New Product Development Tim Jones, 1997 New Product Development presents a unique cross discipline approach to new product development and goes further than most product design books by drawing together the various strands that make up total design now the accepted way to develop new products The successful development of new products has become a complex process involving contributions from a range of different disciplines Rarely is one individual responsible for the inception creation and realisation of a new product for today the inherent complexity of products markets and the processes through which they are developed dictates that a number of functions each with their own roles work together to create the product This book presents a cross discipline discussion of new product development its organisation its management the key stages and key functions involved Through the use of six major case studies and numerous mini cases the author demonstrates how a number of manufacturing companies have successfully illustrated separate elements into the new product development process Extensive use of photographs Includes case studies of Rover Flymo Logitech and Polaroid Provides a balanced overview of an often misunderstood process

System Configuration Management Jacky Estublier, 2003-07-31 This workshop series is now over ten years old which is a pretty long time for a very focussed topic Configuration Management The first conference took place in 1988 Grassau Germany and the topics were focussed on version control and rebuilding Many people consider that SCM is one of the few areas of software engineering that can be considered to be really successful Products that more or less fulfill their purpose exist and everybody agrees that they are now mandatory for a successful software project Indeed during the second half of the nineties SCM has entered a maturation phase in which good commercial products have been incorporating many of the features signed and discussed at previous conferences of this workshop With the generalization of commercial products the question now is What are the objectives of a scientific workshop on this topic Is there any more research to be done in SCM

today This ninth volume in the series reflects pretty well the current state and mood in the CM community There are an unprecedented number of papers discussing the current state of the art and trying to identify research directions session 6 On some core topics like versioning session 3 and following SCM8 tracks papers present work on unified models Versioning models after years of raging discussions now seem to have found a consensus [Creating Knowledge-based Healthcare Organizations](#) Nilmini Wickramasinghe,Jatinder N. Model-Based Software Performance Analysis Vittorio Cortellessa, Antinisca Di Marco, Paola Inverardi, 2011-05-05 Poor performance is one of the main quality related shortcomings that cause software projects to fail. Thus the need to address performance concerns early during the software development process is fully acknowledged and there is a growing interest in the research and software industry communities towards techniques, methods and tools that permit to manage system performance concerns as an integral part of software engineering. Model-based software performance analysis introduces performance concerns in the scope of software modeling thus allowing the developer to carry on performance analysis throughout the software lifecycle. With this book Cortellessa, Di Marco and Inverardi provide the cross knowledge that allows developers to tackle software performance issues from the very early phases of software development. They explain the basic concepts of performance analysis and describe the most representative methodologies used to annotate and transform software models into performance models. To this end they go all the way from performance primers through software and performance modeling notations to the latest transformation-based methodologies. As a result their book is a self-contained reference text on software performance engineering from which different target groups will benefit: professional software engineers and graduate students in software engineering will learn both basic concepts of performance modeling and new methodologies while performance specialists will find out how to investigate software performance model building.
