A Cultural History of the Sea in the Early Modern Age Steve Mentz,2023-02-09 For the first time during the Early Modern period ships regularly traveled between and among all of basins that comprise the World Ocean During this period European mariners ventured into new waters where they encountered new trading partners new environments and new opportunities In the Caribbean and Atlantic coast of the Americas European mariners sought everything from pearls to gold to codfish and in pursuing these resources they fractured Indigenous communities Entering into the ancient monsoon routes of the Indian Ocean brought European ships in touch with the powerful states and maritime cultures of East Africa and Asia Converging on the vast Pacific basin both from the Americas and from Asia brought these mariners into contact with ancient cultures dangerous passages and newly global trade routes During this period of globalization and cultural encounters the ocean provided a means of transportation a site of environmental hostility and a poetic metaphor for both connection and alienation In material and cultural ways the global sea routes traveled during this period laid down structures of global exchange and conflict that the world still follows today

Sound Propagation through the Stochastic Ocean John A. Colosi,2016-06-20 The ocean is opaque to electromagnetic radiation and transparent to low frequency sound so acoustical methodologies are an important tool for sensing the undersea world Stochastic sound speed fluctuations in the ocean such as those caused by internal waves result in a progressive randomisation of acoustic signals as they traverse the ocean environment This signal randomisation imposes a limit to the effectiveness of ocean acoustic remote sensing navigation and communication Sound Propagation through the Stochastic Ocean provides a comprehensive treatment of developments in the field of statistical ocean acoustics over the last 35 years This will be of fundamental interest to oceanographers marine biologists geophysicists engineers applied mathematicians and physicists Key discoveries in topics such as internal waves ray chaos Feynman path integrals and mode transport theory are addressed with illustrations from ocean observations The topics are presented at an approachable level for advanced students and seasoned researchers alike

The Order of Sounds Francois J. Bonnet,2019-01-15 This study of the subtlety complexity and variety of modes of hearing maps out a sonorous archipelago a heterogeneous set of shifting sonic territories shaped by the vicissitudes of desire and discourse Profoundly intimate yet immediately giving onto distant spaces both an organ of fear and an echo chamber of anticipated pleasures an uncontrollable flow subject to unconscious selection and augmentation the subtlety complexity and variety of modes of hearing has meant that sound has rarely received the same philosophical attention as the visual In *The Order of Sounds* Francois J Bonnet makes a compelling case for the irreducible

heterogeneity of sound navigating between the physical models constructed by psychophysics and refined through recording technologies and the synthetic production of what is heard From primitive vigilance and sonic mythologies to digital sampling and sound installations he examines the ways in which we make sound speak to us in an analysis of listening as a plurivocal phenomenon drawing on Foucault Deleuze and Guattari Barthes Nancy Adorno and de Certeau and experimental pioneers such as Tesla Bell and Raudive Stringent critiques of the soundscape and reduced listening demonstrate that univocal ontologies of sound are always partial and politicized for listening is always a selective fetishism a hallucination of sound filtered by desire and convention territorialized by discourse and its authorities Bonnet proposes neither a disciplined listening that targets sound itself nor an ocean of sound in which we might lose ourselves but instead maps out a sonorous archipelago a heterogeneous set of shifting sonic territories shaped and aggregated by the vicissitudes of desire and discourse **Science and the Sea** ,1967 Attenuation of Low Frequency Sound in the Sea ,1980
