R Champneys, 2002-08-01 Nonlinear dynamics has been successful in explaining complicated phenomena in well defined low dimensional systems Now it is time to focus on real life problems that are high dimensional or ill defined for example due to delay spatial extent stochasticity or the limited nature of available data How can one understand the dynamics of such sys **The Super-Evolution of Semiconductors** Tadahiro Kuroda, 2024-07-20 This book presents the author's view of how the global semiconductor industry will evolve based on recent megatrends not only in the industry but also in society including the rapid proliferation of AI the global semiconductor shortage the rising importance of semiconductors in the value chain and the movement to democratize semiconductors It describes and explains major transformations taking place in the industry as a result which necessitate significant changes not only to its technology but also its economic model and industrial structure Finally the book elaborates on the author's theory of super evolution of

semiconductors that will lead to the success of the industry in the emerging knowledge based digital society Dynamics of Complex Autonomous Boolean Networks David P. Rosin, 2014-12-31 This thesis focuses on the dynamics of autonomous Boolean networks on the basis of Boolean logic functions in continuous time without external clocking These networks are realized with integrated circuits on an electronic chip as a field programmable gate array FPGA with roughly 100 000 logic gates offering an extremely flexible model system It allows fast and cheap design cycles and large networks with arbitrary topologies and coupling delays The author presents pioneering results on theoretical modeling experimental realization and selected applications In this regard three classes of novel dynamic behavior are investigated i Chaotic Boolean networks are proposed as high speed physical random number generators with high bit rates ii Networks of periodic Boolean oscillators are home to long living transient chimera states i e novel patterns of coexisting domains of spatially coherent synchronized and incoherent desynchronized dynamics iii Excitable networks exhibit cluster synchronization and can be used as fast artificial Boolean neurons whose spiking patterns can be controlled This work presents the first experimental platform for large complex networks which will facilitate exciting future developments
