This atlas is intended primarily for anybody who is in some background for the arrangement of how the interested in basic geology of Africa. Its originality lies in that the atlas was done. The second chapter is devoted to the fact that the regional geology of each African country or territory is reviewed country wise by maps for a fuller appreciation of why this work in Africa is and text a view normally not presented in textbooks worth doing. Chapter 3 provides an executive summary of regional geology. It is my belief that there has long been a need in universities and geological surveys whole in the context of no political boundaries both in Africa and in the developed world for summary. The main part of the atlas lies in Chapter 4 where in summarizing geological maps and an accompanying basic alphabetical order each African country or territory text utilising the enormous fund of knowledge that is presented by a digitized geological overview map has been accumulated since the beginning of geological and an accompanying text on its respective stratigraphical research in Africa in the mid 19th century. I hope that the present atlas may satisfy this need. A short list of relevant references is also added.
