Conservation Helen Kopnina,Haydn Washington,2019-08-05 This book provides keys to decrypt current political debates on the environment in light of the theories that support them and provides tools to better understand and manage environmental conflicts and promote environmentally friendly behaviour As we work towards global sustainability at a time when efforts to conserve biodiversity and combat climate change correspond with land grabs by large corporations food insecurity and human displacement While we seek to reconcile more than human relations and responsibilities in the Anthropocene we also struggle to accommodate social justice and the increasingly global desire for economic development These and other challenges fundamentally alter the way social scientists relate to communities and the environment This

book takes as its point of departure today's pressing environmental challenges particularly the loss of biodiversity and the role of communities in protected areas conservation In its chapters the authors discuss areas of tension between local livelihoods and international conservation efforts between local communities and wildlife and finally between traditional ways of living and modernity The central premise of this book is while these tensions cannot be easily resolved they can be better understood by considering both social and ecological effects in equal measure While environmental problems cannot be seen as purely ecological because they always involve people who bring to the environmental table their different assumptions about nature and culture so are social problems connected to environmental constraints While nonhumans cannot verbally bring anything to this negotiating table aside from vast material benefits that society relies on the distinct perspective of this book is that there is a need to consider the role of nonhumans as equally important stakeholders albeit without a voice This book develops an argument that human environmental relationships are set within ecological reality and ecological ethics and rather than being mutually constitutive processes humans have obligate dependence on nature not vice versa This would enable an ethical position encompassing the needs of other species and giving simultaneous without one being subordinated to another consideration to justice for humans and non humans alike The book is accessible to both social scientists and conservation specialists and intends to contribute to strengthening interdisciplinary collaborations in the field of conservation

The Rise of Business Ethics Bernard Mees, 2019-11-28 In 1973 Daniel Bell argued that corporations in post industrial societies increasingly needed to behave in accord with widely accepted social norms particularly in terms of ethical behavior and social responsibility Yet widespread criticism of business behavior was not an invention of the 1960s and 70s or a product of changing commercial norms The key feature historically has been business scandal Understandings of how the field of business ethics has emerged are undeveloped however This book is the first attempt to explain the conditions which saw a focus develop on business ethics especially in the 1960s and 70s and how the broader field developed to encompass related notions such as corporate governance corporate social responsibility ethical leadership sustainable business and responsible management education The Rise of Business Ethics provides an introduction and analysis of the key developments in contemporary business ethics by examining them in terms of their diachronic development the key thinkers the key issues the key institutions and how they each contributed to contemporary understandings of business ethics governance and practice Addressing the topic from a European as well as North American perspective The Rise of Business Ethics will be of interest to researchers academics and students in the fields of business ethics business and society business history organization studies and political economy

Conservation Politics David Johns, 2019-04-18 Challenges conservationists to rethink protecting the natural world making political strategies central to increase support and influence

Ritual and Religion in the Making of Humanity Roy A. Rappaport, 1999-03-25 Roy Rappaport argues that religion is central to the continuing evolution of life although it has been displaced from its original position of intellectual authority by the rise of modern science His book which could be construed as in some degree religious as well as about religion insists that religion can and must be reconciled with science Combining adaptive and cognitive approaches to the study of humankind he mounts a comprehensive analysis of religion s evolutionary significance seeing it as co extensive with the invention of language and hence of culture as we know it At the same time he assembles the fullest study yet of religion s main component ritual which constructs the conceptions which we take to be religious and has been central in the making of humanity s adaptation The text amounts to a manual for effective ritual illustrated by examples drawn from anthropology history philosophy comparative religion and elsewhere

Ethical Principles and Economic Transformation - A Buddhist Approach Laszlo Zsolnai, 2011-05-17 Buddhism points out that emphasizing individuality and promoting the greatest fulfillment of the desires of the individual conjointly lead to destruction The book promotes the basic value choices of Buddhism namely happiness peace and permanence Happiness research convincingly shows that not material wealth but the richness of personal relationships determines happiness Not things but people make people happy Western economics tries to provide people with happiness by supplying enormous quantities of things and today s dominating business models are based on and cultivates narrow self centeredness But what people need are caring relationships and generosity Buddhist economics makes these values accessible by direct provision Peace can be achieved in nonviolent ways Wanting less can substantially contribute to this endeavor and make it happen more easily Permanence or ecological sustainability requires a drastic cutback in the present level of consumption and production globally This reduction should not be an inconvenient exercise of self sacrifice In the noble ethos of reducing suffering it can be a positive development path for humanity
