

THE EVOLUTION AND CHEMISTRY OF AGGRESSION

D. D. THIESSEN, Ph.D.

University of Texas
Austin, Texas

This authoritative volume brings together current theorizing and research on the evolutionary and chemical aspects of aggression. While it is possible to investigate one facet independently of the other, the two, evolution and chemistry, are intimately intertwined and are best studied together. Since aggression is viewed as the most direct form of competition, it is discussed within the framework of evolution. Wherever possible natural selection processes are stressed.

While the emphasis is on vertebrate and especially mammalian aggression, this book also suggests the genesis of aggression among invertebrates and even among competing single cells. A second area of emphasis is on understanding the biochemical processes underlying aggression. Rapid studies are being made in this area, especially with the advent of psychopharmacology and the continued advances in neuroendocrinology. Chemicals in the form of environmental signals (pheromones) also have direct effects on aggression, and are discussed anew.

Divided into five chapters, this text:

- explores the phylogenetic history of aggression and emphasizes its adaptive significance

- outlines several genetic correlates of aggression, suggests how competition shapes the social and reproductive organization of populations, and gives data to suggest that human aggression is partially determined by genetic factors and mediated through biochemical and morphological attributes
- examines the hormonal control of aggression
- reviews the significance of chemosignals in directing aggression and reproductive competence
- discusses the brain biochemistry of aggression and how pharmacological substances affect aggression

A major point woven throughout the chapters is that aggression is a form of competition—for mates, food, territories and other resources—but it is not the only form. Success in living and reproducing nearly always involves competition, but it need not involve fighting. In fact, the advantages which can sometimes be acquired by fighting can often be obtained through other means.
