The Genetic Diet:

The DNA Diet Kate Llewellyn-Waters, 2018-01-03 We are all totally unique and individual and genetically there is no one like you so why eat or exercise like someone else Nutrigenomics provides us with the information and knowledge we need to personalise our diet fitness and take charge of our health The DNA Diet book will revolutionise your thoughts and habits about the way you choose to manage your diet and exercise Low Carb Low Fat or Mediterranean Diet which one is genetically appropriate for you The author Kate your very own Gene Genie explains how you can use your individual DNA to find out how to achieve the ultimate healthy lifestyle for you This is the key to you finding out about your ultimate and optimum Plan for Life

The Gene Smart Diet Floyd H. Chilton, 2009-06-09 Draws on discoveries in the field of nutrigenomics to explain how basic adjustments in a diet may help influence the course of genetic predispositions challenging popular beliefs about such topics as starvation diets antioxidants and omega 3 fats 35 000 first printing

The Perfect Gene Diet Pamela McDonald, N.P., 2010-10-10 This comprehensive work by nurse practitioner Pamela McDonald reveals the latest breakthrough in health and nutrition focusing on the APO E gene which affects cholesterol levels heart and Alzheimer s disease and much more It is widely known that each genotype requires its own balance of carbohydrates fats and proteins for optimal health Within these pages Pamela presents the latest information so that you can make appropriate diet and exercise choices relevant to your particular APO E genotype The result will be an ideal level of health and well being which will reduce your likelihood of developing so many of the debilitating diseases that are prevalent in our society today As Pamela says You have a choice for your health backpack or bedpan

Genome-based Nutrition Strategies for Preventing Diet-related Chronic Diseases: Where Genes, Diet, and Food Culture Meet Arturo Panduro, Omar Ramos-Lopez, Claudia Ojeda-Granados, 2024-07-02 Human populations that have recently undergone substantial changes in their traditional social cultural and dietary habits have shown an increased susceptibility to developing chronic diet related diseases concerning their genetic background One factor is that the population s adaptive genetic variants related to its evolutionary history are exposed to different physical and lifestyle environments that underlie and influence the current patterns of disease risk Under this perspective the current obesogenic environment has promoted the acculturation of a westernized diet disrupting the ancestral gene foods nutrients bioactive compounds interactions i e ancestral genetic ethnic profile vs modern lifestyle Modern lifestyles including unhealthy dietary patterns have further impaired the consumption of staple foods with essential nutrients and functional properties increasing the incidence of obesity and associated comorbidities However most conventional nutrition approaches targeting chronic diseases have limited impact on managing the leading non communicable diseases affecting modern societies

The Genetic Diet Seymour L. Myers, 2000-10 After nearly half a century in family practice I have written a book outlining a rationale for identifying the human animal as essentially carnivorous I have lectured to small groups suggesting that many of the ills of man could be traced to dietary

indiscretion as he deviated from his genetically programmed feeding habits That many were impressed by my discussions served my vanity well but most importantly suggested that there could be a need for a concept with broad appeal in the lay community and could even stimulate some interest in academia I found supportive evidence for my views and conceived the idea that I could present to the public a feeding program which would as closely as possible be consistent with the feeding practices of our ancestors My interest in nutrition actually antedated my training in medicine when as a student I came upon the writings of Vilhjalmur Stefansson who preached carnivorousness Roger Williams who espoused the concept of biochemical individuality Marvin Harris who described the feeding behavior of the human in rational terms and Reay Tannahill who explored the history of the feeding habits of humans The major focus of the book is that we might avoid the modern diseases of degeneration such as diabetes arteriosclerosis osteoporosis arthritis mental retardation and deterioration obesity and other eating disorders hyperlipidemia anemia vitamin deficiencies and possibly tumors in general by excluding certain dietary elements so that we can grow old in the best of health Essentially I have indicated that it is my view however revolutionary that dairy foods and grass seeds grain are to be avoided if it is possible for the human animal to feed otherwise I have attempted to compare feeding customs in our society to those of our primitive contemporaries to those of our recent ancestors and to those of our more remote ancestors With some exceptions I have taken up the human as he existed after the last glacier some ten to twelve thousand years ago and have followed him to the present The key elements of my discussion are genetic influences carnivorousness excessive consumption and inappropriate choices Though I have mentioned some disorders specifically and others more generally I have not made therapeutic recommendations directed toward particular diseases as others have done The book is therefore not intended to be a treatment manual I have provided no recipes as others have done so my book is not a cookbook I recognize that other books touch on many of the subjects I discuss but none of these proposes that carnivorousness may be the ideal and that the use of other foods is a compromise at best The information presented has come from hundreds of sources published over a period of at least a century in a wide variety of publications I list as recommended reading major sources of information which have served me well and may further enlighten the interested reader I include a glossary of terms since in many instances my language may include terms unfamiliar to the average layman The book is primarily intended for the lay public but may also be of interest to students and practitioners of nutrition and will hopefully further their interest in the genetic origins of our nutritional requirements The following subjects are discussed Biochemical Individuality Our Primitive Ancestors Contemporary Primitive Societies Genetics Ancestry Nutrition Malnutrition Starvation Food in General Meat Milk Dairy Products Breast Milk Infant Feeding Vegetarianism Excess Consumption Obesity Diet Disease Particular Requirements Activity Exercise Feeding the Brain Health Foods Junk Foods Food Allergies Adaptation Ethnic Influences Biblical Admonitions Carbohydrates **Genetic Variation and Dietary Response** A. P. Simopoulos, P. J. Nestel, Berthold Koletzko, 1997 This timely volume focuses on genetics and nutrition and

their interaction in the development of chronic diseases Knowledge of genetic susceptibility to disease will not only help to identify those at higher risk for disease but also to ascertain their response to diet The prospect of targeting specific dietary treatment at those predicted to gain the most therapeutic benefit clearly has important clinical and economic consequences particularly in diseases of high prevalence This book is unique in considering genetic variation in susceptibility to disease and the importance of specific diets in influencing lipid levels in cardiovascular disease and bone density in osteoporosis The contributions emphasize that dietary response is dependent on the genetic variant and that specific dietary recommendations rather than universal ones are needed for the prevention and management of chronic diseases Bringing together vital information for the first time this book is important reading for physicians nutritionists dietitians geneticists physiologists molecular biologists food technologists and policymakers
