in an agricultural landscape of pastures woods and water Although sieges forages marches and raids are universally considered crucial aspects of old regime warfare no study of operational or maneuver warfare in this period has ever been published Early modern warfare had an operational component which required that soldiers possess or learn many skills grounded in the agricultural economy and this requirement led to an economy of knowledge in which the civil and military sectors exchanged skilled labor Many features of scientific warfare thought to be initiated by Enlightenment reformers were actually implicit in the informal structures of armies of the late 1680 1740 period In this period the Habsburg dynasty maintained an army of more than 100 000 men and hundreds of generals This book might be called a labor history of these generals revealing their regional social and educational backgrounds It also details the careerist dimensions of another neglected aspect of the early modern general s work the creation of military theory Theory arose naturally from staff work and commanded wide interest among both high ranking officers for professional reasons and for its significant impact on service politics

authentic and thus making the whole experience feel more real This book is intended to help those with an interest in the BR Blue TOPS and Sectorisation eras present their layout in a realistic manner using easy to understand sketches and drawings previously unpublished period photographs and source material from the era This book will give the reader ideas to help their N Gauge model railway come to life
