## **The Evolution Of Culture An Interdisciplinary View:**

**Evolution of Culture** Robin Dunbar, 2019-07-29 This book explores the ways in which contemporary evolutionary thinking might inform the study of the peculiarly human phenomenon of symbolic culture including language ritual religion religion and art It draws together contributions from biologists linguists anthropologists and archaeologists in order to establish common ground where collaboration and interaction will be especially productive and challenging in the study of those fundamental aspects of our biology that makes us human Multidisciplinary An evolutionary approach to culture

**Handbook of Social Psychology** John DeLamater, 2006-11-24 Psychology focusing on processes that occur inside the individual and Sociology focusing on social collectives and social institutions come together in Social Psychology to explore the interface between the two fields The core concerns of social psychology include the impact of one individual on another the impact of a group on its individual members the impact of individuals on the groups in which they participate the impact of one group on another This book is a successor to Social Psychology Social Perspectives and Sociological Perspectives in Social Psychology The current text expands on previous handbooks in social psychology by including recent developments in theory and research and comprehensive coverage of significant theoretical perspectives

**The Construction of the Supernatural in Euro-American Cultures** Benson Saler, 2021-12-02 This book describes aspects of the concept of the supernatural from the intellectual history of Euro American cultures These samplings shed light on issues in the study of religions and religion rather than attempting to provide either a lineally coherent or exhaustive account of a somewhat fraught and complicated notion Observations include uses of the term among the ancient Greeks and medieval Christian theologians and 19th and 20th century social scientists This book highlights more recent academics who draw on the cognitive and evolutionary sciences in attempting to make sense of recurrent features of the representations and meta representations of different cultures This includes such counter intuitive notions as the mysterious among the Wayuu of Columbia and Venezuela and vampires in Europe and North America These observations are concluded in a final essay Toward a Realistic and Relevant Science of Religion which presents considered opinions on how we might draw on the cognitive and evolutionary sciences to establish the foundations for a genuinely scientific study of religions and religion Benson Saler sadly passed away shortly after writing this book An appreciation of his work written by Armin W Geertz is included in this volume

Sensing the Divine Michael N. Marsh, 2021-08-10 This book proposes another unique basis for the origins of religion from disturbances in brain function It proposes the novel idea that near death and out of body experiences ND OBE engendered a sense of the divine in ancient man As the author points out key aspects of ND OBE are thematic of all later established religions These include journeys to heaven sightings of brightly lit godlike figures and dead people now alive Thus ND OBE could be the originating source of these spiritual motifs To this the author adds a fourth factor various brain influences contribute to or modulate ND OBE Such cognate neurological disorders include REM sleep intrusions sleep

paralysis narcolepsy and the Guillain Barr syndrome Errors due to aberrant switching between key neural control centers disrupt critical state boundaries between consciousness and dreaming This may induce NDE Thus in this state subjects temporarily fail to understand where they are undergo loss of self and detached from the world They imagine a union with Gods Here then is the biological basis of ineffability Ancient humans gained beliefs about the supernatural through day to day existence This book argues that near death experiences and cognate neurological conditions some genetically determined could have facilitated even augmented such beliefs Hence in configuring another realm of spiritual experience beyond the known environment these neurological possibilities offer effective traction

Early Years Education: Policy and practice in early education and care Rod Parker-Rees,Jenny Willan,2006 This collection of papers provides a useful resource for scholars who need to ground their own study in a wider historical and global discourses concerning the education of children under eight

**New Perspectives on the Origins of Language** Claire Lefebvre,Bernard Comrie,Henri Cohen,2013-11-15 The question of how language emerged is one of the most fascinating and difficult problems in science In recent years a strong resurgence of interest in the emergence of language from an evolutionary perspective has been helped by the convergence of approaches methods and ideas from several disciplines The selection of contributions in this volume highlight scenarios of language origin and the prerequisites for a faculty of language based on biological historical social cultural and paleontological forays into the conditions that brought forth and favored language emergence augmented by insights from sister disciplines The chapters all reflect new speculation discoveries and more refined research methods leading to a more focused understanding of the range of possibilities and how we might choose among them There is much that we do not yet know but the outlines of the path ahead are ever clearer

**The Oxford Handbook of the Sociology of Religion** Peter Clarke,2011-02-04 The Oxford Handbook of the Sociology of Religion draws on the expertise of an international team of scholars providing both an entry point into the sociological study and understanding of religion and an in depth survey into its changing forms and content in the contemporary world The role and impact of religion and spirituality on the politics culture education and health in the modern world is rigorously discussed and debated The study of the sociology of religion forges interdisciplinary links to explore aspects of continuity and change in the contemporary interface between society and religion Using a combination of theoretical methodological and content led approaches the fifty seven contributors collectively emphasise the complex relationships between religion and aspects of life from scientific research to law ecology to art music to cognitive science crime to institutional health care and more The developing character of religion irreligion and atheism and the impact of religious diversity on social cohesion are explored An overview of current scholarship in the field is provided in each themed chapter with an emphasis on encouraging new thinking and reflection on familiar and emergent themes to stimulate further debate and scholarship The resulting essay collection provides an invaluable resource for research and teaching in this diverse discipline

**Human Characteristics** Preben

Bertelsen, Henrik Høgh-Olesen, Jan Tønnesvang, 2009-01-23 Every once in a while we have to reconsider the perennial questions concerning human nature What are the special human behaviours social practices and psychological structures that make us particularly human The field of evolution psychology and cognitive science is the most expanding interdisciplinary area of this field for the time being uniting different sciences under the same evolutionary paradigm and keeping them occupied by the same eternal questions stated above Relevant data and theoretical considerations are piling up but an overview is needed To facilitate this a large interdisciplinary conference entitled Human Mind Human Kind was held at Aarhus University Denmark The studies fall into three well defined sections 1 Evolution and Cognition Comparative and Developmental Perspectives 2 Human Sociality Morality and Religiosity 3 Human Sexuality and Mating Strategies Specifying the differences between our own species and the rest of the animal world always provokes debate But these demarcations simply have to be drawn once and again They focus attention and stimulate research exactly because they provoke and challenge other researchers to take up the glove and prove us wrong      *Social Brain, Distributed Mind* Robin Dunbar, Clive Gamble, John Gowlett, 2010-04-29 This volume explores how hominin brains became recognisably human minds comparing perspectives from the humanities social and biological sciences New ideas associated with the social brain hypothesis and the concept of the distributed mind allow us to envisage what might have happened in this crucial phase leading up to modern humans      **Relationship Thinking** N. J. Enfield, 2013-12 In Relationship Thinking N J Enfield outlines a framework for analyzing social interaction and its linguistic cultural and cognitive underpinnings by focusing on human relationships This is a naturalistic approach to human sociality grounded in the systematic study of real time data from social interaction in everyday life Many of the illustrative examples and analyses in the book are a result of the author's long term field work in Laos Enfield promotes an interdisciplinary approach to studying language culture and mind building on simple but powerful semiotic principles and concentrating on three points of conceptual focus The first is human agency the combination of flexibility and accountability which defines our possibilities for social action and relationships and which makes the fission and fusion of social units possible The second is enchrony the timescale of conversation in which our social relationships are primarily enacted The third is human sociality a range of human propensities for social interaction and enduring social relations grounded in collective commitment to shared norms Enfield's approach cuts through common dichotomies such as cognitive versus behaviorist or public versus private arguing instead that these are indispensable sides of single phenomena The result is a set of conceptual tools for analyzing real time social interaction and linking it with enduring relationships and their social contexts The book shows that even or perhaps especially the most mundane social interactions yield rich insights into language culture and mind      *An Introduction to Cultural Ecology* Mark Q. Sutton, E. N. Anderson, 2020-08-26 This contemporary introduction to the principles and research base of cultural ecology is the ideal textbook for advanced undergraduate and beginning graduate courses that deal with the intersection of humans and the environment in traditional

societies After introducing the basic principles of cultural anthropology environmental studies and human biological adaptations to the environment the book provides a thorough discussion of the history of and theoretical basis behind cultural ecology The bulk of the book outlines the broad economic strategies used by traditional cultures hunting gathering horticulture pastoralism and agriculture Fully explicated with cases illustrations and charts on topics as diverse as salmon ceremonies among Northwest Indians contemporary Maya agriculture and the sacred groves in southern China this book gives a global view of these strategies An important emphasis in this text is on the nature of contemporary ecological issues how peoples worldwide adapt to them and what the Western world can learn from their experiences A perfect text for courses in anthropology environmental studies and sociology      *Social Anthropology and Human Origins* Alan

Barnard,2011-03-17 The study of human origins is one of the most fascinating branches of anthropology Yet it has rarely been considered by social or cultural anthropologists who represent the largest subfield of the discipline In this powerful study Alan Barnard aims to bridge this gap Barnard argues that social anthropological theory has much to contribute to our understanding of human evolution including changes in technology subsistence and exchange family and kinship as well as to the study of language art ritual and belief This book places social anthropology in the context of a widely conceived constellation of anthropological sciences It incorporates recent findings in many fields including primate studies archaeology linguistics and human genetics In clear accessible style Barnard addresses the fundamental questions surrounding the evolution of human society and the prehistory of culture suggesting a new direction for social anthropology that will open up debate across the discipline as a whole      Jungian Perspectives on Indeterminate States Elizabeth Brodersen,Pilar

Amezaga,2020-08-09 In *Jungian Perspectives on Indeterminate States* Betwixt and Between Borders Elizabeth Brodersen and Pilar Amezaga bring together leading international contributors to analyse and interpret the psychological impact of contemporary border crossing both literally and figuratively Each chapter assesses key themes such as migration culture gender and identity formation through a Jungian lens All the contributors sensitively explore how creative forms can help mitigate the trauma experienced when one is forced to leave safety and enter unknown territory and examines the specific role of indeterminacy liminality and symbols as transformers at the border between culture race and gender The book asks whether we are able to hold these indeterminate states as creative liminal manifestations pointing to new forms integrate the shadow other as potential and allow sufficient cross border migration and fertilization as permissible It makes clear that societal conflict represents a struggle for recognition and identity and elucidates the negative experiences of authoritarian structures attached to disrespect and misrecognitions This interdisciplinary collection will offer key insight for Jungian analysts in practice and in training psychotherapists anthropologists political and cultural theorists and postgraduate researchers in psychosocial studies It will also be of great interest to readers interested in migration sexuality gender race and ethnicity studies      Holistic Anthropology David Parkin,Stanley Ulijaszek,2011 Given the broad reach of anthropology

as the science of humankind there are times when the subject fragments into specialisms and times when there is rapprochement Rather than just seeing them as reactions to each other it is perhaps better to say that both tendencies co exist and that it is very much a matter of perspective as to which is dominant at any moment The perspective adopted by the contributors to this volume is that some anthropologists have over the last decade or so been paying considerable attention to developments in the study of social and biological evolution and of material culture and that this has brought social material cultural and biological anthropologists closer to each other and closer to allied disciplines such as archaeology and psychology A more eclectic anthropology once characteristic of an earlier age is thus re emerging The new holism does not result from the merging of sharply distinguished disciplines but from among anthropologists themselves who see social organization as fundamentally a problem of human ecology and from that of material and mental creativity human biology and the co evolution of society and culture It is part of a wider interest beyond anthropology in the origins and rationale of human activities claims and beliefs and draws on inferential or speculative reasoning as well as hard evidence The book argues that while usefully borrowing from other subjects all such reasoning must be grounded in prolonged intensive and linguistically informed fieldwork and comparison

From Equality to Inequality Csilla Dallos, 2011-01-01 The egalitarian society once enjoyed by the Lanoh hunter gatherers of Peninsular Malaysia is quickly changing Throughout a year of ethnographic fieldwork among the Lanoh Csilla Dallos studied and interpreted social change in order to better understand the processes leading to inequality and the concurrent development of social complexity within a community From Equality to Inequality provides rich empirical data on the factors within a community that significantly affect the development of inequality including the effects of sedentism integration leadership competition self aggrandizement marginalization and feuding kinship groups In this case study Dallos argues that in order to understand emerging inequality anthropologists and social scientists need to revisit current conceptions of politics in small scale egalitarian societies Offering a new model of developing social inequality that is congruent with the principles of complexity theory From Equality to Inequality is a sterling example of how anthropological practice can further our general understanding of human behaviour

*World History Encyclopedia* [21 volumes] Alfred J. Andrea Ph.D., 2011-03-23 An unprecedented undertaking by academics reflecting an extraordinary vision of world history this landmark multivolume encyclopedia focuses on specific themes of human development across cultures era by era providing the most in depth expansive presentation available of the development of humanity from a global perspective Well known and widely respected historians worked together to create and guide the project in order to offer the most up to date visions available A monumental undertaking A stunning academic achievement ABC CLIO's World History Encyclopedia is the first comprehensive work to take a large scale thematic look at the human species worldwide Comprised of 21 volumes covering 9 eras an introductory volume and an index it charts the extraordinary journey of humankind revealing crucial connections among civilizations in different regions through the ages Within each era

**Lucy to Language** R. I. M. Dunbar, Clive Gamble, J. A. J. Gowlett, 2014-02 This volume readdresses the past contribution from archaeology towards the study of evolutionary issues and ties evolutionary psychology into the extensive historical data from the past allowing us to escape the confined timeframe of the comparatively recent human mind and explore the question of just what it is that makes us so different

**Human origin sites and the World Heritage Convention in Africa - N° 33** Nuria Sanz, 2012 Uses examples of artistic work in all media in order to show how contemporary artists have adapted their vision in a manipulation of modern materials to satisfy mankind's needs for spiritual satisfaction through art

Darwinism and the Divine Alister E. McGrath, 2013-05-20 Darwinism and the Divine examines the implications of evolutionary thought for natural theology from the time of publication of Darwin's *On the Origin of Species* to current debates on creationism and intelligent design Questions whether Darwin's theory of natural selection really shook our fundamental beliefs or whether they served to transform and illuminate our views on the origins and meaning of life Identifies the forms of natural theology that emerged in 19th century England and how they were affected by Darwinism The most detailed study yet of the intellectual background to William Paley's famous and influential approach to natural theology set out in 1802 Brings together material from a variety of disciplines including the history of ideas historical and systematic theology evolutionary biology anthropology sociology and the cognitive science of religion Considers how Christian belief has adapted to Darwinism and asks whether there is a place for design both in the world of science and the world of theology A thought provoking exploration of 21st century views on evolutionary thought and natural theology written by the world renowned theologian and bestselling author

**Neanderthal Language** Rudolf Botha, 2020-05-21 Did Neanderthals have language and if so what was it like Scientists agree overall that the behaviour and cognition of Neanderthals resemble that of early modern humans in important ways However the existence and nature of Neanderthal language remains a controversial topic The first in depth treatment of this intriguing subject this book comes to the unique conclusion that collective hunting is a better window on Neanderthal language than other behaviours It argues that Neanderthal hunters employed linguistic signs akin to those of modern language but lacked complex grammar Rudolf Botha unpacks and appraises important inferences drawn by researchers working in relevant branches of archaeology and other prehistorical fields and uses a large range of multidisciplinary literature to bolster his arguments An important contribution to this lively field this book will become a landmark book for students and scholars alike in essence illuminating Neanderthals linguistic powers
