Janice K. Ledford

Slit Lamp Primer:

The Slit Lamp Primer Janice K. Ledford, Valerie N. Sanders, 2006 The Slit Lamp Primer is the complete book on the slit lamp for the ophthalmic and optometric office. Now updated into a second edition, this user-friendly introduction to the slit lamp microscope highlights the instrument's basic parts as well as examination and illumination techniques. Janice Ledford and Valerie Sanders explain more than just the fundamentals of the slit lamp. Written in a conversational style with supplemental photographs and diagrams, The Slit Lamp Primer delves into issues concerning the normal postoperative and problematic eye. Features of the patient history including medications are examined in light of the possible slit lamp findings. Detailed notes for proper documentation are included along with tables to give guidelines for subjective grading of the findings. Updated and key features: The examination of patients on various systemic medications with a list of drugs that may have side effects visible with the slit lamp. The examination of post-operative patients with a new section that focuses on patients who have undergone refractive surgery. Up-to-date study icons, key points listed at the beginning of each chapter, and What the Patient Needs to Know sidebars. Photographs and descriptions of parts and care of the slit lamp. Atlas of photographs of the normal eye. Photographs of pathology. Tables to assist in contact lens evaluation. The Slit Lamp Primer Second Edition is a valuable addition to the reference library of any ophthalmic and optometric paraprofessional or student. Explore the workings of a useful and effective instrument with the most practical and user-friendly book on the subject available today.

The Slit Lamp Marcus-Matthias Gellrich, 2013-11-19 In this book, the author describes in detail the history, construction, and examination potential of the slit lamp. In particular, however, he presents a new approach, videography, that allows the ophthalmologist to document all eye diseases with the slit lamp and a video camera in a practicable, rapid, and affordable manner. The necessary methods, techniques, and equipment, including converging, diverging, and contact lenses, are clearly explained in the text, and four didactic videos. The 20 most important videographic settings are described, and recipes for their use are presented along with diagnostic tips. The accompanying collection of clinical images represents the world's first ever general atlas of ophthalmology from the perspective of the slit lamp. It is the author's hope that this introduction to ophthalmological videography, with its many images never previously produced with a slit lamp, will stimulate others to exploit the approach's potential.
