The Desert Michael Welland,2014-09-15 From endless sand dunes and prickly cacti to shimmering mirages and green oases deserts evoke contradictory images in us They are lands of desolation but also of romance of blistering Mojave heat and biting Gobi cold Covering a quarter of the earth s land mass and providing a home to half a billion people they are both a physical reality and landscapes of the mind The idea of the desert has long captured Western imagination put on display in films and literature but these portrayals often fail to capture the true scope and diversity of the people living there Bridging the scientific and cultural gaps between perception and reality The Desert celebrates our fascination with these arid lands and their inhabitants as well as their importance both throughout history and in the world today Covering an immense geographical range Michael Welland wanders from the Sahara to the Atacama depicting the often bizarre adaptations of plants and animals to these hostile environments He also looks at these seemingly infertile landscapes in the context of their place in history as the birthplaces not only of critical evolutionary adaptations civilizations and social progress but also of ideologies Telling the stories of the diverse peoples who call the desert home he describes how people have survived there their contributions to agricultural development and their emphasis on water and its scarcity He also delves into the allure of deserts and how they have been used in literature and film and their influence on fashion art and architecture As Welland reveals deserts may be difficult to define but they play an active role in the evolution of our global climate and society at large and their future is of the utmost importance Entertaining informative and surprising The Desert is an intriguing new look at these seemingly harsh and inhospitable landscapes
