Six Roads from Newton Edward Speyer, 1994-04-29 Although he made his discoveries more than 300 years ago all roads in modern physics lead back to Sir Isaac Newton This book begins with a summary of Newton's laws and moves on to explain six of the most important theoretical developments since Newton wave theory field theory statistical probability special relativity theory quantum theory and general relativity theory *Introductory Physics*, 2010 **Unifying the Universe**

Hasan S. Padamsee, 2002-11-05 *Unifying the Universe* The Physics of Heaven and Earth provides a solid background in basic physics With a humanistic perspective it shows how science is significant for more than its technological consequences The book includes clear and well planned links to the arts and philosophies of relevant historical periods to bring science and the human

A History of Physics from Antiquity to the Enlightenment Mario Gliozzi, 2022-03-02 This book presents a general unifying view of the developments of the ideas and the experimental findings underlying the evolution of physical knowledge from classical antiquity to the Eighteenth century It is based on the study of the original sources in ancient texts and includes classical antiquity with the Hellenic Hellenistic and Greco Roman ages the Middle Ages and the Renaissance In particular the ideas which gave rise to the experimental method and to the modern approach to physical phenomena are discussed in detail Particularly original is the book's focus on Galileo Galilei and Isaac Newton **Synthesizing Systems**

Anna Darden Copeland, 2007-02-22 The purpose of this dissertation is to introduce a general reading audience to the major themes found in the fiction of Richard Powers with an emphasis on his use of science For Powers science is something more than the accumulation of technical data and the proliferation of theories developed to explain physical phenomena It is an evolving body of knowledge which has important insights to contribute into the conditions which ground human experience The close and often detailed discussions of contemporary issues in science which Powers incorporates into his fiction indicate the extent to which he sees science as an inseparable component in any attempt to understand the complexities of human experience The common ground Powers uses to link the interests of science and those of fiction into a balanced if not always harmonious pursuit of truth is wonder The limitations placed on science during this century do not undermine the ability of science to influence what we can know Nor do these limitations diminish the ability of science to inspire wonder Quite the opposite For Powers the true wonder of the human intellect rests in our remarkable ability to balance observation and interpretation What he discovers again and again in his fiction is that science like literature is a product of the human imagination a way to mediate between the world and our perceptions of it The recognition that science is a cultural practice a body of knowledge thoroughly imbued with the practices and prejudices of its historical surroundings is a necessary first step in mending the rift separating science and literature head and heart The greatest insight of twentieth century science may just be the recognition that there are other ways to access the truth Richard Powers skillful weaving of science and art is a testament that literature offers a unique vantage point from which we might learn something of value about ourselves and
