Toxic Safety Alissa Corder,2016-03-29 Initially marketed as a life saving advancement flame retardants are now mired in controversy Some argue that data show the chemicals are unsafe while others continue to support their use The tactics of each side have far reaching consequences for how we interpret new scientific discoveries An experienced environmental sociologist Alissa Corder conducts more than a hundred interviews with activists scientists regulators and industry professionals to isolate the

social scientific economic and political forces influencing environmental health policy today Introducing strategic science translation she describes how stakeholders use scientific evidence to support nonscientific goals and construct conceptual risk formulas to shape risk assessment and the interpretation of empirical evidence A revelatory text for public health advocates Toxic Safety demonstrates that while all parties interested in health issues use science to support their claims they do not compete on a level playing field and even good intentions can have deleterious effects
