Fragmentation and the European Patent System Karen Walsh, 2022-08-11 This book provides an in depth study on current perceptions of and responses to fragmentation in the European patent system EPS For decades attempts have been made to address this fragmentation by introducing a unitary patent system The most recent attempt the EU unitary patent system will be the first of its kind It is expected to significantly change the EPS However rather than reducing existing fragmentation it will likely add to it Based on an analysis of the current and forthcoming system the book argues that the inherent nature of fragmentation within the EPS needs to be recognised and suggests that a multifaceted approach is required to respond to it Uniquely it draws on work regarding fragmentation outside of the patent and intellectual property regimes gaining insights from both European law making and the international legal system These insights are used to investigate current responses to fragmentation in the EPS Interpretations of substantive patent law are examined including claim construction *Actavis v Eli Lilly* exceptions to patentability related to uses of human embryos for industrial or commercial purposes *WARF* *Br stle* *ISCC* and products resulting from essentially biological processes *Broccoli* and *Tomatoes II* *G3 19* Attempts towards convergence in these areas have had mixed results and in some instances fragmentation may be necessary However similar techniques to those applied in the international legal system to respond to fragmentation are being used in the EPS and where this is seen it has been to good effect It is argued that these methods should be recognised structured and promoted to make our response to fragmentation more effective *Fragmentation and the European Patent System* will be of interest to academics students and practitioners looking for a new perspective on the EPS

Patents and Global Administrative Law

David Tilt, 2025-07-18 The book applies values and concepts from Global Administrative Law GAL to international patent law demonstrating how limiting technocratic and overly economic language can be Highlighting the administrative foundations of patent law the book argues that in its international form it can be analysed using the same principles of participation transparency and accountability found in national administrative law At the heart of the book is a simple question What does international patent law look like when we approach it through the lens of these values What is being left out when patent law is described predominantly in terms of its technical legal provisions or economic impact The book presents three interrelated contexts EU patent law bilateral trade agreements and the multilateral space Modern patent law is increasingly discussed in terms of national competitiveness or economic potential which reveals only a narrow understanding of how patent law evolves and functions The vocabulary of administrative law provides a fresh way of recasting reframing and re describing the dynamics of international patent law in a way that is more accessible to those outside of a traditional patent scholarship audience A fundamental objective of the book is to challenge the tendency towards technocratic isolation in patent law The book uses accessible vocabulary and represents a new way of conceptualising and understanding how patent law develops on a global scale The book will be of interest to researchers in the field of patent law international law and administrative law
