The Golden Of Astronomy:

Chronicling the Golden Age of Astronomy Neil English, 2018-10-31 The invention of the telescope at the dawning of the 17th century has revolutionized humanity's understanding of the Universe and our place within it. This book traces the development of the telescope over four centuries as well as the many personalities who used it to uncover brand new revelations about the Sun, Moon, planets, stars, and distant galaxies. Starting with early observers such as Thomas Harriot, Galileo, Johannes Hevelius, Giovanni Domenico Cassini, Robert Hooke, and Christian Huygens, the book explores how these early observers arrived at essentially correct ideas concerning the objects they studied. Moving into the 18th and 19th centuries, the author describes the increasing sophistication of telescopes, both large and small, and the celebrated figures who used them so productively, including the Herschels, Charles Messier, William Lassell, and the Earls of Rosse. Many great discoveries were also made with smaller instruments when placed in the capable hands of the Struve dynasty, F. W. Bessel, Angelo Secchi, and S. W. Burnham, to name but a few. Nor were all great observers of professional ilk. The book explores the contributions made by the clerical astronomers William Rutter Dawes, Thomas William Webb, T. E. R. Philips, and T. H. E. C. Espin, as well as the lonely vigils of E. E. Barnard, William F. Denning, and Charles Grover. And in the 20th century, the work of Percival Lowell, Leslie Peltier, Eugene M. Antoniadi, Clyde Tombaugh, Walter Scott Houston, David H. Levy, and Sir Patrick Moore is fully explored. Generously illustrated throughout, this treasure trove of astronomical history shows how each observer's work led to seminal developments in science and providing key insights into how we go about exploring the heavens today. *The Golden Book of Astronomy* Rose Wyler, Gerald Ames, 1955 This magnificent new book filled with over 200 illustrations in color is overflowing with facts about the stars, sun, moon, planets, comets, asteroids, and neulae. It explains simply and clearly the marvelous phenomena of the heavens as well as time, gravity, and the earth's seasons and tides. Publisher's description.
