The Badgers of Wytham Woods David Macdonald, Chris Newman, 2022-10-17 The badgers of Wytham Woods, Oxford, UK, have been studied continuously and intensively by David Macdonald for almost 50 years. 25 of them, with his former student and co-author Chris Newman, generating a wealth of data pertaining to every facet of their ecology and evolution. Through a mix of accessible, highly readable prose and cutting-edge science, the authors weave a riveting scientific story of the lives of these intriguing creatures, highlighting the insights offered to science more broadly through badgers as a model system. They provide a paradigm from population down to molecule for a deeper understanding of mammalian behaviour, ecology, epidemiology, evolutionary biology, and conservation. The real value of this long-term study is particularly apparent with current and globally relevant challenges such as climate change, disease epidemics, and senescence. This unique dataset enables us to examine these issues in a context that only a half-century experiment can reveal. *The Badgers of Wytham Woods* will appeal to a broad audience of professional academics, especially carnivore and mammalian biologists, researchers, and students at all levels, governmental and non-governmental wildlife bodies, and to the natural historian fascinated by wild animals and the remarkable processes of nature they exemplify.
