Stellar Spectral Classification Richard O.

Gray, Christopher J. Corbally, 2021-06-08 Written by leading experts in the field *Stellar Spectral Classification* is the only book to comprehensively discuss both the foundations and most up to date techniques of MK and other spectral classification systems. Definitive and encyclopedic, the book introduces the astrophysics of spectroscopy, reviews the entire field of stellar astronomy, and shows how the well tested methods of spectral classification are a powerful discovery tool for graduate students and researchers working in astronomy and astrophysics. The book begins with a historical survey followed by chapters discussing the entire range of stellar phenomena from brown dwarfs to supernovae. The authors account for advances in the field including the addition of the L and T dwarf classes, the revision of the carbon star Wolf Rayet and white dwarf classification schemes, and the application of neural nets to spectral classification. Copious figures illustrate the morphology of stellar spectra, and the book incorporates recent discoveries from earth based and satellite data. Many examples of spectra are given in the red, ultraviolet, and infrared regions as well as in the traditional blue-violet optical region, all of which are useful for researchers identifying stellar and galactic spectra. This essential reference includes a glossary, handy appendixes, and tables, an index, and a Web-based resource of spectra. In addition to the authors, the contributors are Adam J. Burgasser, Margaret M. Hanson, J. Davy Kirkpatrick, and Nolan R. Walborn.

Principles and Perspectives in Cosmochemistry Aruna Goswami, B. Eswar Reddy, 2010-03-19 A fundamental question in contemporary astrophysics is the origin of the elements. Cosmochemistry seeks to answer when, how, and where the chemical elements arose. Quantitative answers to these fundamental questions require a multi-disciplinary approach involving stellar evolution, explosive nucleosynthesis, and nuclear reactions in different astrophysical environments. There remain, however, many outstanding problems, and cosmochemistry remains a fertile area of research. This book is among the first in recent times to put together the essentials of cosmochemistry, combining contributions from leading astrophysicists in the field. The chapters have been organized to provide a clear description of the fundamentals, an introduction to modern techniques such as computational modelling, and glimpses of outstanding issues.
