The Geochronology Of Equatorial Africa:

The Geochronology of Equatorial Africa Lucien Cahen, N. J. Snelling, 1966 *The Geochronology of Equatorial Africa*, by L. Cahen and N.J. Snelling Lucien Cahen, 1966 The geochronology of equatorial Africa L. Cahen, N. J. Snelling, 1966 **Geology and Resource Potential of the Congo Basin** Maarten J. de Wit, François Guillocheau, Michiel C. J. de Wit, 2015-01-02 This book summarizes the geomorphology geology geochronology geophysics and mineral resources of the Congo Basin one of the world's most enigmatic and poorly understood major intra continental sedimentary basins and its flanking areas of Central Africa It provides an up to date analysis of the large region's origin and evolution The book's nineteen chapters take the reader through the entire basement history as well as the Basin's ca 700 million years of cover sequences Starting from its Archean cratons and Proterozoic mobile belts and proceeding through the Phanerozoic sequences including the most recent Cenozoic successions the book also explores the present drainage systems and the subtle but complex topography of the Congo Basin It also presents and evaluates new basin models and related dynamic processes as well as revised correlation schemes with its Gondwana counterparts in South America all of which provide key insights into its rich diamond deposits and other mineral wealth which are documented in the final chapters A specific feature of this book is its synthesis performed by teams of active experts of a vast amount of geoscientific data previously only recorded in research reports company reports survey bulletins and scattered journal articles and books The sheer size of the Congo Basin ca 1.8 million km² or just under half the area of the EU and Central Africa some 7 million km² or more than 70% of the area of the USA will make this a sought after source of information and inspiration on this unique region

Geological Atlas of Africa Thomas Schlüter, 2008-04-19 This atlas is intended primarily for anybody who is in some background for the arrangement of how the terrestrial basic geology of Africa Its originality lies in that the atlas was done The second chapter is devoted to the fact that the regional geology of each African country is reviewed country wise by maps for a fuller appreciation of why this work in Africa is and text a view normally not presented in textbooks worth doing Chapter 3 provides an executive summary of regional geology It is my belief that there has long been a need in universities and geological surveys whole i.e. in the context of no political boundaries both in Africa and in the developed world for such a summary The main part of the atlas lies in Chapter 4 where in summarizing geological maps and an accompanying basic alphabetical order each African country or territory text utilising the enormous fund of knowledge that is presented by a digitized geological overview map has been accumulated since the beginning of geological and an accompanying text on its respective stratigraphical research in Africa in the mid 19th century I hope that the present atlas may satisfy this need geosites A short list of relevant references is also added **Southern Hemisphere Paleo- and Neoclimates** Peter

Smolka,Wolfgang Volkheimer,2012-12-06 Climate models show that climate change is not a uniform process Areas of increased temperature are situated near areas of decreased temperature areas with increased precipitation adjoin areas of drought This is one of the reasons why climate change is so difficult to detect Any parameter must be considered and tested locally or regionally and not on an average globally This book gives an overview of current research methods and results in the different fields of climate research including modelling In addition it contains a hemisphere wide stratigraphic data base with about 80000 species All paleoclimatic data as well as a state of the art atmospheric circulation model in a PC version are included So both research and graduate teaching are supported with high end software running on affordable computers also in those countries that have no access to Cray super computers Thus this book will be of interest to all researchers and scientists in the field of climatology *Geoscientific Research in Northeast Africa* Heinz Schandelmeier,Ulf

Thorweihe,2017-12-14 This volume focuses on approaches towards a better understanding of the geological hydrogeological and paleoclimatic evolution of Northeast Africa Among the topics discussed are Phanerozoic interplate dynamics sedimentology and stratigraphy and mineral deposits and metallogeny **Review of African Granulites and Related**
