Power of Yielding Patricia Hofer, 2016-06-06 For a Christian Scientist to be born again in the way Patricia Hofer was would probably require nothing less than a visit from the Lord himself And that is what happened Raised in the belief that Christianity was a healing science imagine her wonder when she smashed headlong into its deepest mysticism Since that remarkable day Hofer has read widely searching for similar spiritual awakenings in the lives of other Christians Her narrative includes some of this research but more than that it becomes a mental pilgrimage where she peels back the layers of a personal relationship with the Lord that has warmed her heart for almost twenty years If you are a serious Christian who needs to discover again the power and the simplicity of Christ or a thinking person who wants to deepen your spiritual view of the world you will find your journey through these pages rewarding and helpful

Seven Challenges for the Science of Animal Minds Mike Dacey, 2025-01-28 The scientific study of animal minds is difficult This book examines the most significant reasons this is so seven challenges for the science to overcome Researchers are aware of these challenges but few take any of them head on and none address them collectively Despite this focus on challenges the book's attitude is optimistic rather than critical these are challenges for the science not challenges to the science Researchers have made substantial progress as things are But taking the challenges head on can help build an even stronger more vibrant science The seven challenges are 1 underdetermination of theory by data 2 anthropomorphic bias 3 the difficulty of modeling cognitive processes 4 integrating across disciplines 5 ecological validity 6 small sample sizes and 7 measuring consciousness For each the book suggests rethinking the challenge and reorienting our attempts to address it These approaches are novel general ways of thinking that will help researchers work through the challenges and perhaps find solutions appropriate to their own research Each of the main chapters takes on one challenge Each also includes an empirical case study from social reasoning in chimpanzees to foraging in honeybees to consciousness in octopuses Along the way a big picture framework emerges for drawing conclusions about animal minds based on experimental evidence In this framework the role of any individual piece of the science is limited any individual experiment model claim or argument can only tell us so much When we are appropriately modest about each piece conclusions about animal minds must be arrived at by holistically considering all the evidence we can get This is a work in the philosophy of science but it is written to be accessible to any philosopher interested in empirical issues relating to the mind researchers in any of the related sciences including psychology neuroscience ethology and evolutionary biology as well as intermediate to advanced students

Persson, 2022 Despite its ubiquity few outside the corridors of power are concerned with policy its meaning and purpose It is not uncommon that policies are in various ways dysfunctional and characterised by magical thinking rather than fact and reason If they do function what signifies good policy If they do not why are they still increasing in numbers Departing from well known facts of human social evolution this book explains why flawed policy tends to generate a host of problems and how this is tied to political inertia and ultimately also to the UN's Sustainability Agenda This is in jeopardy because of politicians somewhat magical policy making Given that some of the

challenges the World is facing can be resolved by well designed policies a proposal is made how policy makers must think when creating policy in line with human nature
