Classification Tod F. Stuessy, 2025-09-02 This book focuses on plant systematics and evolution with special interest on the history and philosophy of botanical classification Tracing the history of how humans have dealt with ordering the plant world is very much a glimpse of how human culture and science have progressed over the past 2000 years The objective in this book is to present ideas on plant classification beginning with classical Greek and Roman scholars through the Middle Ages into the Renaissance and finally to the modern 21st century Significant quantitative methods in classification have originated within the past 70 years which have never before been integrated with previous historical perspectives Most textbooks of systematic botany contain an historical introduction or perhaps a chapter on the history of classification but this book presents much greater detail on the classifications themselves and the cultural dimensions of the different time periods Biographical detail is also provided to give a better appreciation of the individual botanists who have contributed new ideas in the search for maximally predictive systems

Phylogenetic Systematics Willi Hennig, 1999 Phylogenetic Systematics first published in 1966 marks a turning point in the history of systematic biology Willi Hennig's influential synthetic work arguing for the primacy of the phylogenetic system as the general reference system in biology generated significant controversy and opened possibilities for evolutionary biology that are still being explored

Science in the Enlightenment William E. Burns, 2003-11-17 The first introductory A Z resource on the dynamic achievements in science from the late 1600s to 1820 including the great minds behind the developments and science's new cultural role Though the Enlightenment was a time of amazing scientific change science is an often neglected facet of that time Now Science in the Enlightenment redresses the balance by covering all the major scientific developments in the period between Newton's discoveries in the late 1600s to the early 1800s of Michael Faraday and Georges Cuvier Over 200 A Z

entries explore a range of disciplines including astronomy and medicine scientists such as Sir Humphry Davy and Benjamin Franklin and instruments such as the telescope and calorimeter Emphasis is placed on the role of women and proper attention is given to the shifts in the worldview brought about by Newtonian physics Antoine Laurent Lavoisier's chemical revolution and universal systems of botanical and zoological classification Moreover the social impact of science is explored as well as the ways in which the work of scientists influenced the thinking of philosophers such as Voltaire and Denis Diderot and the writers and artists of the romantic movement The Quest for the Invisible Marc J. Ratcliff, 2016-02-24 The eighteenth century has often been viewed as a period of relative decline in the field of microscopy as interest in microscopes seemed to wane after an intense period of discovery in the seventeenth century As such developments in the field during the Enlightenment have been largely overlooked This book therefore fills a considerable gap in the study of this life science providing a thorough analysis of what the main concerns of the field were and how microscopists learned to communicate with each other in relevant ways in order to compare results and build a new discipline Employing a substantial body of contemporary literature from across Europe Marc J Ratcliff is able to present us with a definitive account of the state of research into microscopy of the period He brings to light the little known work of Louis Joblot re evaluates the achievements of Abraham Trembley and gives new weight to Otto Friedrich M ller's important contributions The book also connects changes in instrument design to an innovative account of microscopical research during the eighteenth century and the rich social networks of communication that grew during this period Investigating the history of microscopical research from 1680 up to 1800 also shows how scholars progressively established a modern rule on which to shape their new discipline balancing microscopical magnification with shared vision This rule developed in response to the diminishing size of the microscopical object during the course of the eighteenth century from dry minute organisms such as insects to aquatic minute bodies such as polyps and finally to aquatic invisible organisms thus completing the scholar's quest to study the invisible This book will be essential reading for historians of microscopy epistemologists and for historians of the life sciences in the modern period

Annals of the History and Philosophy of Biology 10/2005, 2006 The name DGGB Deutsche Gesellschaft für Geschichte und Theorie der Biologie German Society for the History and Theory of Biology reflects recent history as well as German tradition The Society is a relatively late addition to a series of German societies of science and medicine that began with the Deutsche Gesellschaft für Geschichte der Medizin und der Naturwissenschaften founded in 1910 by Leipzig University's Karl Sudhoff 1853-1938 who wrote We want to establish a German society in order to gather German speaking historians together in our special disciplines so that they form the core of an international society Yet Sudhoff at this time of burgeoning academic internationalism was quite willing to accommodate the wishes of a number of founding members and drop the word German in the title of the Society and have it merge with an international society The founding and naming of the Society at that time derived from a specific set of historical circumstances and the same was true some 80 years later when in 1991 in the wake of German reunification the Deutsche Gesellschaft für Geschichte und Theorie der Biologie was founded From the start the Society has been committed to bringing studies in the history and philosophy of biology to a wide audience using for this purpose its Jahrbuch für Geschichte und Theorie der Biologie Parallel to the Jahrbuch the Verhandlungen zur Geschichte und Theorie der Biologie has become the by now traditional medium for the publication of papers delivered at the Society's annual meetings In 2005 the Jahrbuch was renamed Annals of the History and Philosophy of Biology reflecting the Society's internationalist aspirations in addressing comparative biology as a subject of
