Lodha,R. Mawar,B.S. Rathore,2008-06-01 Like other agro climatic zones of India crops in arid region also suffer enormously due to vagaries of plant diseases Certain agro climatic conditions favor occurrence and development of these diseases which often takes a serious form resulting in heavy crop losses Instances are there when growers have abandoned cultivation of cumin a cash crop which suffered heavily due to wilt and shifted to less remunerative or more irrigation requiring crops Even several folk songs depict the plight of cumin growers Similarly concurrent soil moisture and heat stress favor survival and multiplication of soil borne plant pathogens that causes root rots in many legumes oilseeds and trees As arid lands are brought under irrigation several newer or hitherto unimportant diseases have also become serious With the burgeoning population pressure arid region is now confronted with producing more grain and fodder per unit of land Besides cultivation of drought hardy varieties of crops under improved agronomic practices management of plant diseases is yet another area which can accept this challenge to maximize productivity of arid lands In the present compendium contributions were invited from experienced research workers working in specialized Institutes An effort has been made to provide information on the occurrence of major diseases on principal cereals legumes oilseeds spices horticultural crops trees medicinal plants etc and on factors influencing their development and practical remedial measures to reduce crop losses **Biotic Stress Resistance in Millets** I. K. Das,P. G. Padmaja,2016-08-03 Biotic Stress Resistance in Millets presents an important guide to the disease and pest related challenges of this vital food crop Biotic stresses are one of the major constraints for millet production but newly emerging and forward thinking problems with disease and insect pests are likely to increase as a result of changing weather making this an imperative book on best practices Current strategies are mainly through the development of resistant cultivars as the use of chemicals is cost prohibitive to many of those producing millet in developing countries where it is of most value as a food source This book explores non chemical focused options for improving plant resistance and protecting crop yield This single volume reference will be important for researchers teachers and students in the disciplines of Agricultural Entomology Plant protection Resistance Plant Breeding and Biotechnological pest management Establishes basic concepts of host resistance providing foundational insight Synthesizes past biotic stress resistance research with the latest findings to orient research for future strategies for plant protection Focuses exclusively on host plant resistance on all major diseases and pests of millets Presents data and strategies that are globally applicable as millets gain importance as a health food Millets and Pseudo Cereals Mohar Singh,Salej

Sood,2020-09-20 Millets and Pseudo Cereals is the first comprehensive resource to focus on the potential crop improvements through genetic enhancements The choice of food crop for a region is primarily determined by the conditions of climate and soil Once labelled as orphan crops millets and pseudo cereals are now known as miracle grains due to their adaptation to harsh conditions and high nutritional quality Small millets and pseudo cereals are now seen to occupy special niches through their ability to adapt to challenging conditions These crops have a comparative advantage in marginal lands where they withstand stress conditions and contribute to sustainable production They also contribute to the diversity richness and production stability of agro ecosystems Millets include sorghum pearl millet finger millet foxtail millet proso millet barnyard millet little millet and kodo millet while the other group which are not cereals but consumed as cereals and generally referred as pseudo cereals comprises of grain amaranths buckwheat and chenopods Millets and Pseudo Cereals presents current information on the genetic architecture of important economic traits and the genomic resources for gene enabled breeding This compilation contains information on the global status available germplasm resources nutritional value breeding advancements genomics applications and sustainability of agriculture through millets and pseudo cereals cultivation This book is a valuable resource for those conducting research and exploring new areas for advancing crop genetic understanding Explores the current challenges of pseudo cereal production and how that can be overcome by developing genetic and breeding resources using appropriate germplasm Provides holistic information on millets and pseudo cereals Features global perspectives from an international contributing team of authors Harmonisation of Regulatory Oversight in Biotechnology Safety Assessment of Transgenic Organisms in the Environment, Volume 7 OECD Consensus Documents OECD,2017-12-21 Volume 7 describes the biology of two major crops TOMATO and SORGHUM centres of origin genetics hybridisation production uses ecology and an animal species ATLANTIC SALMON ecology rearing and genetics for wild and farmed forms It contains useful information for biosafety assessment *Blast Disease of Cereal Crops* S. Chandra Nayaka,Rajashekara Hosahatti,Ganesan Prakash,C. Tara Satyavathi,Rajan Sharma,2021-04-21 Blast is an important foliar disease that infects the majority of cereal crops like rice finger millet pearl millet foxtail millet and wheat and thus resulting in a huge economic impact The pathogen is responsible for causing epidemics in many crops and commonly shifts to new hosts Magnaporthe spp is the most prominent cause of blast disease on a broad host range of grasses including rice as well as other species of poaceae family To date 137 members of Poaceae hosting this fungus have been described in Fungal Databases This book provides information on all blast diseases of different cereal crops The pathogen evolves quickly due to its high variability and thus can quickly adapt to new cultivars and cause an epidemic in a given crop Some of the topics covered here include historical perspectives pathogen evolution host range shift cross infectivity and pathogen isolation use of chemicals fungicides genetics and genomics and management of blast disease in different cereal crops with adoption of suitable methodologies In the past two decades there have been significant developments in genomics and proteomics

approaches and there has been substantial and rapid progress in the cloning and mapping of R genes for blast resistance as well as in comparative genomics analysis for resolving delineation of Magnaporthe species that infect both cereals and grass species. Blast disease resistance follows a typical gene-for-gene hypothesis. Identification of new Avr genes and effector molecules from Magnaporthe spp. can be useful to understand the molecular mechanisms involved in the fast evolution of different strains of this fungal genus. Advances in these areas may help to reduce the occurrence of blast disease by the identification of potential R genes for effective deployment. Additionally, this book highlights the importance of blast disease that infects different cereal hosts in the context of climate change and genomics approaches that may potentially help in understanding and applying new concepts and technologies that can make a real impact in sustainable management of blast disease in different cereal crops.

*Frontiers in Fungal Ecology, Diversity and Metabolites* K. R. Sridhar, 2009. Mycology is a frontier area of research in life sciences. Fungi represent one of the three major evolutionary segments along with plants and animals. Fungal multidimensional features with basic and applied value projected their potential beyond routine systematics, diversity, and environmental studies. In view of tremendous developments in the field of Mycology, the present treatise emphasizes various aspects of contemporary issues in mycology. It comprises 22 chapters with emphasis on the fungal ecology, diversity, and metabolites. The topics treated include aquatic ecology, diversity, and phylogeny; mutualism and interactions; potential metabolites; pathology and toxins; fungal infections and prevention; cell permeabilization and advances in monocarboxylate transporters in yeasts with an emphasis on cancer therapy. This volume is of special interest to mycologists as a valuable source of information on the frontier areas of mycology dealing with diversity, ecological amplitudes, methods of assessment, novel metabolites, and bioprospecting avenues.

**Breeding, Biotechnology and Seed Production of Field Crops** Bidhan Roy, 2013-01-15. In modern days, crop improvement is a multidisciplinary division of agriculture. In this book, entitled *Breeding, Biotechnology and Seed Production of Field Crops*, emphasis has been given on principles, methods, and practices in plant breeding, biotechnology in crop improvement, and seed production of field crops. The book has been written for all sections of learners, educators, and staff members of seed industries. Particular importance has been underlined for postgraduate students who specialize in plant breeding and seed science. Each chapter of the book has been designed as per the recommended syllabus of Indian Council of Agricultural Research for the postgraduate students of various Agricultural Universities in our country. This book has been divided into two major parts: i) Principles of crop breeding and ii) Methods and practices of crop improvement and seed production of individual field crops. The book contains a total of 18 chapters. The first three chapters are related to shed light on the basic principles, and remaining chapters deal with methods and practices of individual crops for improvement and seed production. We hope that the book will be ready to lend a hand to the advanced undergraduate students, elective postgraduate students who opted plant breeding, teachers, researchers, and staff members of private seed companies of this field of specialization.
