Science, God, and Nature in Victorian Canada Carl Berger,1983-12-15 Professor Berger aims in this book to explore the rise expression and relative decline of the idea of natural history in Canada during the age of Victoria Science particularly natural science was then accessible to the general public in a way scarcely imaginable today Natural history societies were set up in a number of cities and provided a focus for the descriptive and collecting activities of amateurs and incipient professionals These societies acted as social clubs and vehicles for self improvement as well as providing excellent training for the amateur scientist The Baconian assumptions that inspired the Victorian collectors and scientists were one of the major victims of the Darwinian revolution and their demise brought about the gradual decline of the natural history

societies Professor Berger considers also the sense of wonder and reverence with which Victorian Canadians like their British contemporaries looked at the varieties and delights of nature The British tradition of natural theology had a great impact on the pursuit of science in Victorian Canada leading naturalists and poets alike to seek in the uncharted flora and fauna of their new land the handiwork of a benevolent God The author examines the impact of the discoveries of Darwin on this tradition and on the relations between science and religion as the creator and the act of creation became more and more distant in time and more tenuously connected to the world of nature around us His study provides many rich insights into the practice and theory of natural history in an age when even a veteran politician could look back and recall with understanding and in detail the world of nature in the countryside of his youth [The British Arboretum](#) Paul A Elliott,2015-07-22 This study explores the science and culture of nineteenth century British arboreta These were fostered by a variety of factors global trade and exploration popularity of collecting significance to the British economy and society developments in science changes in landscape gardening aesthetics and agricultural and horticultural improvement **Wild Animal Skins in Victorian Britain** Ann C. Colley,2016-02-11 What did the 13th Earl of Derby his twenty two year old niece Manchester s Belle Vue Zoo and even some ordinary laborers all have in common All were avid collectors and exhibitors of exotic and frequently unruly specimens In her study of Britain s craze for natural history collecting Ann C Colley makes extensive use of archival materials to examine the challenges preoccupations and disordered circumstances that attended the amassing of specimens from faraway places only vaguely known to the British public As scientific institutions sent collectors to bring back exotic animals and birds for study and classification by anatomists and zoologist it soon became apparent that collecting skins rather than live animals or birds was a relatively more manageable endeavor Colley looks at the collecting exhibiting and portraying of animal skins to show their importance as trophies of empire and representations of identity While a zoo might display skins to promote and glorify Britain s colonial achievements Colley suggests that the reality of collecting was characterized more by chaos than imperial order For example Edward Lear s commissioned illustrations of the Earl of Derby s extensive collection challenge the colonial s or collector s commanding gaze while the Victorian public demonstrated a yearning to connect with their own wildness by touching the skins of animals Colley concludes with a discussion of the metaphorical uses of wild skins by Gerard Manley Hopkins and other writers exploring the idea of skin as a locus of memory and touch where one s past can be traced in the same way that nineteenth century mapmakers charted a landscape Throughout the book Colley calls upon recent theories about the nature and function of skin and touch to structure her discussion of the Victorian fascination with wild animal skins **The Environmental Imagination** Lawrence Buell,1996-09-01 With Thoreau s Walden as a touchstone Buell offers an account of environmental perception the place of nature in the history of Western thought and the consequences for literary scholarship of attempting to imagine a more ecocentric way of being In doing so he provides a profound rethinking of our literary and cultural reflections on nature
