Small World Uncovering Natures Hidden Networks:

Small World Mark Buchanan, 2002 Most of us have had the experience of running into a friend of a friend far away from home and feeling that the world is somehow smaller than it should be We usually write off such unlikely encounters as coincidence even though it seems to happen with uncanny frequency According to a handful of physicists at Los Alamos and other cutting edge research labs around the world it turns out that this small world phenomenon is no coincidence at all Rather it is a manifestation of a hidden and powerful design that binds the world together In this title Mark Buchanan tells the story of how a stunning discovery in complexity science is revolutionizing the way we understand networks The Internet the brain power grids and the global economy are all networks that seem to have evolved a small world geometry with properties independent of the nature of the things themselves The author argues that this underlying pattern may be one of nature s greatest design tricks and the book shows us how scientists are putting this new insight to work , Network Analysis Literacy Katharina A. Zweig, 2016-10-26 This book presents a perspective of network analysis as a tool to find and quantify significant structures in the interaction patterns between different types of entities Moreover network analysis provides the basic means to relate these structures to properties of the entities It has proven itself to be useful for the analysis of biological and social networks but also for networks describing complex systems in economy psychology geography and various other fields Today network analysis packages in the open source platform R and other open source software projects enable scientists from all fields to quickly apply network analytic methods to their data sets Altogether these applications offer such a wealth of network analytic methods that it can be overwhelming for someone just entering this field This book provides a road map through this jungle of network analytic methods offers advice on how to pick the best method for a given network analytic project and how to avoid common pitfalls It introduces the methods which are most often used to analyze complex networks e g different global network measures types of random graph models centrality indices and networks motifs In addition to introducing these methods the central focus is on network analysis literacy the competence to decide when to use which of these methods for which type of question Furthermore the book intends to increase the reader s competence to read original literature on network analysis by providing a glossary and intensive translation of formal notation and mathematical symbols in everyday speech Different aspects of network analysis literacy understanding formal definitions programming tasks or the analysis of structural measures and their interpretation are deepened in various exercises with provided solutions This text is an excellent if not the best starting point for all scientists who want to harness the power of network analysis for their field of expertise The People, Place, and Space Reader Jen Jack Gieseeking, William Mangold, Cindi Katz, Setha Low, Susan Saegert, 2014-04-16 The People Place and Space Reader brings together the writings of scholars designers and activists from a variety of fields to make sense of the makings and meanings of the world we inhabit They help us to understand the relationships between people and the environment at all scales and to

consider the active roles individuals groups and social structures play in creating the environments in which people live work and play These readings highlight the ways in which space and place are produced through large and small scale social political and economic practices and offer new ways to think about how people engage the environment in multiple and diverse ways Providing an essential resource for students of urban studies geography sociology and many other areas this book brings together important but till now widely dispersed writings across many inter related disciplines Introductions from the editors precede each section introducing the texts demonstrating their significance and outlining the key issues surrounding the topic A companion website PeoplePlaceSpace org extends the work even further by providing an on going series of additional reading lists that cover issues ranging from food security to foreclosure psychiatric spaces to the environments of predator animals
