Skepsis, Dogma, and Belief Edmond A. Murphy, 1981 This book reflects upon the manner in which medical research is performed and interpreted

The Logical Structure of Clinical Medicine Ulrich Müller-Kolck, 2015-11-17 The practice of medicine basically depends on three general concepts an individual patient image the individual disease course of this patient and an expectation of the future development of the disease Physicians use heuristics for the cognitive processing of these concepts Basic clinical heuristics are put into three algorithms a history based learning algorithm a diagnostic inferencing algorithm and a prognostic planning algorithm A proto theory of clinical reasoning for practicing physicians is proposed

The Role of Complementary and Alternative Medicine Daniel Callahan, 2002 At the center of the debate over complementary and alternative medicine from acupuncture and chiropractic treatments to homeopathy and nutritional supplements is how to scientifically measure the effectiveness of a particular treatment Fourteen scholars from the fields of medicine philosophy sociology and cultural and folklore studies examine that debate and the clash between growing public support and the often hostile stance of clinicians and medical researchers Proponents and critics have different methodologies and standards of evidence raising the question of how much pluralism is acceptable in a medical context particularly in light of differing worldviews and the struggle to define medicine in the modern world The contributors address both the methodological problems of assessment and the conflicting cultural perspectives at work in a patient's choice of treatment Sympathetic to CAM the contributors nonetheless offer careful critiques of its claims and suggest a variety of ways it can be taken seriously yet subject to careful scrutiny

[Phenotypic Variation in Populations](#) Avril Woodhead, 2012-12-06 The human race has enormous heterogeneity founded on genetic and environmental sources Variability therefore is a vital dimension in any consideration of human risk assessment In the estimation of risks current methods of extrapolation based upon converting the response of a median man are inadequate as they ignore phenotypic variation and therefore susceptible subgroups There is a growing literature defining the extent of human variation in normal populations thus the normal young adult population may have 10-20% known hyperreactors How far can we ignore human variability in risk assessment Should we be concerned with susceptible groups and how can we modify the risk assessment analysis accordingly The aim of our meeting was to bring together experts from the fields of human epidemiology toxicology aging genetics carcinogenesis and teratology and to

provide a forum in which we might assimilate knowledge of human heterogeneity as a coherent whole. Since the resolution and obligations of risk assessment in the last analysis are a political process we also involved representatives from the legal field, the unions and the regulatory agencies. Murphy, James J. Butzow, Edward L. Suarez-Murias, 1997. Thus far in the development of the discipline of medical ethics the overriding concern has been with solutions to specific problems. General discussion is hampered by lack of understanding both of the scope and methodology of medical ethics and of its scientific and philosophical basis. In Underpinnings of Medical Ethics Edmond A. Murphy, James J. Butzow and Edward L. Suarez-Murias offer much needed clarification of the purview, ontological basis and methodology of a medical ethics that is to be comprehensive and yet readily accepted by all. Biostatistics in Medicine Edmond A. Murphy, 1982. Abstract: A statistical textbook for experimentalists in the medical professions presents an overview of statistical methods coupled with numerous examples, applications, comments on appropriateness and an identification of the underlying assumptions. The material covers the topics of elementary statistical theory, hypothesis testing, estimations, normal distribution, statistics, variance, regression, correlation, probabilities, categorical data, binomial, multinomial, Poisson distributions and statistical methods for non-explicit distributions. The material presupposes an elementary knowledge of probability but does not require a knowledge of calculus. A Companion to Medical Statistics Edmond A. Murphy, 1985. This book is an attempt to see how far words and ideas rather than algebra and calculation help us to understand statistical evidence and how to interpret it. It also treats the relationship between clinical and biochemical problems. Trying to Give Ease J. K. Crellin, Jane Philpott, 1997. In Trying to Give Ease John K. Crellin and Jane Philpott focus on the life practices and accumulated knowledge of the late A. L. Tommie Bass, a widely known and admired Appalachian herbalist. Informed by insights drawn from several disciplines, particularly anthropology, their broad historical analyses of self-care practices and herbal remedies draw heavily on recorded interviews with Bass and his patients. Special attention is given to local resources that shape alternative medicine, the backgrounds of herbal practitioners and the cultural currency of medical concepts once central to professional medicine and now less common. The authors report on both the physical effects of herbal remedies and the psychological factors that have an impact on their success. Trying to Give Ease is a companion to A Reference Guide.
