The Evolution Of Culture In Animals:

The Evolution of Culture in Animals John Tyler Bonner, 2018-06-05 Animals do have culture maintains this delightfully illustrated and provocative book which cites a number of fascinating instances of animal communication and learning John Bonner traces the origins of culture back to the early biological evolution of animals and provides examples of five categories of behavior leading to nonhuman culture physical dexterity relations with other species auditory communication within a species geographic locations and inventions or innovations Defining culture as the transmission of information by behavioral rather than genetical means he demonstrates the continuum between the traits we find in animals and those we often consider uniquely human

The Evolution of Culture Stefan Linquist, 2017-03-02 Recent years have seen a transformation in thinking about the nature of culture Rather than viewing culture in opposition to biology a growing number of researchers now regard culture as subject to evolutionary processes Recent developments in this field have shifted some of the traditional academic fault lines Alliances are forming between researchers trained in anthropology evolutionary biology psychology and philosophy Meanwhile several distinct schools of thought have appeared which differ in their vision of what an evolutionary approach to culture should look like This volume contains some of the most influential publications on these subjects from the past few decades A theoretical background chapter and critical introduction identify the core issues at stake in the new study of cultural evolution These chapters are followed by sections on each of the four dominant approaches the phylogenetic approach memetics dual inheritance theory and niche construction Following these are two chapters on closely related topics the psychological mechanisms of culture and the existence of culture in non human animals Overall this volume provides an up to date overview of some of the most exciting trends in contemporary evolutionary thought

A Different Kind of Animal Robert Boyd, 2017-10-23 How our ability to learn from each other has been the essential ingredient to our remarkable success as a species Human beings are a very different kind of animal We have evolved to become the most dominant species on Earth We have a larger geographical range and process more energy than any other creature alive This astonishing transformation is usually explained in terms of cognitive ability people are just smarter than all the rest But in this compelling book Robert Boyd argues that culture our ability to learn from each other has been the essential ingredient of our remarkable success A Different Kind of Animal demonstrates that while people are smart we are not nearly smart enough to have solved the vast array of problems that confronted our species as it spread across the globe Over the past two million years culture has evolved to enable human populations to accumulate superb local adaptations that no individual could ever have invented on their own It has also made possible the evolution of social norms that allow humans to make common cause with large groups of unrelated individuals a kind of society not seen anywhere else in nature This unique combination of cultural adaptation and large scale cooperation has transformed our species and assured our survival making us the different kind of animal we are today Based on the Tanner Lectures delivered at

Princeton University A Different Kind of Animal features challenging responses by biologist H Allen Orr philosopher Kim Sterelny economist Paul Seabright and evolutionary anthropologist Ruth Mace as well as an introduction by Stephen Macedo

Evolution, Culture, and the Human Mind Mark Schaller, Ara Norenzayan, Steven J. Heine, Toshio Yamagishi, Tatsuya Kameda, 2011-03-17 Evolution Culture and the Human Mind is the first scholarly book to integrate evolutionary and cultural perspectives on human psychology The contributors include world renowned evolutionary cultural social and cognitive psychologists These chapters reveal many novel insights linking human evolution to both human cognition and human culture including the evolutionary origins of cross cultural differences *The Evolution of Cognition* Cecilia M. Heyes, Ludwig Huber, 2000 In the last decade evolutionary psychology has come to refer exclusively to research on human mentality and behavior motivated by a nativist interpretation of how evolution operates This book encompasses the behavior and mentality of nonhuman as well as human animals and a full range of evolutionary approaches Rather than a collection by and for the like minded it is a debate about how evolutionary processes have shaped cognition The debate is divided into five sections Orientations on the phylogenetic ecological and psychological comparative approaches to the evolution of cognition Categorization on how various animals parse their environments how they represent objects and events and the relations among them Causality on whether and in what ways nonhuman animals represent cause and effect relationships Consciousness on whether it makes sense to talk about the evolution of consciousness and whether the phenomenon can be investigated empirically in nonhuman animals and Culture on the cognitive requirements for nongenetic transmission of information and the evolutionary consequences of such cultural exchange Contributors Bernard Balleine Patrick Bateson Michael J Beran M E Bitterman Robert Boyd Nicola Clayton Juan Delius Anthony Dickinson Robin Dunbar D P Griffiths Bernd Heinrich Cecilia Heyes William A Hillix Ludwig Huber Nicholas Humphrey Masako Jitsumori Louis Lefebvre Nicholas Mackintosh Euan M Macphail Peter Richerson Duane M Rumbaugh Sara Shettleworth Martina Siemann Kim Sterelny Michael Tomasello Laura Weiser Alexandra Wells Carolyn Wilczynski David Sloan Wilson *The Cultural Animal* Roy F. Baumeister, 2005-02-10 This book provides a coherent explanation of human nature which is to say how people think act and feel what they want and how they interact with each other The central idea is that the human psyche was designed by evolution to enable people to create and sustain culture *The Oxford Handbook of Comparative Evolutionary Psychology* Jennifer Vonk, Todd K. Shackelford, 2012-02-13 This volume brings together leading experts in comparative and evolutionary psychology Top scholars summarize the histories and possible futures of their disciplines and the contribution of each to illuminating the evolutionary forces that give rise to unique abilities in distantly and closely related species Culture Evolves Andrew Whiten, 2012 Culture broadly defined as all we learn from others that endures for long enough to generate customs and traditions shapes vast swathes of our lives and has allowed the human species to dominate the planet in an evolutionarily unique way Culture and cultural evolution are uniquely significant phenomena in evolutionary biology they are

products of biological evolution yet they supplement genetic transmission with social transmission thus achieving a certain independence from natural selection However cultural evolution nevertheless expresses key Darwinian processes itself and also interacts with genetic evolution Just how culture fits into the grander framework of evolution is a big issue though yet one that has received relatively little scientific attention compared to for example genetic evolution Our capacity for culture appears so distinctive among animals that it is often thought to separate we cultural beings from the rest of nature and the Darwinian forces that shape it Culture Evolves presents a different view arising from the recent discoveries of a diverse range of disciplines that focus on evolutionary continuities First recent studies reveal that learning from others and the transmission of traditions are more widespread and significant across the animal kingdom than earlier recognized helping us understand the evolutionary roots of culture Second archaeological discoveries have pushed back the origins of human culture to much more ancient times than traditionally thought These developments together suggest important continuities between animal and human culture A third new array of discoveries concerns the later diversification of human cultures where the operations of Darwinian like cultural evolutionary processes are increasingly identified Finally surprising discoveries have been made about the imprint of cultural evolution in children s predisposition to acquire culture The result of a major interdisciplinary meeting held by the Royal Society and the British Academy this book presents the work of leading experts from the fields of ethology behavioural ecology primatology comparative psychology archaeology anthropology evolutionary biology and developmental psychology

Wimsatt, 2014 Empirical and philosophical perspectives on scaffolding that highlight the role of temporal and temporary resources in development across concepts of culture cognition and evolution Scaffolding is a concept that is becoming widely used across disciplines This book investigates common threads in diverse applications of scaffolding including theoretical biology cognitive science social theory science and technology studies and human development Despite its widespread use the concept of scaffolding is often given short shrift the contributors to this volume from a range of disciplines offer a more fully developed analysis of scaffolding that highlights the role of temporal and temporary resources in development broadly conceived across concepts of culture cognition and evolution The book emphasizes reproduction repeated assembly and entrenchment of heterogeneous relations parts and processes as a complement to neo Darwinism in the developmentalist tradition of conceptualizing evolutionary change After describing an integration of theoretical perspectives that can accommodate different levels of analysis and connect various methodologies the book discusses multilevel organization differences and reciprocity between individuals and institutions as units of analysis and perspectives on development that span brains careers corporations and cultural cycles Contributors Colin Allen Linnda R Caporael James Evans Elihu M Gerson Simona Ginsburg James R Griesemer Christophe Heintz Eva Jablonka Sanjay Joshi Shu Chen Li Pamela Lyon Sergio F Martinez Christopher J May Johann Peter Murmann Stuart A Newman Jeffrey C

Lifeworlds

Michael Jackson, 2012-11-22 Michael Jackson's Lifeworlds is a masterful collection of essays the culmination of a career aimed at understanding the relationship between anthropology and philosophy Seeking the truths that are found in the interstices between examiner and examined world and word and body and mind and taking inspiration from James Dewey Arendt Husserl Sartre Camus and especially Merleau Ponty Jackson creates in these chapters a distinctive anthropological pursuit of existential inquiry More important he buttresses this philosophical approach with committed empirical research Traveling from the Kuranko in Sierra Leone to the Maori in New Zealand to the Warlpiri in Australia Jackson argues that anthropological subjects continually negotiate imaginatively practically and politically their relations with the forces surrounding them and the resources they find in themselves or in solidarity with significant others At the same time that they mirror facets of the larger world they also help shape it Stitching the themes peoples and locales of these essays into a sustained argument for a philosophical anthropology that focuses on the places between Jackson offers a pragmatic
