Sky Atlas :

The Sky Atlas Edward Brooke-Hitching, 2019-10-17 After the enormous international success of *The Phantom Atlas* and *The Golden Atlas* Edward Brooke Hitching's stunning new book unveils some of the most beautiful maps and charts ever created during mankind's quest to map the skies above us. This richly illustrated treasury showcases the finest examples of celestial cartography, a glorious genre of map making often overlooked by modern map books as well as medieval manuscripts, masterpiece paintings, ancient star catalogues, antique instruments and other appealing curiosities. This is the sky as it has never been presented before: the realm of stars and planets but also of gods, devils, weather wizards, flying sailors, medieval aliens, mythological animals and rampaging spirits. The reader is taken on a tour of star-obsessed cultures around the world, learning about Tibetan sky burials, star-covered Inuit dancing coats, Mongolian astral prophets and Sir William Herschel's 1781 discovery of Uranus, the first planet to be found since antiquity. Even stranger are the forgotten stories from European history like the English belief of the Middle Ages in ships that sailed a sea above the clouds, 16th century German UFO sightings and the Edwardian aristocrat who mistakenly mapped alien-made canals on the surface of Mars. As the intricacies of our universe are today being revealed with unprecedented clarity, there has never been a better time for a highly readable book as beautiful as the night sky to contextualise the scale of these achievements for the general reader.

Night Sky Atlas Robin Scagell, 2017-02-07 Maps and text show stars, planets and other objects in the sky, night all visible with binoculars or a small telescope. Photo-realistic images opposite maps show how the same portion of sky looks to the naked eye, allowing less experienced observers to quickly find specific sky objects of interest. The maps can be used for planning observations, navigating from one part of the sky to another and for quick reference. The guide can be used anywhere in the world and at any time of the year. The maps include observing targets, seasonal maps and magnitude 5.5 star maps. Additional features are a plastic laminated lay-flat binding for outdoor use, flaps to use as page markers, constellation maps, relief Moon maps and a quick access page-referenced constellation listing on the back flap. The main section describes each star cluster, nebula and galaxy with cross-references to chart numbers, while a chart-by-chart listing provides coordinates, object types, constellations and apparent magnitudes.
