Linking Architecture and Education Anne Taylor, 2009-05-16 For the past forty years Anne Taylor has studied how schools classrooms playgrounds homes museums and parks affect children and how they learn As a result she has developed a holistic sustainable philosophy of learning environment design She argues persuasively that architects must integrate their design knowledge with an understanding of the developmental needs of learners while at the same time educators parents and students must broaden their awareness of the built natural and cultural environment to maximize the learning experience In other words schools and other environments can themselves become three dimensional textbooks When architects are cognizant of newer models of education and educators view the environment as more than a box in which to teach prescribed lessons the result is an informed architecture that enables children to discover the power of their own learning The book presents numerous examples of dynamic designs that are the result of interdisciplinary understanding of place Taylor includes designer perspectives forums derived from commentary by outside contributors involved in school planning and a wealth of photographs of thoughtful and effective solutions to create learning environments from comprehensive design criteria Because the concept of school is enlarged to a community campus the book also spawns a new model of teaching and learning This book is essential reading for educators architects and community members who are anxious to transform education in America and elsewhere Anne Taylor is the most outstanding educator leading proponent and practitioner in the three dimensional textbook field Her work is the finest resource available for connecting students young and old to their learning environments and visa versa Edward E Kirkbride NCARB REFP Before Western man divided the universe into discrete subject matter areas the order in the universe was and still is both interdisciplinary and holistic The branching of trees spiraling of shells meandering of streams and the radial designs of flowers for example represent an analogy of mathematics biology and art The current artificial separation of subject matter is in contrast to the way the world is constructed and the way children perceive it Architecture and the study of the built natural and cultural environment synthesize the world of material things and the world of ideas Further more it helps us to realize that we are a part of not apart from the environment This book is a tool and a gift to designers educators and students everywhere to assist them in seeing the meaning behind all that we view and use for living on earth To know our precious relationship to our surroundings is the intent of this book In this way life is a work of art and each of us is an artist Anne Taylor

The Great American Jobs Scam Greg LeRoy, 2005-07-21

For the past 20 years corporations have been receiving huge tax breaks and subsidies in the name of jobs jobs jobs. But as Greg LeRoy demonstrates in this important new book it's become a costly scam. Playing states and communities off against each other in a bidding war for jobs, corporations reduce their taxes to next to nothing and win subsidy packages that routinely exceed 100 000 per job. But the subsidies come with few strings attached. So companies feel free to provide fewer jobs or none at all or even outsource and lay people off. They are also free to pay poverty wages without health care or other benefits. All too often communities lose twice. They lose jobs or gain jobs so low paying they do nothing to help the community and lose revenue due to the huge corporate tax breaks. That means fewer resources for maintaining schools, public services and infrastructure. In the end the local governments that were hoping for economic revitalization are actually worse off. They're forced to raise taxes on struggling small businesses and working families or reduce services or both. Greg LeRoy uses up to the minute examples naming names including Wal Mart, Raytheon, Fidelity Bank of America, Dell and Boeing to reveal how the process works. He shows how carefully corporations orchestrate the bidding wars between states and communities. He exposes shadowy site location consultants who play both sides against the middle and he dissects government and corporate mumbo jumbo with plain talk. The book concludes by offering common sense reforms that will give taxpayers powerful new tools to deter future abuses and redirect taxpayer investments in ways that will really pay off.
