The Gene Business Who Should Control Biotechnology:

The Gene Business Edward Yoxen, 1986 The Gene Business the first detailed analytic study of the corporate agenda for biotechnology takes a close look at the for profit use of genetic engineering and molecular biology Alarmed by the possible long term effects of corporate controlled university research which has already led to the cloning of fast growing trees in the Amazon and the replacement of basic Third World crops by supercrops Yoxen provides a readable account of how genetic engineering evolved from a pure science into a profitable business He examines the structure of today's multinational gene business the effects it has had to date and its scientific economic social and political implications **CLONING the**

BUDDHA: The Moral Impact of BIOTECHNOLOGY Richard Heinberg, 1999 *Christian Ethics in Secular Worlds* Robin Gill, 2004-08-23 A challenging book examining issues such as biotechnology AIDS and nuclear weapons and demonstrating that Christian ethics has something important and distinctive to contribute to secular worlds *FutureNatural* George Robertson, 1996 We are living in an age when nature seems to be on the brink of extinction yet at the same time nature is becoming increasingly ubiquitous and unstable as a category for representation and debate Futurenatural brings together leading theorists of culture and science to discuss the concept of nature its past present and future Contributors discuss the impact on our daily life of recent developments on biotechnologies electronic media and ecological politics Increasingly scientific theories and models have been taken up as cultural metaphors that have material effects in transforming ways of seeing and structures of feeling The book addresses the issue of whether political and cultural debates about the body and environment can take place without reference to nature or the natural This collection considers how we might think a future developing from emergent scientific theories and discourses What cultural forms may be produced when new knowledges challenge and undermine traditional ways of conceiving the natural *Resources and Applications of Biotechnology* Rod Greenshields, 1989-10-10 The journal Industrial Biotechnology has for some years been spreading the word about cooperation between academic researchers and industrial biotechnologists This cooperation has been fostered by the setting up of Biotechnology Centres to promote the exchange of ideas and enterprise This volume consists of major articles from Industrial Biotechnology which reflect both the educational nature of much of the journal's output and the very wide range of its subject matter The articles cover some of the basic biological processes that are the resources of biotechnology and consider major applications in pharmaceuticals agriculture food processing biosensors and other areas The future of biotechnology and its progress in other countries is also considered This will be of vital interest for all workers in the field of biotechnology and those who have an interest in the development of this exciting and diverse field **An Introduction to Recombinant DNA** Alan E. H. Emery, 1984-11-27 After presenting a brief historical review this introduction to recombinant DNA technology deals with the essentials of the technology and the light it has shed on the molecular basis of various genetic disorders as well as common diseases such as diabetes coronary artery disease and cancer The applications of the technology

in prenatal diagnosis the synthesis of vaccines and other medically important products and treatments through gene therapy are also reviewed Some broader applications with respect to human evolution and various agricultural commercial and industrial uses are also discussed The final chapters of the book examine the biohazards ethical and legal problems raised by the technology and discuss possible future developments

Love, Power and Knowledge Hilary Rose, 2013-07-03 In this book Hilary Rose develops new terms for thinking about science and feminism locating the feminist criticism of science as both integral to the feminist movement and to the radical science movement

The Natural and the Artefactual Keekok Lee, 1999-01-01 In this book philosopher Keekok Lee challenges one of the central assumptions of contemporary environmentalism that if we could reduce or eliminate pollution we could save the planet without unduly disrupting our modern industrialized societies Lee argues instead that the process of modernization with its attendant emphasis on technological innovation has fundamentally transformed nature into just another manmade artefact Ultimately what needs to be determined is if nature has value above and beyond human considerations whether aesthetic spiritual or biological This provocative book attempts to reconfigure environmental ethics positing the existence of two separate ontological categories the natural and the artefactual Natural entities be they organisms or inert matter are morally considerable because they possess the ontological value of independence whereas artefacts are created by humans expressly to serve their own interests and ends

Modernity and Technology Søren Riis, 2024-12-13 The late Bruno Latour has come a long way since he claimed that we have never been modern and analyzed the hole in the ozone layer from an armchair From his initial analysis of modernity Latour evolved to confront the detrimental impact of modern civilization on the Earth This book contends that Latour's early and later works can be connected to the philosophy of Martin Heidegger so as to render a profound understanding of the intricate relationship between modernity and technology in our era Reconsidered in tandem these thinkers can become essential guides to help us circumvent some of the fundamental human and environmental tragedies of our time While both Latour and Heidegger illuminate the perils of our epoch they also offer a beacon of hope Through their alternative examination of human existence technology and the world around us they inspire us to envision paths toward overcoming the challenges of modernity In their interconnected philosophies lies the potential for rediscovering hope despite the pressing dangers of our age This book calls for theoretical fieldwork and a parallel reassessment of these intellectual giants and urges us to draw upon their insights in order to confront and transcend the dilemmas of our modern world

Philosophy and Revolutions in Genetics Keekok Lee, 2016-01-03 The last century saw two great revolutions in genetics the development of classic Mendelian theory and the discovery and investigation of DNA Each fundamental scientific discovery in turn generated its own distinctive technology Biotechnology is the offspring of the latter and is expected to be the driving force behind economic growth in the twenty first century These two case studies enable the author to conduct a philosophical exploration of the relationship between fundamental scientific discoveries on the one hand and the

technologies that spring from them on the other As such it is also an exercise in the philosophy of technology
