Sm Four Trials:

Proceedings of the Fourth Seattle Symposium in Biostatistics: Clinical Trials Thomas R. Fleming, Bruce S. Weir, 2012-12-12 This volume contains a selection of chapters based on papers presented at the Fourth Seattle Symposium in Biostatistics Clinical Trials. The symposium was held in 2010 to celebrate the 40th anniversary of the University of Washington School of Public Health and Community Medicine. It featured keynote lectures by David DeMets and Susan Ellenberg and 16 invited presentations by other prominent researchers. The papers contained in this volume encompass recent methodological advances in several important clinical trials research such as biomarkers, meta-analyses, sequential and adaptive clinical trials, and various genetic/bioinformatic techniques. This volume will be a valuable reference for researchers and practitioners in the field of clinical trials.

Isotopic Constraints on Earth System Processes Kenneth W. W. Sims, Katharine (Kate) Maher, Daniel P. Schrag, 2022-06-01 Using isotopes as a tool for understanding Earth processes. From establishing the absolute age of the Earth to providing a stronger understanding of the nexus between geology and life, the careful measurement and quantitative interpretation of minor variations in the isotopic composition of Earth's materials has provided profound insight into the origins and workings of our planet. *Isotopic Constraints on Earth System Processes* presents examples of the application of numerous different isotope systems to address a wide range of topical problems in Earth system science. Volume highlights include examination of the natural fractionation of non-traditional stable isotopes; utilizing isotopes to understand the origin of magmas and evolution of volcanic systems; application of isotopes to interrogate and understand Earth's Carbon and Oxygen cycles; examination of the geochemical and hydrologic processes that lead to isotopic fractionation; application of isotopic reactive transport models to decipher hydrologic and biogeochemical processes. The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity. Its publications disseminate scientific knowledge and provide resources for researchers, students, and professionals.

Advanced Bimanual Manipulation Bruno Siciliano, 2012-04-12 Dexterous and autonomous manipulation is a key technology for the personal and service robots of the future. *Advances in Bimanual Manipulation*, edited by Bruno Siciliano, provides the robotics community with the most noticeable results of the four-year European project DEXMART. DEXterous and autonomous dual arm/hand robotic manipulation with sMART sensory/motor skills: A bridge from natural to artificial cognition. The volume covers a host of highly important topics in the field concerned with modelling and learning of human manipulation skills, algorithms for task planning, human-robot interaction and grasping, as well as hardware design of dexterous anthropomorphic hands. The results described in this five-chapter collection are believed to pave the way

towards the development of robotic systems endowed with dexterous and human aware dual arm hand manipulation skills for objects operating with a high degree of autonomy in unstructured real world environments

Remembering Fergus Craik, 2021-06-10 Memory is typically thought of as a set of neural representations memory traces that must be found and reactivated in order to be experienced It is often suggested that memory traces are represented by a hierarchically organized system of analyzers modified sharpened and differentiated by encounters with successive events Remembering An activity of mind and brain is the magnum opus of one of the leading figures in the psychology of memory It sets out Fergus Craik's current view of human memory as a dynamic activity of mind and brain The author argues that remembering should be understood as a system of active cognitive processes similar to perhaps identical to the processes underlying attending perceiving and thinking Thus encoding processes are essentially viewed as the mental activities involved in perceiving and understanding and retrieval is described as the partial reactivation of these same processes This account proposes that episodic and semantic memory should be thought of as levels in a continuum of specificity rather than as separate systems of memory In addition the book presents Craik's views on working memory and on age related memory impairments In the latter case the losses are attributed largely to a difficulty with the self initiation of appropriate encoding and retrieval operations compensated when needed by support from the external environment The development of these ideas is discussed throughout the book and illustrated substantially by experiments from the author's lab but also by empirical and theoretical contributions from other researchers A broad account of current ideas and findings in contemporary memory research but viewed from the author's personal theoretical standpoint Remembering An activity of mind and brain will be essential for researchers graduate and postdoctoral students working in the field of human memory
