Peter J Marcotullio,Gordon McGranahan,2012-06-25 Think globally act locally emphasizes the importance of scale in dealing with environmental challenges but not how to factor it in This major new book focuses on the spatial dimensions of urban environmental burdens showing how important it is to take these into account when pursuing environmental justice and good governance whether in the context of the sanitary risks of slum living the pollution of uncontrolled industrialization and motorization or the enormous ecological footprints of affluent urban lifestyles Written by leading experts in the fields of urban development and environmental planning the book reviews the urban environmental shifts that have shaped today's challenges and examines conditions and problems in the urban centres of low middle and high income countries Case studies address such economically diverse cities as Accra New Delhi Mexico City and Manchester while thematic chapters explore issues including water sanitation and transportation The book concludes by exploring and analysing different scales of

governance The editors argue that we should not rely solely on local governance to address local burdens like poor sanitation nor depend only on global governance for global challenges such as greenhouse gas emissions but that scale is crucial in both understanding the problems and devising successful responses Published with UNU IAS and IIED *Medicinal Plants and Environmental Challenges* Mansour Ghorbanpour,Ajit Varma,2017-10-31 This book sheds new light on the role of various environmental factors in regulating the metabolic adaptation of medicinal and aromatic plants Many of the chapters present cutting edge findings on the contamination of medicinal plants through horizontal transfer as well as nanomaterials and the biosynthesis of pharmacologically active compounds In addition the book highlights the impacts of environmental factors e g high and low temperature climate change global warming UV irradiation intense sunlight and shade ozone carbon dioxide drought salinity nutrient deficiency agrochemicals waste heavy metals nanomaterials weeds pests and pathogen infections on medicinal and aromatic plants emphasizing secondary metabolisms In recent years interest has grown in the use of bioactive compounds from natural sources Medicinal and aromatic plants constitute an important part of the natural environment and agro ecosystems and contain a wealth of chemical compounds known as secondary metabolites and including alkaloids glycosides essential oils and other miscellaneous active substances These metabolites help plants cope with environmental and or external stimuli in a rapid reversible and ecologically meaningful manner Additionally environmental factors play a crucial role in regulating the metabolic yield of these biologically active molecules Understanding how medicinal plants respond to environmental perturbations and climate change could open new frontiers in plant production and in agriculture where successive innovation is urgently needed due to the looming challenges in connection with global food security and climate change Readers will discover a range of revealing perspectives and the latest research on this vital topic **Nexus Between Innovations, Environmental Challenges and Labor Mobility** Irfan Ullah,Ashfaq Ahmad Shah,Bilal,Rocky J.
