The Entropy Law And The Economic Process:

The Entropy Law and the Economic Process Nicholas Georgescu-Roegen, 1971 In the ultimate analysis man struggles for low entropy and economic scarcity is the reflection of the Entropy Law which is the most economic in nature of all natural laws Thermodynamics itself is presented by the author as the physics of economic value and mans economic activity as analogous though not identical to that of the purposive sorting of the famous Maxwellian demon Economic activity is in fact an extension and a complement of mans biological evolution In it man can use exosomatic organs i e organs with which he is not endowed biologically but which have evolved through a process of mutation selection and diffusion similar to that of biological evolution For wherever there is evolution the author argues there is the work of the Entropy Law with its irrevocable qualitative Change This point leads the author to an extensive examination of the limitations of arithmomorphic models in all sciences He argues that no complete description of reality no philosophical argument not even that of the ultrapositivists no creative thought can dispense with dialectical concepts and reasoning which he views somewhat differently from Hegel The tight knit excursus ends with an analysis of some general economic issues from that of the analytical representation of a process to that of social conflict The author argues that because of the very nature of exosomatic evolution the social conflict will last under any regime as long as there is a human society Publisher s description

The entropy law and the economic process Nicholas Georgescu - Roegen, **The entropy law and the economic process** Nicholas Georgescu-Roegen, 1976 **THE ENTROPY LAW AND THE ECONOMIC PROCESS. BY NICHOLAS GEORGESCU-ROEGEN.** Nicholas Georgescu-Roegen, 1974 **The Entropy Law and the Economic Process /Nicholas Georgescu-Roegen** Nicholas Georgescu-Roegen, 1971 *Ideology, Social Theory, and the Environment* William D. Sunderlin, 2003 Does human population growth threaten the environment or does it guarantee we will safeguard it Is economic growth the key ecological problem or is it in fact the solution What will be the leading force to save the planet civil society government or private enterprise This book shows that these polemical debates are governed not so much by access to facts as they are by the political ideology of the expert advancing a particular argument Moreover the thoughts of these experts tend to be based largely in just one of three competing streams of political thought the left the center or the right Drawing on social theory the author explains the philosophical origins of this tendency to rely on just one of three traditions and why this poses a serious obstacle to conceptualizing the cause nature and resolution of environmental problems Sunderlin argues that laying the foundation for a livable world involves giving conscious and dedicated attention to the core tenets of all three political traditions action against class inequality and advocacy of social justice within and among countries reformation of laws and policies emanating from the halls of power and technological innovation in centers of research and wholesale cultural change and promotion of individual initiative responsibility and creativity **Valuing the Earth, second edition** Herman E. Daly, Kenneth N. Townsend, 1992-11-24 Valuing the Earth collects more than twenty

classic and recent essays that broaden economic thinking by setting the economy in its proper ecological and ethical context. They vividly demonstrate that contrary to current macroeconomic preoccupations continued growth on a planet of finite resources cannot be physically or economically sustained and is morally undesirable. Among the issues addressed are population growth, resource use, pollution, technology, east and west, energy, and economic growth. Their common theme is the notion popular with classical economists from Malthus to Mill that an economic stationary state is more healthful to life on earth than unlimited growth. A number of essays in the first edition have become classics and have been retained for this edition which adds six new essays. Contributors: Kenneth E Boulding, John Cobb, Herman E Daly, Anne H Ehrlich, Paul R Ehrlich, Nicholas Georgescu Roegen, Garrett Hardin, John P Holdren, M King Hubbert, C S Lewis, E F Schumacher, Gerald Alonzo Smith, T H Tietenberg, Kenneth N Townsend.

The Economic Process Carmine Gorga, 2010. This book transports the reader from the world of mainstream economics in which the object of observation is The Market exchange to a world in which the object of observation is the economic process. Both producer and consumer must respectively be legitimate owners of real wealth and monetary wealth.

The Origin of Wealth Eric D. Beinhocker, 2006. Beinhocker has written this work in order to introduce a broad audience to what he believes is a revolutionary new paradigm in economics and its implications for our understanding of the creation of wealth. He describes how the growing field of complexity theory allows for evolutionary understanding of wealth creation in which business designs co evolve with the evolution of technologies and organizational innovations. In addition to giving his audience a tour of this field of complexity economics he discusses its implications for real world issues of business.

Physis, Biopower, and Biothermodynamics Enrique Leff, 2024-04-16. Building upon the idea that our current environmental question arises from the history of metaphysics which privileged thought about Being or ontology over the conditions of life, this book reinterprets Heraclitus's notion of physis as the fundamental emergent potency of life as the category to be thought by thinkers. In so doing it deconstructs the interpretation offered by Heidegger and so stresses the struggle between the creative force of life and its subjection to the human Logos or meaning. Physis understood as the pre ontological potentiality of life itself thus becomes the cornerstone of a materialist philosophy of life. Following engagements with the work of Nietzsche, Foucault, and Janicaud to explore the significance of human intervention into the realm of life via the will to power, biopower, and the power of rationality respectively, the author explores twentieth century rearticulations of the concept of physis through a range of developments in biothermodynamics thus grounding a new philosophy of life and a new bioeconomics in a revisited biothermodynamics centered on the concept of negentropy. An extensive engagement with the history and development of thought about the generative force of life on Earth. Physis, Biopower, Biothermodynamics, and Bioeconomics. *The Fire of Life* will appeal to scholars of philosophy, social theory, and political theory with interests in environmental thought, political ecology, and questions of sustainability.
