book critically reviews relevant notions from geography sociology and public administration It also identifies good practices across Europe Throughout theories are complemented with concrete examples and proposals are made on how to tackle demographic shrinkage in European cities and villages from attempts to attract new residents to the countryside to innovative ways to guarantee public services In the end the authors conclude that solving the challenges caused by population decline require novel ways of thinking and provide answers to such future oriented questions as how to ensure the quality of life in an environment that is inhabited by fewer and older people what investments are needed and which actors should be involved *Managing Population Decline in Europe s Urban and Rural Areas* offers detailed coverage of an underestimated and complex governance issue that asks for solutions in which citizens have to play an important role It concludes that shrinkage requires a rethink of the specific tasks and roles of government and presents a way forward based on initiatives currently underway throughout Europe The book will be a valuable resource for population policy makers as well as students and researchers interested in human geography urban planning rural development European studies public administration and other social sciences     The Cambridge Revival of Political Economy Nuno Ornelas Martins,2013-10-23

The marginalist revolution of the late nineteenth century consolidated what Karl Marx and Piero Sraffa called vulgar economy bringing with it an emphasis on a scarcity theory that replaced the classical surplus theory However the classical political economy of Adam Smith and David Ricardo has been revived within the Cambridge economic tradition This book looks at how different branches of the Cambridge economic tradition have focused on various aspects of this revival over time The author shows that classical political economy is distinct from vulgar political economy in terms of its economic social and ethical theory with each difference resting on an issue of ontology Structured in three parts the book examines the central contested aspects of these theories namely the nature of value the relationship between human beings and social structure and the nature of human wellbeing *The Cambridge Revival of Political Economy* will be relevant to students and researchers within the fields of political economy history of economic thought politics and philosophy     The Environment and Society Reader Richard Scott Frey,2001 This is a comprehensive introduction to the issues associated with environmental problems The author challenges readers to ask themselves questions regarding the complexity and distribution of environmental problems as well as human impacts on and responses to these problems Readers are also encouraged to examine the scope and nature of environmental problems Geared toward those interested in the relationship between the environment and society     World Review of Nutrition and Dietetics G. H. Bourne,1976-10-15     Principles of Environmental Economics Ahmed M. Hussen,2004 This text offers a systematic exposition of environmental and natural resource economics It considers a variety of real world examples to illustrate the policy relevance and implications of key economic and ecological concepts     *Humboldt Journal of Social Relations* ,1981     **Environmental Security** Rita Floyd,Richard Matthew,2013-01-04 Economic development population growth and poor resource management have

combined to alter the planet's natural environment in dramatic and alarming ways. For over twenty years, considerable research and debate have focused on clarifying or disputing linkages between various forms of environmental change and various understandings of security. At one extreme lie sceptics who contend that the linkages are weak or even non-existent; they are simply attempts to harness the resources of the security arena to an environmental agenda. At the other extreme lie those who believe that these linkages may be the most important drivers of security in the 21st century; indeed, the very future of humankind may be at stake. This book brings together contributions from a range of disciplines to present a critical and comprehensive overview of the research and debate linking environmental factors to security. It provides a framework for representing and understanding key areas of intellectual convergence and disagreement, clarifying achievements of the research as well as identifying its weaknesses and gaps. Part I explores the various ways environmental change and security have been linked and provides principal critiques of this linkage. Part II explores the linkage through analysis of key issue areas such as climate change, energy, water, food, population, and development. Finally, the book concludes with a discussion of the value of this subfield of security studies and with some ideas about the questions it might profitably address in the future. This volume is the first to provide a comprehensive overview of the field. With contributions from around the world, it combines established and emerging scholars to offer a platform for the next wave of research and policy activity. It is invaluable for both students and practitioners interested in international relations, environment studies, and human geography.

**The Concept of Utopia** Ruth Levitas, 2010. Originally published London: Philip Allan, 1990.

**Conflict and the Environment** N.P. Gleditsch, 2013-04-17. Nils Petter Gleditsch, International Peace Research Institute Oslo (PRIO), Department of Sociology and Political Science, Norwegian University of Science and Technology, Trondheim. This book could hardly have happened but for the end of the Cold War. The decline of the East-West conflict has opened up the arena for increased attention to other lines of conflict in Europe and at the global level. Environmental disruption, not a new phenomenon by any means, is a chief beneficiary of the shift in priorities in the public debate. The Scientific and Environmental Affairs Division of NATO has moved with the times and has defined environmental security as one of its priority areas for cooperation with Central and Eastern Europe and countries of the former Soviet Union. This book is the main output of an Advanced Research Workshop (ARW) held in Bolkesjø, Norway, 12-16 June 1996. I would like to acknowledge the personal support of L. Veiga da Cunha, Director of the Priority Area on Environmental Security. Research on these issues is now very much a collaborative effort across former lines of division in Europe. NATO encourages, indeed requires, that this be reflected in the composition of the participants as well as the organizing committee. This meeting was organized by a group of five people from five different countries: Lothar Brock (Germany), Nils Petter Gleditsch (Norway), Thomas Homer-Dixon (Canada), Renat Perelet (Russia), and Evan Vlachos (USA).
