[The Temptations of Evolutionary Ethics](#) Paul Lawrence Farber, 1994 Evolutionary theory tells us about our biological past can it also guide us to a moral future Paul Farber's compelling book describes a century old philosophical hope held by many biologists anthropologists psychologists and social thinkers that universal ethical and social imperatives are built into human nature and can be discovered through knowledge of evolutionary theory Farber describes three upsurges of enthusiasm for evolutionary ethics The first came in the early years of mid nineteenth century evolutionary theories the second in the 1920s and 30s in the years after the cultural catastrophe of World War I and the third arrived with the recent grand claims of sociobiology to offer a sound biological basis for a theory of human culture

Unlike many who have written on evolutionary ethics Farber considers the responses made by philosophers over the years. He maintains that their devastating criticisms have been forgotten thus the history of evolutionary ethics is essentially one of oft repeated philosophical mistakes. Historians, scientists, social scientists and anyone concerned about the elusive basis of selflessness, altruism and morality will welcome Farber's enlightening book [Rebels Within the Ranks](#) Katherine Pandora, 2002-08-22. During the 1930s psychologists Gordon Allport, Gardner Murphy and Lois Barclay Murphy emerged from the fields of social and personality psychology to challenge the neo-behavioralist status quo in American social science. Willing to experiment with the idea of science itself, these rebels within the ranks contested ascendent conventions that cast the study of human life in the image of classical physics. Drawing on the intellectual, social and political legacies of William James, radically empiricist philosophy and radical Social Gospel theology, these three psychologists developed critiques of scientific authority and democratic reality as they worked at the crossroads of the social and the personal in New Deal America. Appropriating models from natural history, they argued for the significance of individuality, contextuality and diversity as scientific concepts as they explored what they envisioned as the nature of democracy and the democracy of nature.

**For the Betterment of the Race** S. Kühl, 2013-08-07. Racism, race hygiene, eugenics and their histories have for a long time been studied in terms of individual countries, whether genocidal ideology in Nazi Germany or scientific racial theories in the United States. As this study demonstrates, however, eugenic racial policy and scientific racism alike had a strongly international dimension. Concepts such as a Racial Confederation of European Peoples or a blonde internationalism marked the thinking and the actions of many eugenicists, undergirding transnational networks that persist even today. Author Stefan Kühl provides here a historical foundation for this phenomenon, contextualizing the international eugenics movement in relation to National Socialist race policies and showing how intensively eugenicists worked to disseminate their beliefs throughout the world.

**Defending the Master Race** Jonathan Spiro, 2008-12. A historical rediscovery of one of the heroic founders of the conservation movement who was also one of the most infamous racists in American history.

**Women in the Biological Sciences** Carol A. Biermann, Louise S. Grinstein, Rose K. Rose, 1997-07-16. Biology textbooks and books on the history of science generally give a limited picture of the roles women have played in the growth and development of the biological sciences, mentioning primarily the Nobel laureates. This book provides a definitive archival collection of essays on a larger group of women, profiling both their work and their lives. The volume includes 65 representative women from different countries and eras and from as many branches of biological investigation as possible. In addition to biographical information and an evaluation of the woman's career and significance, each entry provides a full bibliographic listing of works by and about the subject. The volume includes entries on women who have gained recognition through attainment of advanced degrees despite familial and societal pressures, innovative research results, influence exerted in teaching and guidance of students, active participation and leadership in professional societies, extensive scholarly publication, participation on journal

editorial boards extensive field experience and influence on public and political scientific policymaking A woman was considered eligible for inclusion if she met several of these criteria Providing a historical perspective the book is limited to women who were born before 1930 or are deceased
