The Failed Back Syndrome Etiology And Therapy:

The Failed Back Syndrome Harold A. Wilkinson, 2012-12-06 In the eight years since the first edition of this book several marvelous technical advances have become available clinically for the care of patients with failed back syndromes. High resolution MRI scans, three dimensional CT scans and percutaneous discectomy are notable technological advances. Overall however the problem of the failed back remains as complex and poorly understood as ever. A discouraging amount of what we claim to be our knowledge of the pathophysiology and appropriate therapy for the complex of disorders that constitute the failed back syndrome remains unvalidated by careful scientific study. The discussions of pathophysiology, diagnosis and therapy put forth in the first edition for the most part remain equally as valid or as controversial as they were eight years ago. The first edition was well received by numerous physicians and other health care givers from a variety of disciplines and through them the book seems to have contributed usefully to many of those who suffer the unpleasant maladies of the failed back. I hope this second edition will likewise prove to be a positive contribution. The timing of the publication of this second edition is significant in several ways in the context of the current medicolegal climate in the United States.

Neurosurgical Management of Pain Richard B. North, Robert M. Levy, 2012-12-06 Neurosurgical Management of Pain presents the full range of procedures for the management of chronic intractable pain. Chapters on the latest neuroaugmentative advances utilizing electrical stimulation and implantable drug infusion systems are included as well as a useful section providing algorithms and guidelines for evaluation and treatment of specific pain syndromes. Over 100 exquisite line drawings and photographs augment the text. For both the trainee and experienced neurosurgeon this volume is invaluable for acquiring the critical judgement and clinical skills necessary to apply these procedures.

Cousins and Bridenbaugh's Neural Blockade in Clinical Anesthesia and Pain Medicine Michael J. Cousins, 2012-03-29 This comprehensive authoritative text presents the scientific foundations and clinical practice of neural blockade in both regional anesthesia and the management of pain. The descriptions and illustrations of pain mechanisms are considered classic examples. The Fourth Edition has been refined for clarity and flows logically from principles and pharmacology to techniques for each anatomic region to applications. This edition has two new co editors and several new chapters on topics including neurologic complications, neural blockade for surgery, treatment of pain in older people and complications in pain medicine. A companion Website will offer the fully searchable text and an image bank.

Advances in Stereotactic and Functional Neurosurgery 11 Björn A. Meyerson, Christoph Ostertag, 2012-12-06 This volume contains selected contributions from the XIth Meeting of the European Society for Stereotactic and Functional Neurosurgery held in Antalya, Turkey, in September 1994. Most of the papers deal with the many therapeutic and technical advancements made in this field of neurosurgery. The emergence of new stereotactic

methodologies such as frameless stereotaxy and other forms of neuronavigation have become an indispensable tool for all types of neurosurgical operations. An increasing number of young neurosurgeons takes an interest in the neurosurgical approaches to the treatment of movement disorders, chronic pain and epilepsy. This is a clear sign of the growing awareness of the long neglected fact that these neurosurgical treatments can be offered to large patient populations. Neurotransplantation as a novel treatment of Parkinson's disease has paved the way for the application of this technology for other indications. The pioneering work performed by the late Edward Hitchcock is reviewed here. There is a renewed interest in pallidotomy for dealing with certain forms of Parkinson's disease and certain aspects of this operation are discussed in another paper. Progress in the neurosurgical treatment of pain is dealt with by contributions on refined techniques of percutaneous cordotomy, DREZ operations and critical evaluations of spinal cord stimulation. A novel approach is a report on the experiences of treating cancer pain by intraspinal implantation of chromaffin cells. Several contributions cover the important issues of novel techniques for the study of neural dysfunction, peroperative monitoring with PET, microrecording, magnetoencephalography and other techniques.
